Re: Installation guidance on the AK TAG Reader
        FCC ID: QHKAKTAGREADER

Gentlemen,

TAGSYS RFID products are not sold to general public. Though the AK Reader Kit is marketed as a RF ID discovery Kit, it is sold directly to professional end customers: manufacturing companies' warehouses & production lines, public libraries, retale stores, industrial laundries, Information Technology companies. Installation or integration is done going through TAGSYS professional advice on site or following customer's personnel training.

There is no particular components installation requirement as far as the reader is concerned: antenna is located in an enclosure and wiring to mains and host PC is straight forward.

Professional installation is mandatory in order to insure optimum performance as far as Radio Label reading is concerned. TAGSYS as a proven worldwide track record in achieving very high reliability reading rate. In order to continuously achieve this goal, we always provide professional guidance and on site service to install our equipment, whatever product is sold.

Regards,
