## **Document revision history**

The following section lists documentation changes in  $ONECELL^{\textcircled{\$}}$  Installation Guide, v5.5 (M0304AC).

### **Revision 5.5.01 (July 8, 2021)**

• Initial document release

### **About this document**

This document provides the procedures for installing and configuring the Baseband Controller and Radio Points.

### **Audience**

This document is written for computer hardware installers and administrators, network architects and business planners who are responsible for the planning and design of the CommScope ONECELL deployment environment.

### **Purpose**

This guide provides the information necessary for installing the ONECELL hardware in the operator's network.

### What you need to know

The reader should have a basic understanding of:

- Data networks
- LTE technology
- General telecommunications practices

#### **Customer documentation**

The following table lists available documents in the ONECELL documentation suite.

**Table 1. Customer documentation** 

Title	Contents
ONECELL® Installation Guide, v5.5 (M0304AC)	Includes detailed installation instructions for Baseband Controller and Radio Points hardware.
ONECELL® Feature Guide, v5.5 (M0304AE)	Contains a description of anchor features for the current and previous releases, and a system overview, including CommScope provided components and required components from other vendors.
ONECELL® Network Planning Guide, v5.5 (M0304AF)	Describes main components of the ONECELL system, high-level view of hardware components, how do you engineer an in-building system, how do you determine Radio Points locations, and how to design in-building systems. Contains best practices for deployment, including when to use clustering, and how to manage capacity.
ONECELL® RP5200 Installation Guide, v5.5 (M0304AG)	Includes detailed installation instructions for Baseband Controller and Radio Points hardware.
OM and KPI Reference for ONECELL® Devices, v5.5 (M0304AK)	Describes the operational measurements and key performance indicators for ONECELL devices.
ONECELL® Troubleshooting, v5.5 (M0304AJ)	Covers common troubleshooting scenarios in deployed devices and troubleshooting methods.
ONECELL® Administration, v5.5 (M0304AH)	Describes how to operate, maintain and manage ONECELL devices using the Baseband Controller's Web UI.
ONECELL® Device Alarm Reference (M0304AL)	Includes ONECELL device alarm information.

### **Conventions**

This guide uses the following text conventions, as applicable.

**Table 2. Conventions** 

Convention	Description
Syntax symbols	
<>	Enclose a required parameter or set of parameters. For example:  >band-class <class> <class> is a required parameter.</class></class>
[]	Enclose an optional parameter or set of parameters. For example:  >activate image <version> [reboot] [reboot] is an optional parameter.</version>
	Separates items on a list of parameters, only one of which can be used. For example:  >channel-included <yes no> A valid command is: &gt;channel-included yes</yes no>
Font usage	
Bold input font	Indicates text that must be entered exactly as shown. For example: Enter ping 192.23.10.12.
Italic input font	Indicates a variable parameter for which you must provide an actual value. For example:  >authentication key <aukey> <aukey> is a variable parameter.  A valid command is:  &gt;authentication key 9782503000</aukey></aukey>
Plain output font	Indicates system output in a command line or system-generated file. For example:  IP address 192.23.10.12 is alive.
Italic output font	Indicates a variable in system output in a command line or system-generated file. For example:  Installation of release <release> is complete.</release>

**Table 2. Conventions** 

Convention	Description	
Plain italic font	Indicates file names, directory paths, book titles, chapter titles, and user accounts.	
Bold font	Indicates text that appears on screen exactly as shown, for example, names of screens, names of buttons, items on menus, and items on pull down lists.	
blue text	Indicates a hypertext link.	
Other conventions		
>	Indicates graphical user interface (GUI) menu path. For example:  Select <b>Edit &gt; Add Network</b> to open the Add Network screen.	

### Notes, cautions, and warnings

Notes provide additional information about the subject text.

Cautions indicate that procedures, if performed incorrectly, can cause equipment damage or data loss.

Warnings indicate that procedures, if performed incorrectly, can harm you.

# Part I: Overview and preparation

**Chapter 1 CommScope ONECELL® overview** 

**Chapter 2** Preparing to install the **ONECELL** system

# **CommScope ONECELL® overview**

This chapter contains a high level overview of the ONECELL deployment and the ONECELL components installed in the ONECELL system.

Overview	1-2
CommScope ONECELL system	1-2
ONECELL hardware components	1-3

#### **Overview**

ONECELL is a revolutionary wireless system that can deliver the ultimate in wireless performance.

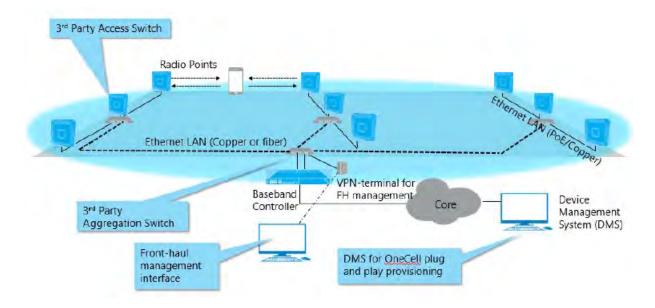

- It eliminates cell borders and handovers
- It can cover a large area with consistent user experience without any significant interference
- It can take advantage of multiple distributed radio points to deliver a stronger signal on both the downlink and the uplink
- It can deliver greater capacity through distributed (multi-user and single-user) MIMO and Coordinated Multipoint (CoMP)
- It has the flexibility to neutralize macro interference in co-channel small cell deployments
- It can be used to deliver unprecedented levels of capacity to hot spot areas by deploying radio points with overlapping coverage and enabling multi- user MIMO

In addition to these important benefits in user experience and data capacity, ONECELL provides superior economics and investment protection, ease of deployment and support for multi-operator deployments.

### **CommScope ONECELL system**

ONECELL is an in-building, enterprise solution for LTE that provides an in-building consistent signal. It operates as a wireless network with a single cell, called a Baseband Controller, over distributed Radio Points. Network operators benefit from the ONECELL because they reduce the load on their infrastructure.

Figure 1-1. ONECELL solution

### **ONECELL** hardware components

The ONECELL hardware consists of the following components:

- Baseband Controller
  - Baseband Controller Chassis
  - Baseband Controller Module
  - Power/Fan Unit (PFU)

#### **Baseband Controller physical ports**

The following ports are on the front panel of the Baseband Controller Module. Table 1-1 shows the port assignments. In addition, there is a connector used for the GPS antenna cable.

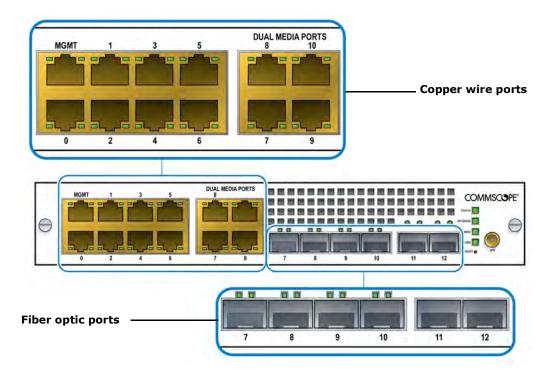

For more detailed BC port information, see  $ONECELL^{\textcircled{R}}$  Network Planning Guide, v5.5 (M0304AF).

 Table 1-1.
 Baseband Controller physical port assignments

Port Assignment	Network	Port Speed	Media Type	Description
MGMT	Local Management	1 Gbps	RJ45	<b>External Interface</b> to access the WebGUI on the Baseband Controller.
0	Not used	1 Gbps	RJ45	Not used
1-6	IQ Data	1 Gbps	RJ45	Fronthaul IQ Data Traffic between the Baseband Controller and Radio Points via an Ethernet switch on copper (RJ45) port.
7	Boundary Clock	1 Gbps	Dual Media RJ45 or SFP	<b>Boundary Clock Input</b> of IEEE 1588 PTP Timing signal via dual media port.
8	IPsec	1 Gbps	Dual Media RJ45 or SFP	Backhaul Traffic (S1 and OAM Interfaces) via dual media port. VLAN tags are configurable in Dual IPsec mode to separate different traffic streams on the same port.
9	X2 and Redundancy	1 Gbps	Dual Media RJ45 or SFP	Fronthaul Traffic for X2 and Redundancy Cluster data via dual media port.
10	RP Management and Timing	1 Gbps	Dual Media RJ45 or SFP	Fronthaul Traffic for IEEE 1588 PTP timing and SOAP/XML control data via dual media port. Timing and OAM data traffic between Baseband Controller and Radio Points through an Ethernet switch(s)
11	IQ Data	10 Gbps	SFP+	Fronthaul IQ Data Traffic between the Baseband Controller and Radio Points via Ethernet switch on Fiber (SFP) port.
12	Not used	10 Gbps	SFP+	Not used

**Figure 1-2.** Baseband Controller ports

## **Preparing to install the ONECELL system**

This section has the steps to complete before starting the ONECELL installation.

Overview	2-2
Before installing the ONECELL components	2-2

#### **Overview**

This document describes the ONECELL installation and includes:

- Chapter 3, Baseband Controller installation
- Chapter 4, RP5100i installation
- Chapter 5, RP5100r installation
- Chapter 6, RP2000 Installation
- Chapter 7, RP2100 Installation

### **Before installing the ONECELL components**

Before installing the ONECELL components, the system integrator must plan the network for the topology that will be deployed. See *OneCell Network Planning Guide* (913023).

CommScope recommends that cables and switches be in place before installing the ONECELL components. See Appendix E, Cable installation and power separation guidelines for more information.

### **Commissioning the ONECELL network**

To bring your ONECELL system up, you'll need to commission the system by configuring it. The commissioning procedures are dependent on the site installation. Contact your CommScope representative for your commissioning procedures.

# Part II: ONECELL component installation

**Chapter 3 Baseband Controller installation** 

**Chapter 4 RP5100i installation** 

**Chapter 5 RP5100r installation** 

**Chapter 6 RP2000 Installation** 

**Chapter 7 RP2100 Installation** 

### **Baseband Controller installation**

This chapter contains the Baseband Controller installation procedures, including chassis installation into a rack, Baseband Controller Module and Power/Fan Unit installation into the Baseband Controller Chassis and the cables required for a basic installation.

Preparing for Baseband Controller installation	3-2
Installing the Baseband Controller into a rack	3-2

### **Preparing for Baseband Controller installation**

Open the shipping box. It should have the components for one complete Baseband Controller Module:

- Baseband Controller Chassis including four mounting screws
- Baseband Controller Module
- Power/Fan Unit (PFU)

The Baseband Controller is 1U high. Be sure there is enough room for the Baseband Controller in the rack.

If you are installing a ONECELL system with GPS timing, you will need a coaxial cable with an SMA-type male connector to the Baseband Controller. For information on RF gain requirements, see  $ONECELL^{\textcircled{R}}$   $Network\ Planning\ Guide,\ v5.5\ (M0304AF)$ .

### **Installing the Baseband Controller into a rack**

The Baseband Controller can be installed in a 19-inch or 600mm rack. The Baseband Controller Chassis package contains two kits: one with 19-inch brackets and one with 600mm brackets.

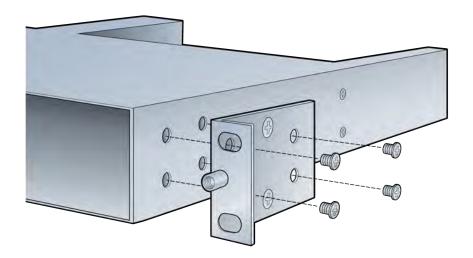

The Baseband Controller, when mounted, must be in the horizontal position. No other orientations are allowed.

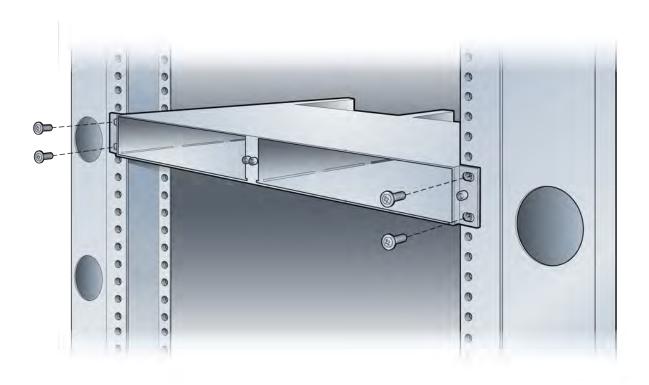

The chassis requires four screws to secure it into the rack.

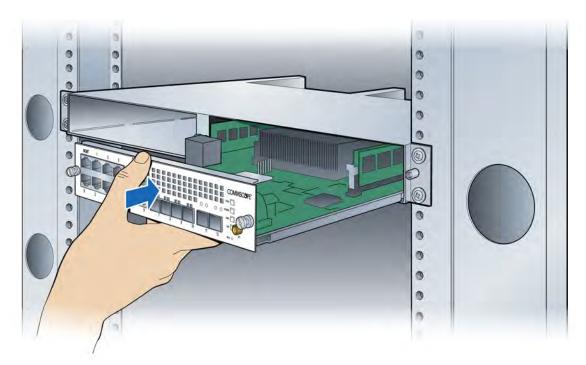

1 Select the 19-inch or 600mm bracket kit according to the size of the rack. Attach the brackets to the Baseband Controller Chassis

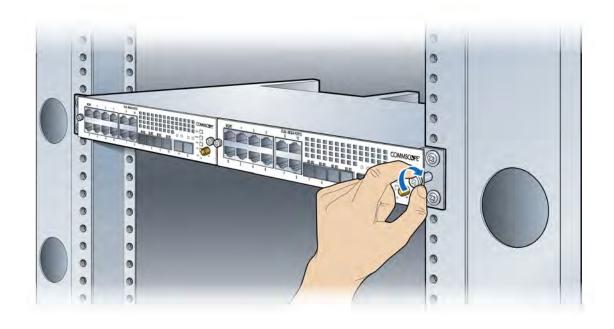

- 2 Slide the chassis into the rack.
- 3 Line up the holes in the chassis ears to the holes in the rack.
- 4 Secure the chassis with the screws.

**5** Carefully slide the BC into the front of the chassis.

**6** Secure the BC by tightening the front panel screws.

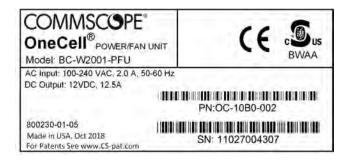

7 In the back of the rack, carefully slide the PFU into the back of the chassis.

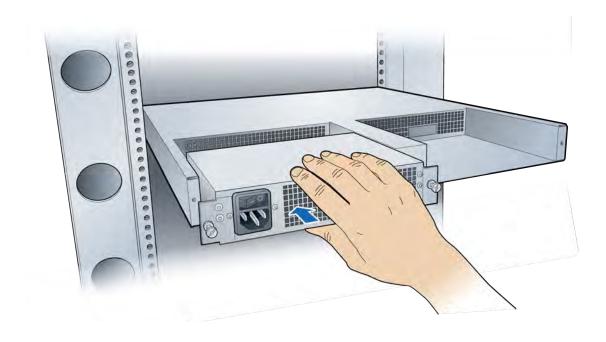

The PFU has a fan hazard. A label is affixed to the top of the PFU indicating the hazard.

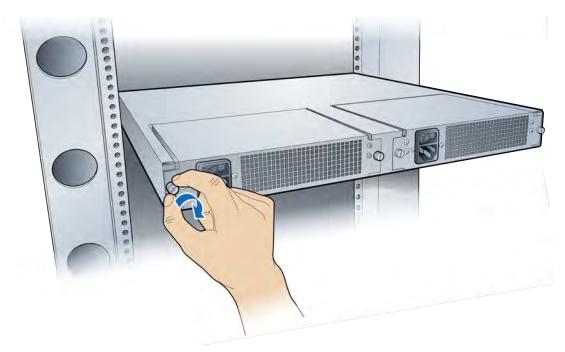

Figure 3-1. Fan label

**NOTE:** The connectors on the PFU should fit easily into the connector on the BC. Do not force the PFU into the chassis.

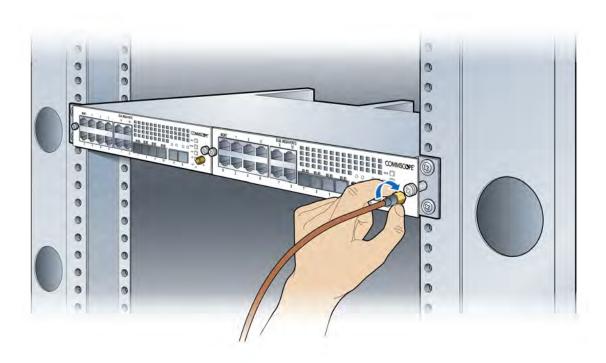

**8** Secure the PFU by tightening the thumb screws.

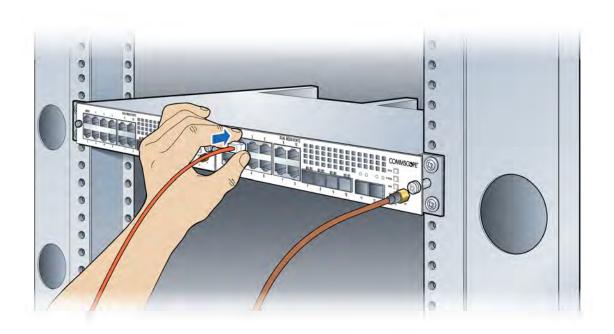

**9** Connect the power cord to the PFU.

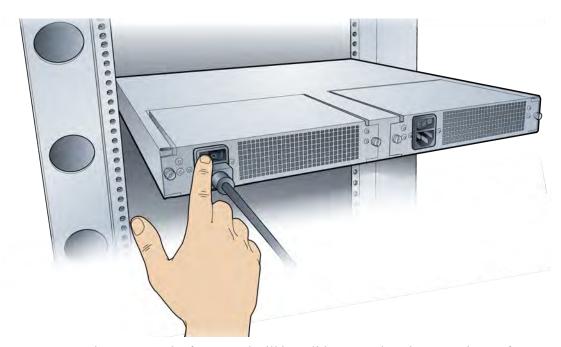

**10** On the Baseband Controller Module's front panel, connect the GPS antenna cable.

11 Connect the Ethernet or fiber optic cable to the appropriate port.

**12** On the back of the Baseband Controller, turn on the power.

The LEDs on the front panel will be solid green, when the power is on. If none are on, check your power connection. If the LED pattern is other than all green, see Baseband Controller LED patterns on page B-2.

# **RP5100i installation**

This chapter describes installing indoor Radio Points on ceiling tiles, above ceiling tiles, on poles and in a flown configuration.

RP5100i installation overview	4-2
Ceiling mount	4-3
Flown mount	4-22
Pole mount	4-31

#### **RP5100i installation overview**

The RP5100i is the Radio Point for indoor solutions.

There are four configurations for installing the RP5100i, which are dependent on the ceiling type.

- Ceiling mount, on tile
- Ceiling mount, above tile
- Flown mount
- Pole mount

Once the Radio Point is installed and powered on, it may take up to 20 minutes for the frequency to stabilize and lock.

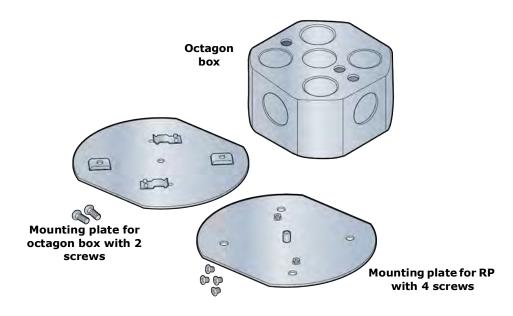

If the MR port is connected to a switch that does not provide IEEE802.3bt, type-4 PoE power, the SR port can be used to provide power with a PoE++ injector. For more information, see *ONECELL*® *Network Planning Guide*, v5.5 (M0304AF).

# **Ceiling mount**

Mounting the Radio Point (RP) above or on the ceiling tile requires the following hardware provided by CommScope:

- Radio Point plate and screws
- 4" octagon box, 1-1/2" deep with 1/2" side cutouts
- Clamp and screw

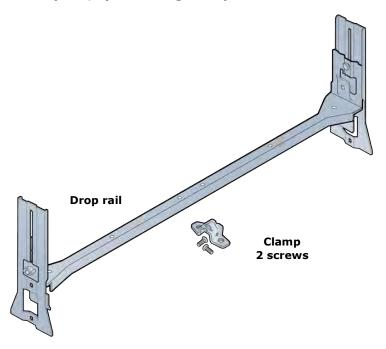

Figure 4-1. CommScope ceiling mount kit contents

Mounting the Radio Point (RP) above or on the ceiling tile requires the following hardware provided by the system integrator:

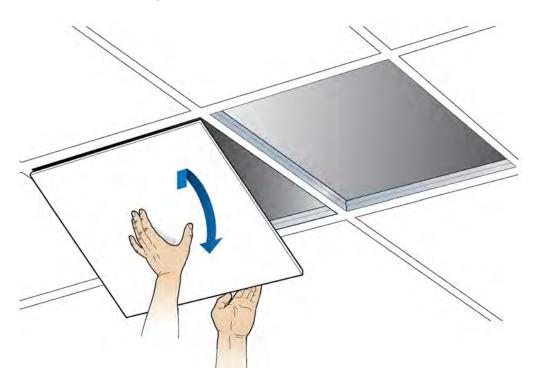

• Drop rail – Eaton B-line BA50A or equivalent, with a static load capacity of at least 25 lbs without a drop wire, recommended

Figure 4-2. Drop rail, system integrator-provided

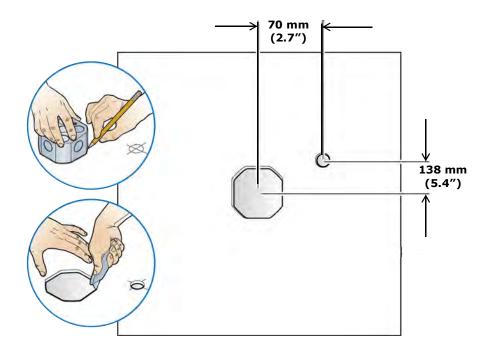

### Mounting the Radio Point on the ceiling tile

1 Remove two ceiling tiles from the overhead.

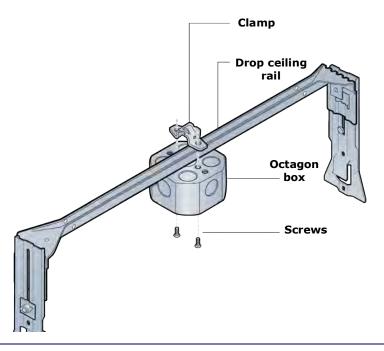

- **2** Place the octagon box on the tile and trace the outline. Cut the opening.
- **3** Drill a 1/2-inch diameter hole for the Ethernet cable pass-through.

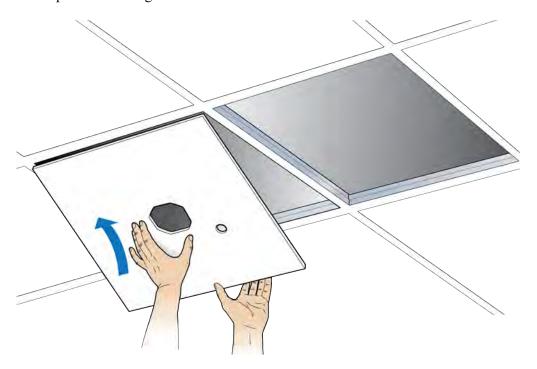

**NOTE:** Use a 1-1/2 deep RACO 8125 or equivalent.

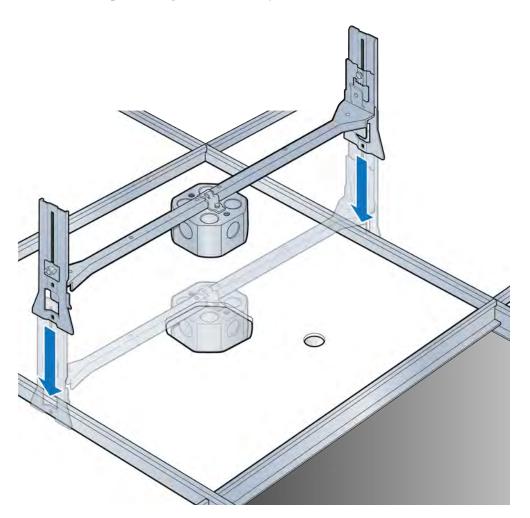

4 Attach the octagon box to the ceiling bracket using a clamp and screw.

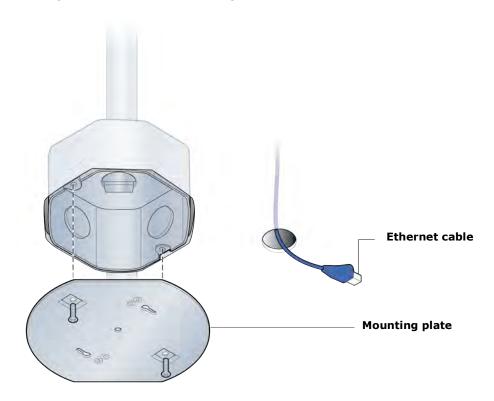

**5** Replace the ceiling tile with the cutouts.

**6** Install the drop rail/octagon box assembly over the modified tile.

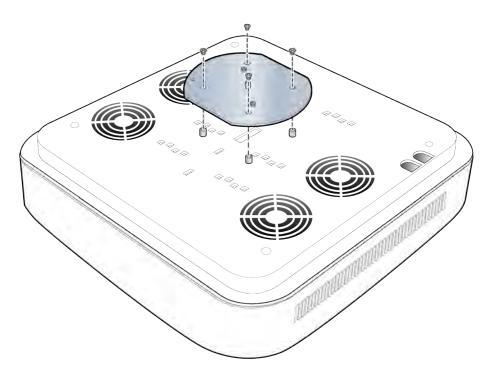

7 Attach the mounting plate onto the octagon box and feed the Ethernet cable through the small hole in the ceiling tile.

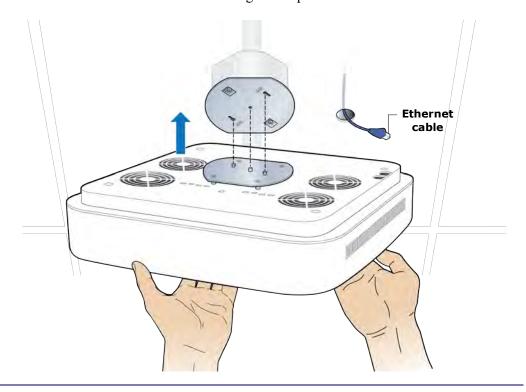

**8** Attach base plate to the Radio Point.

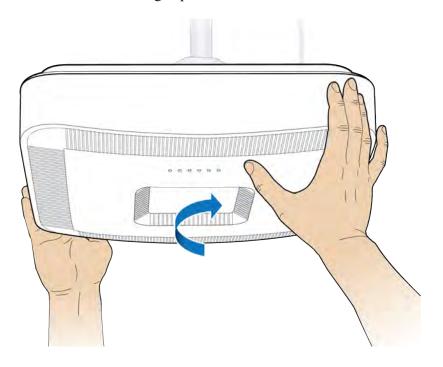

**NOTE:** Apply thread locking compound to screws prior to installation.

**9** Mount the Radio Point on the octagon box plate.

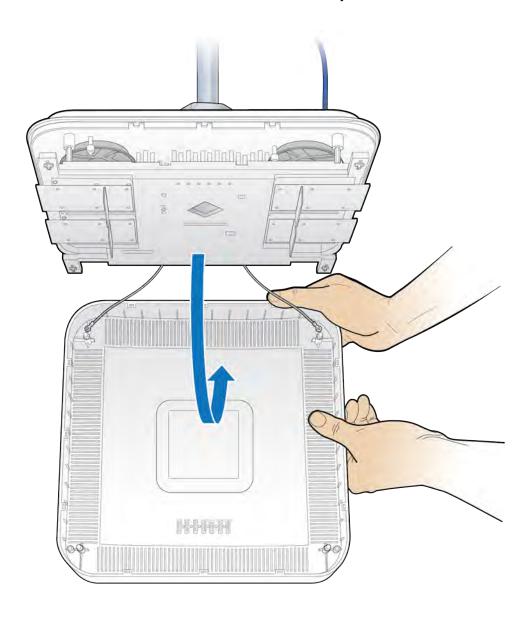

### **10** Secure Radio Point to the octagon plate.

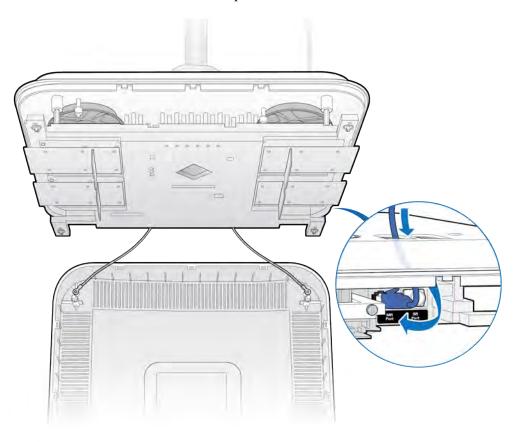

### **11** Remove the cover from the RP.

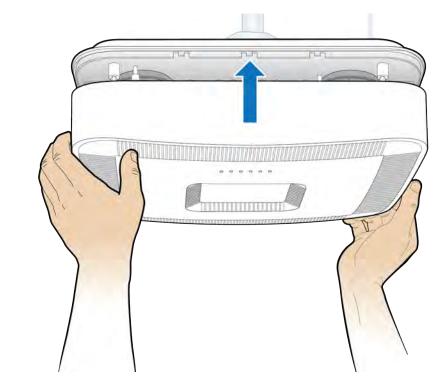

**NOTE:** The cover is attached to the RP with two lanyards.

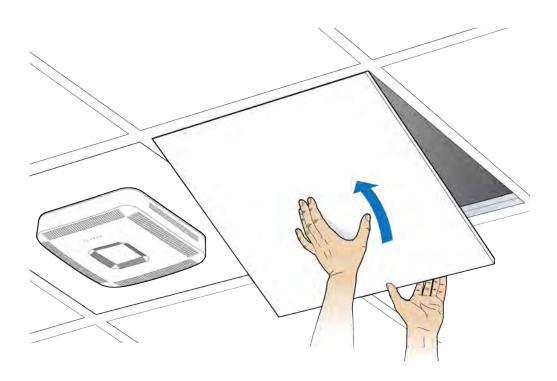

**13** Replace plastic cover on the Radio Point.

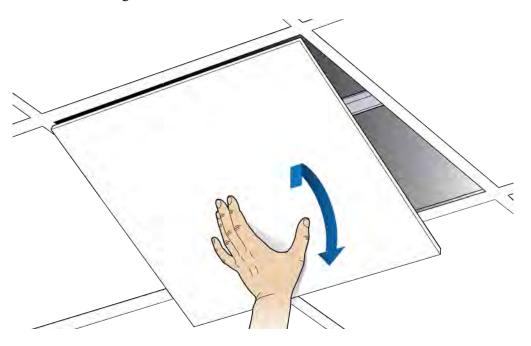

**14** Replace the ceiling tile next to the Radio Point.

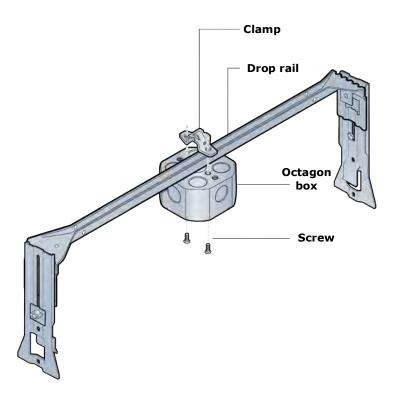

## Mounting the Radio Point above the ceiling tile

1 Remove ceiling tile from the overhead.

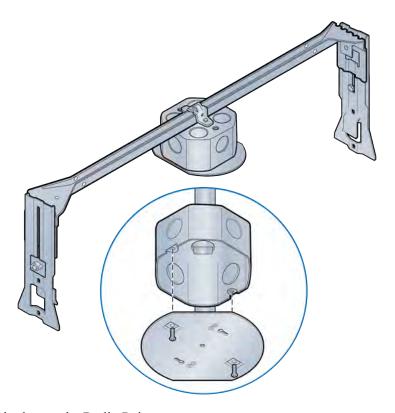

**2** Attach the octagon box to the bracket.

**NOTE:** CommScope recommends an Eaton B-line – BA50A adjustable bracket.

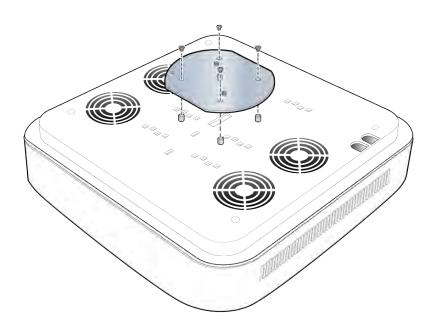

Attach the bracket to the mounting plate to the octagon box.

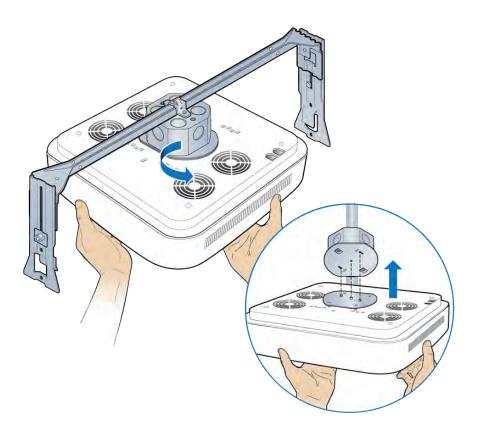

**4** Attach plate to the Radio Point.

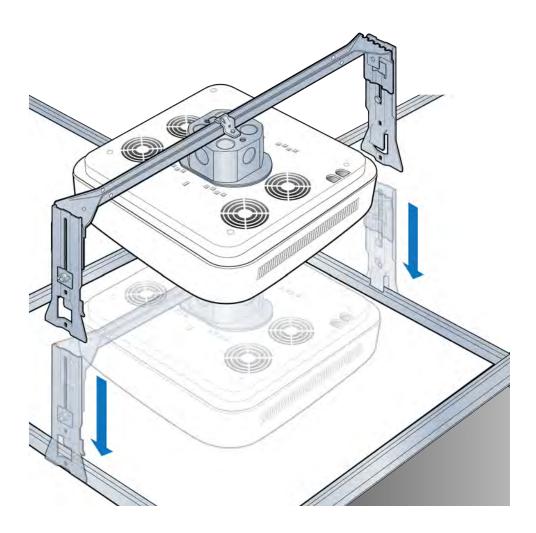

**NOTE:** Apply thread locking compound to screws prior to installation.

**5** Attach the Radio Point to the octagon box mounting plate.

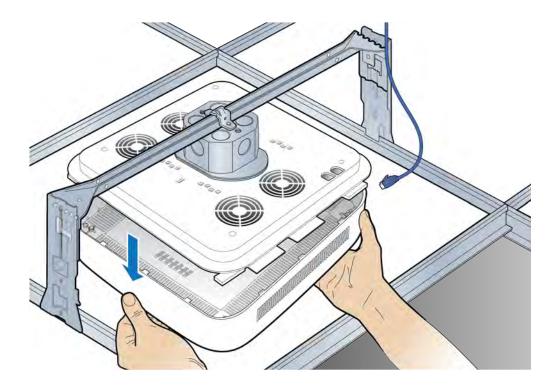

**6** Install drop rail above the ceiling tile.

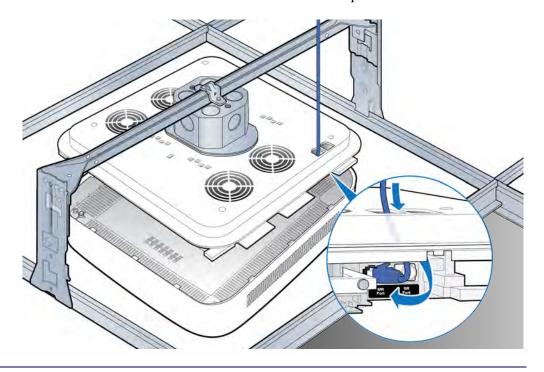

**7** Remove the cover from the RP.

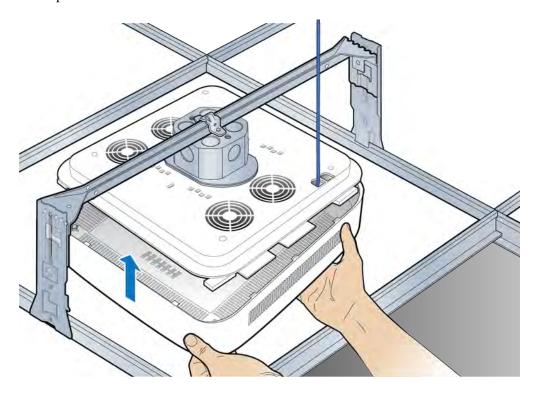

**NOTE:** The cover is attached to the RP with two lanyards.

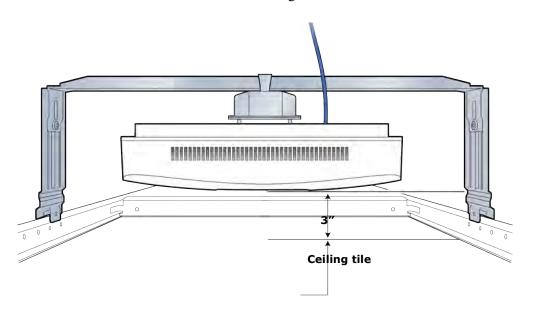

8 Connect the Ethernet cables to the Radio Point MR port.

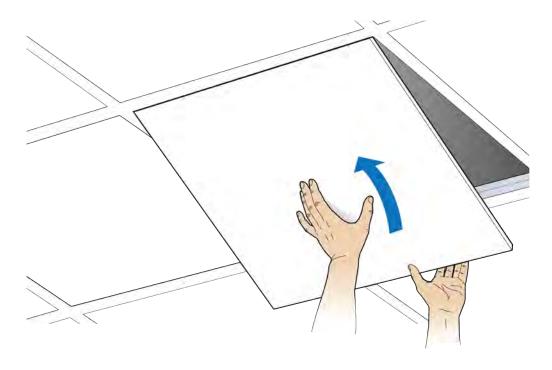

**9** Replace the cover on the Radio Point.

**NOTE:** The minimum clearance for cooling is 3 inches.

**10** Replace the ceiling tile.

### Flown mount

The Radio Point can be flown mounted on the end of a rod. This configuration is used for building where there are no drop ceilings.

Mounting the Radio Point (RP) in the flown configuration requires the following hardware provided by CommScope in the mounting kit:

- Radio Point plate and screws
- 4" octagon box, 1-1/2" deep with 1/2" side cutouts

**NOTE:** Remove the top, middle cutout.

• Clamp and screw – this hardware is not required for the flown mount option

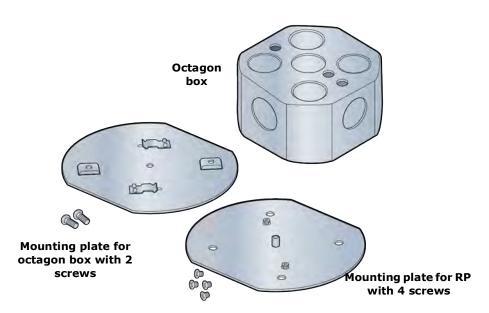

Figure 4-3. CommScope flown mount kit contents

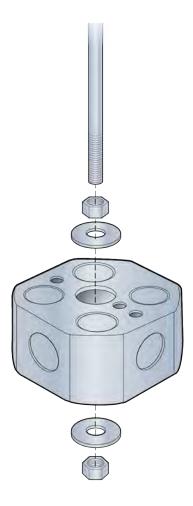

Mounting the Radio Point (RP) in the flown configuration requires the following hardware provided by the system integrator:

- Rod, 3/8-inch threaded
- Nut
- Lock nut, nylon
- Flat washers

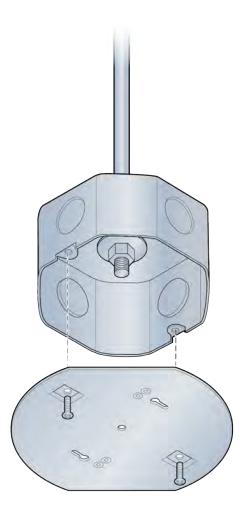

#### Flown mount installation

- 1 Attach the threaded, 3/8-inch rod, cut to the required length, to the ceiling.
- **2** Install the nut and a flat washer on the rod.
- **3** Slide the octagon box on the rod and install a flat washer and the nylon lock nut.

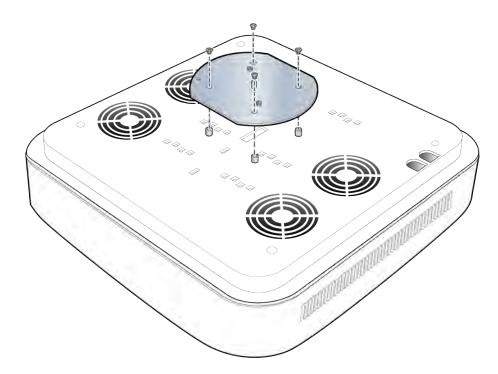

**NOTE:** Be sure the bracket is tight between the nuts and there is enough clearance at the end of the rod to attach the bracket to the Radio Point.

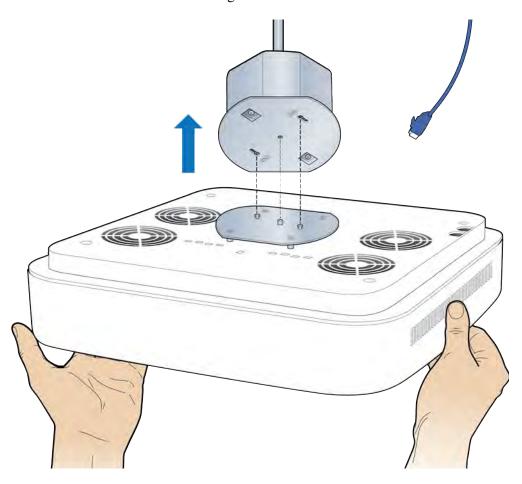

**4** Attach plate to octagon box.

**5** Attach the mounting plate to the Radio Point.

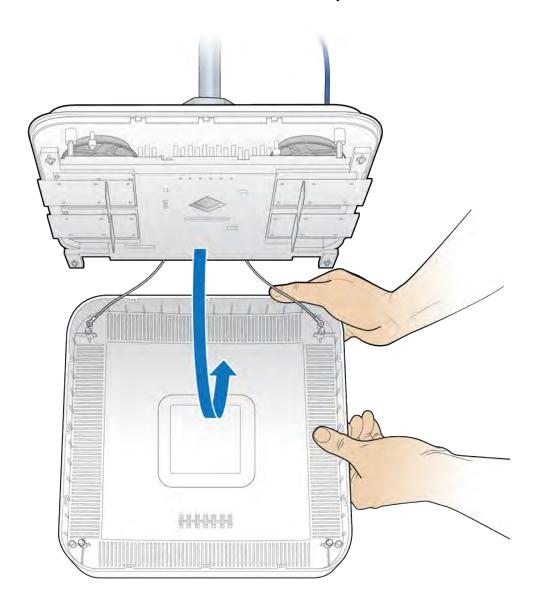

**6** Attach the Radio Point to the octagon box.

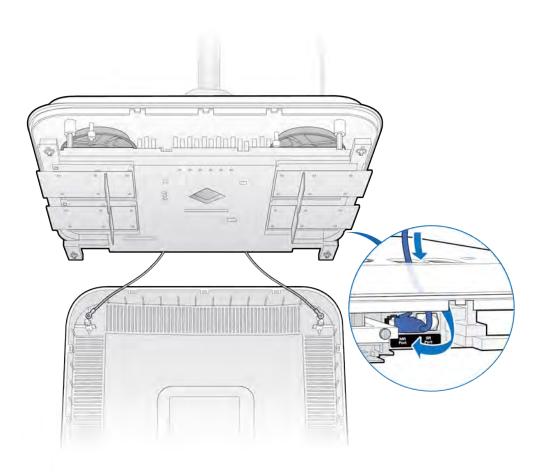

### **7** Remove the cover from the RP.

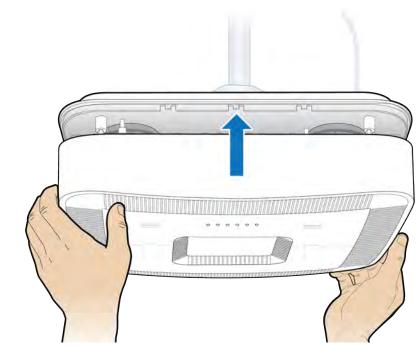

**NOTE:** The cover is attached to the RP with two lanyards.

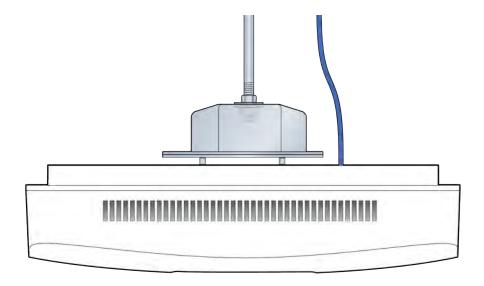

8 Connect the Ethernet cable to the Radio Point MR port.

**9** Attach the plastic cover to the Radio Point.

Installation is complete.

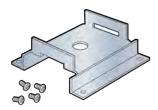

#### **Pole mount**

The Radio Point can be pole mounted. This configuration is used for building where there are no drop ceilings.

Mounting the Radio Point (RP) on a pole requires the following hardware provided by CommScope in the mounting kit:

- Mounting bracket
- Screws

Figure 4-4. Mounting bracket kit contents

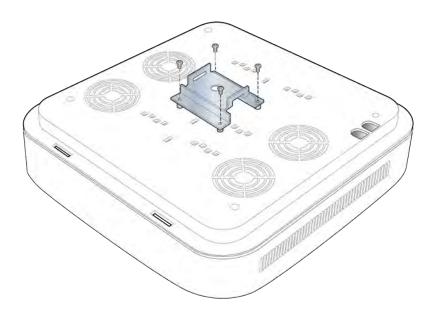

Mounting the Radio Point (RP) on a pole requires the following hardware provided by the system integrator:

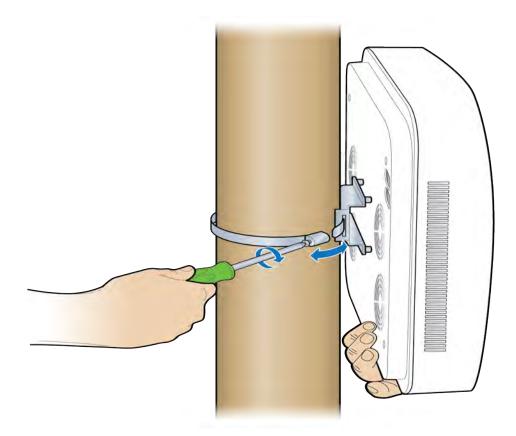

• Adjustable clamp at least 2 inches larger than the circumference of the pole

#### **Pole mount installation**

1 Attach the bracket to the Radio point.

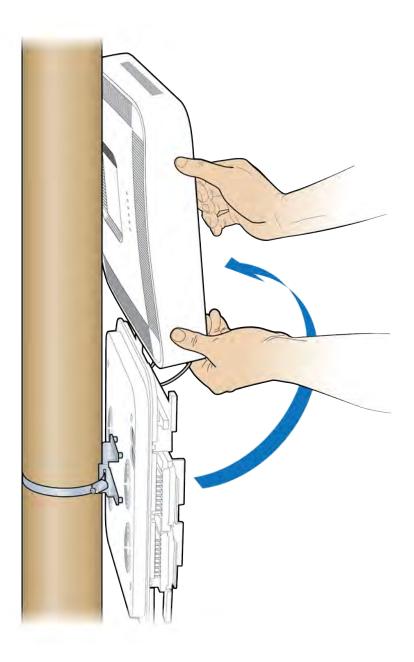

- 2 Slide the adjustable clamp through the slots on the Radio Point bracket.
- **3** Wrap the clamp around the pole and tighten the clamp screw to secure the Radio Point to the pole.

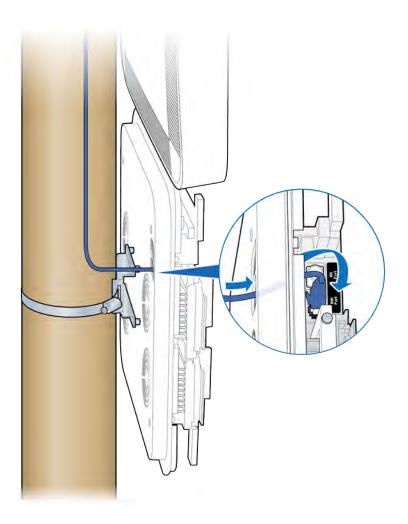

4 Remove the cover from the RP.

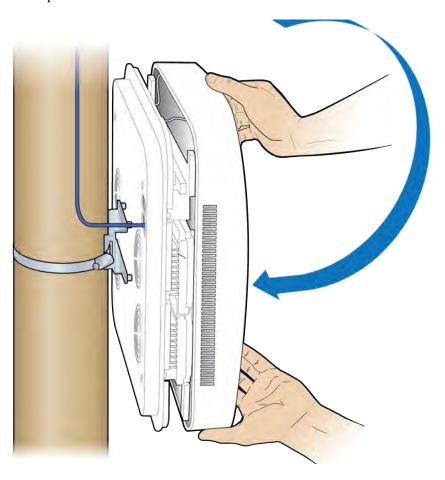

**NOTE:** The cover is attached to the RP with two lanyards.

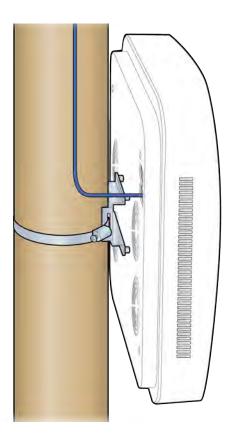

**5** Connect the Ethernet cable to the Radio Point MR port.

**6** Replace the plastic cover on the Radio Point.

Installation is complete.

# **RP5100r installation**

This chapter describes installing Rugged Radio Points on poles and walls.

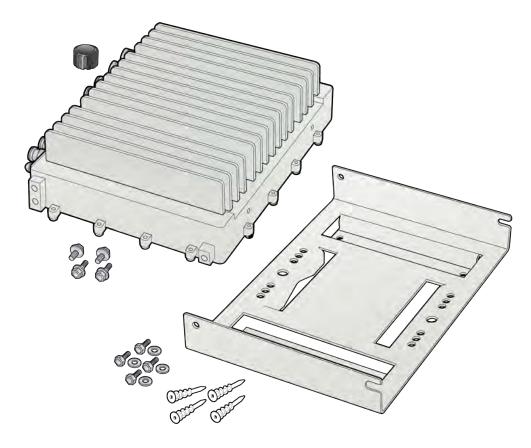

Rugged Radio Point installation overview	5-2
Pole mount installation	5-4
Wall mount installation	5-10

## **Rugged Radio Point installation overview**

The Rugged Radio Point (RP) ships with the following hardware:

- · Radio Point
- Mounting plate
- Mounting bolts (M8 Hex)
- RJ45, IP67 connector for CAT 6A cables

Figure 5-1. Hardware provided by CommScope

An M8 hex wrench is required to install mounting bolts.

Mounting the Radio Point (RP) on a pole requires the following hardware provided by the system integrator:

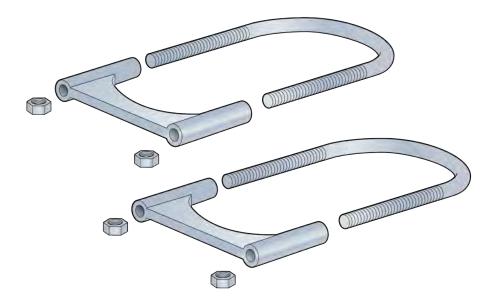

- Two U bolts
- Four nuts

- RJ45, IP67 connector for CAT 5E
- Ethernet surge protector, as required by local code (for example, DTK-MRJPOEX or DTK-MRJPOES)

If the MR port is connected to a switch that does not provide IEEE802.3bt, type-4 PoE power, the SR port can be used to provide power with a PoE++ injector. In this case, the installer needs to provide a CAT 5E – MPN 17-10044 connector (<a href="https://www.conec.com/catalog/en/rj45-stecker-set.html">https://www.conec.com/catalog/en/rj45-stecker-set.html</a>) to connect the RJ45 to the SR port. For more information, see *ONECELL® Network Planning Guide*, v5.5 (M0304AF).

Figure 5-2. Hardware provided by the systems integrator

Mounting the Radio Point (RP) on a wall requires the following hardware provided by the system integrator:

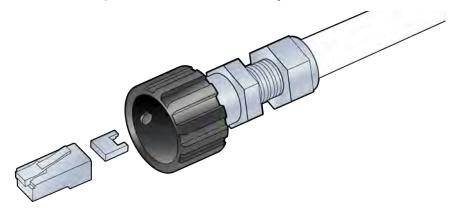

• Four molly screws capable – 50 lb (23 kg) minimum rating

Once the Radio Point is installed and the powered on, it may take up to 20 minutes for the frequency to stabilize and lock.

Before connecting the Ethernet cables to the RP, terminate the RP end of the Ethernet cable with the RJ45, IP67 connector.

Figure 5-3. RJ45, IP67 connector assembly

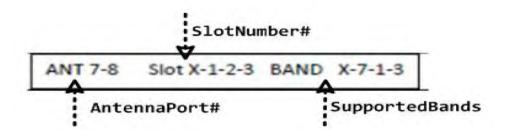

#### Antenna port label

In a multi operator deployment, each operator can connect their own antenna for the Bands and slots they intend to use. This feature allows an operator to reserve the Band/Radio module slot on an outdoor RP5100r to be used for or by a Baseband Controller when outdoor RP5100s are deployed in an enterprise with multiple Baseband Controllers (up to 4).

The antenna port label shows the antenna ports, internal slot number and supported band. These parameters are configured at the factory.

Figure 5-4. Antenna port label

### **Pole mount installation**

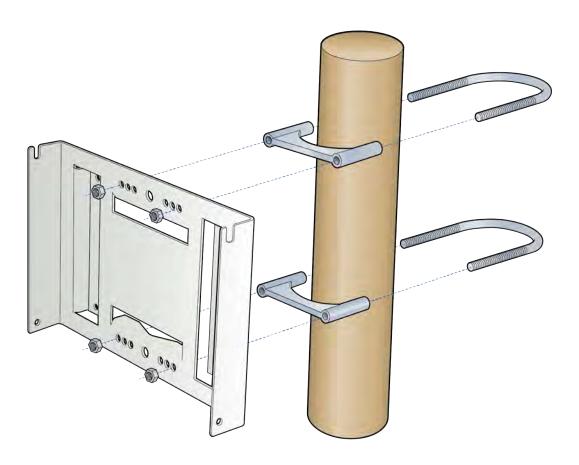

There is vertical orientation for pole mount installations

The minimum pole diameter requirement is 4" (102mm).

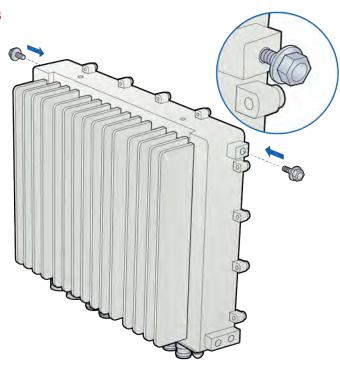

### **Vertical pole mount**

1 Slide the two U bolt clamps onto the pole and secure the RP mounting plate to the clamps with four nuts.

2 Insert two screws into the upper holes on opposite sides of the RP.

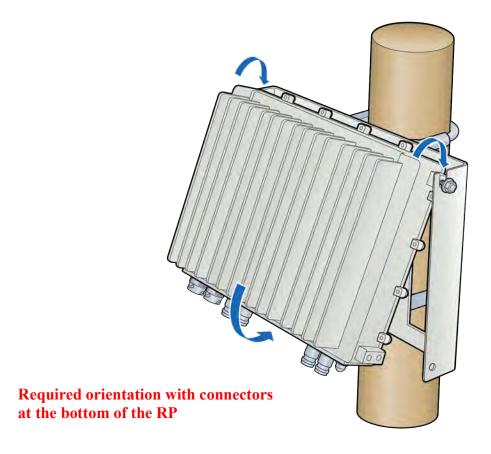

Required orientation is with connectors at the bottom of the RP

**3** Hang the RP to the mounting bracket using the installed screws.

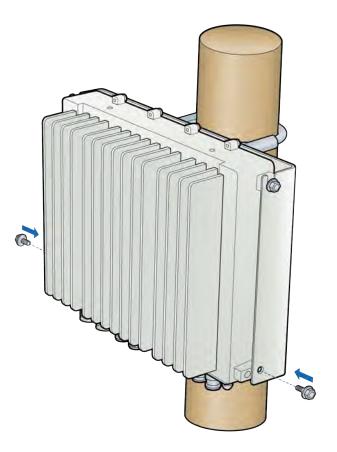

Ensure that the RP is oriented correctly with all connectors at the bottom of the RP.

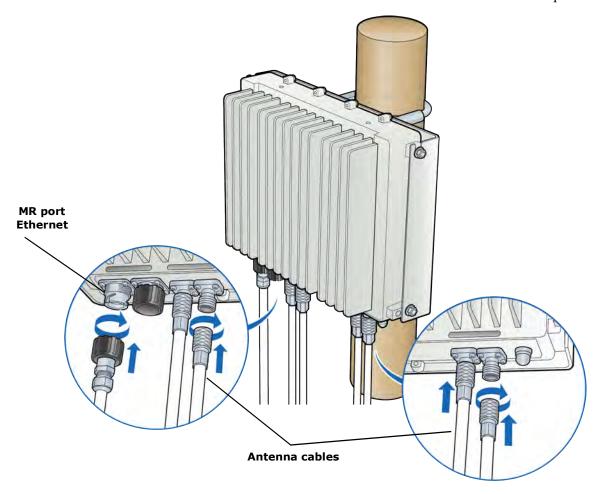

4 Align holes at bottom location of bracket. Insert and tighten the bottom screws through the plate hole into both sides of the RP. Be sure that all four screws are tightened.

**NOTE:** The torque requirement for the mounting screws is 20-21 in-lbs.

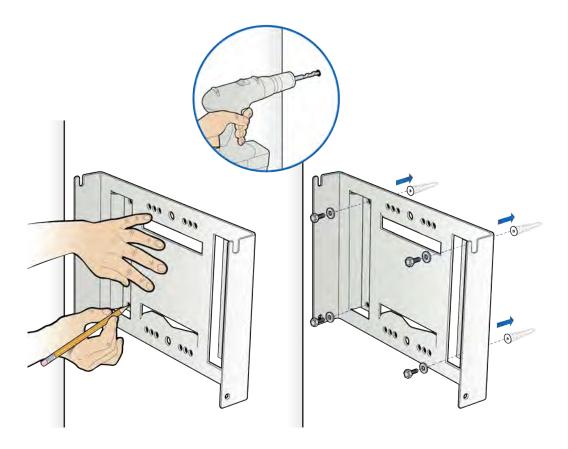

- **5** Connect the antenna cables on the bottom of the RP.
- **6** Connect the Ethernet cable RJ45 end to the bottom of the RP to the MR port.

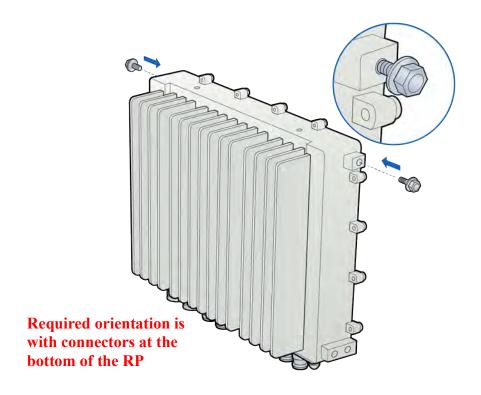

## **Wall mount installation**

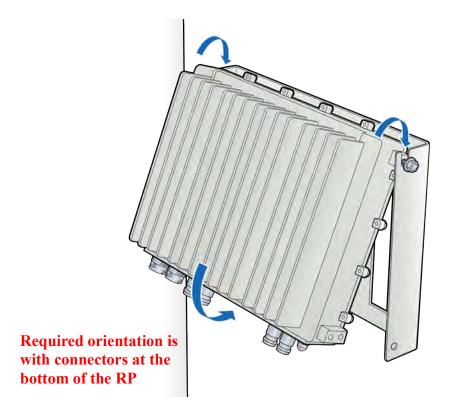

1 Drill four holes in the wall using the mounting plate to determine the hole locations. Mount the backplate on the wall with four molly screws.

**2** Insert two screws into the upper holes on opposite sides of the RP as shown in the drawing below.

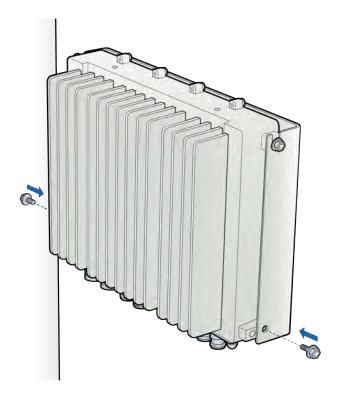

**3** Attach the RP to the mounting plate.

**4** Tighten the top screws on the RP and insert and tighten the bottom screws on the RP.

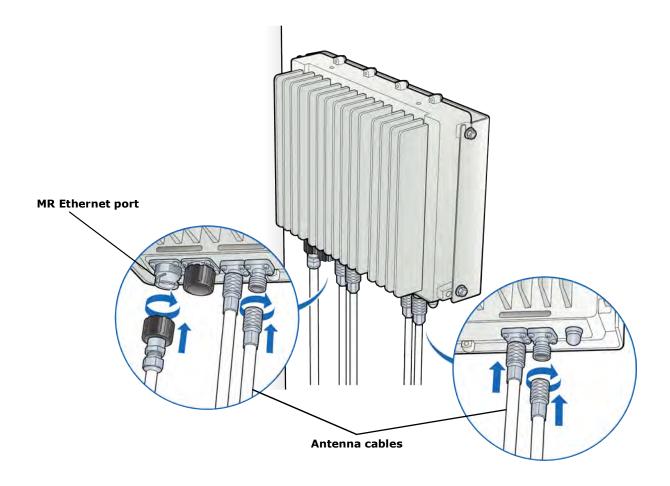

**NOTE:** The torque requirement for the mounting screws is 20-21 in-lbs.

**5** Insert and tighten the bottom screws through the plate hole into both sides of the RP.

- **6** Connect the antenna cables on the bottom of the RP.
- **7** Connect the Ethernet cable RJ45 end to the bottom of the RP to the MR port.

**NOTE:** Insert the Ethernet surge protection as required by local code (for example, DTK-MRJPOEX or DTK-MRJPOES).

# **RP2000 Installation**

This chapter describes installing indoor Radio Points on ceiling tiles, above ceiling tiles, on poles and in a flown configuration.

Indoor Radio Point (RP2000) installation overview	6-2
Ceiling mount	6-3
Flown mount	6-17
Pole mount	6-23

# **Indoor Radio Point (RP2000) installation overview**

There are four configurations for installing the Radio Point, which are dependent on the ceiling type.

- Ceiling mount, on tile
- Ceiling mount, above tile
- Flown mount
- Pole mount

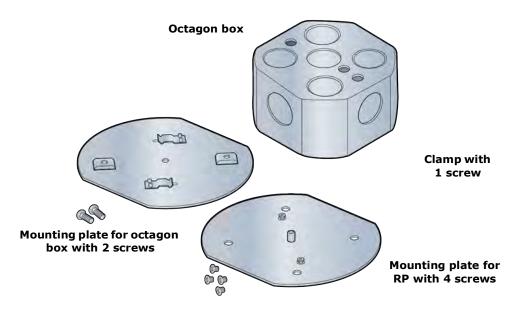

Once the Radio Point is installed and the powered on, it may take up to 20 minutes for the frequency to stabilize and lock.

# **Ceiling mount**

Mounting the Radio Point (RP) above or on the ceiling tile requires the following hardware provided by CommScope:

- Radio Point mounting plate and 4 screws
- Octagon box mounting plate and 2 screws
- 4" octagon box, 1-1/2" deep with 1/2" side cutouts
- Clamp with screw not required for flown mount option

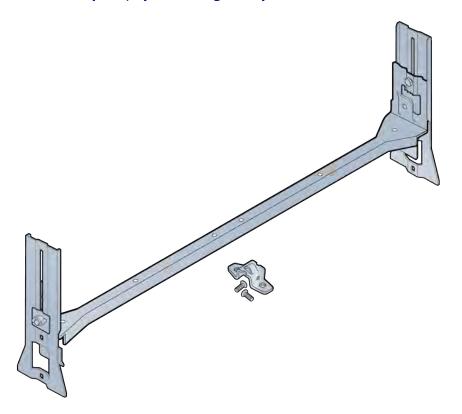

Figure 6-1. CommScope ceiling mount kit contents

Mounting the Radio Point (RP) above or on the ceiling tile requires the following hardware provided by the systems integrator:

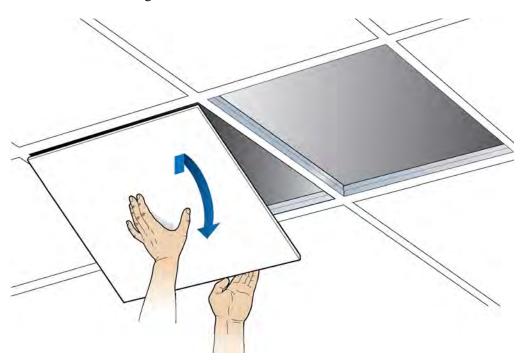

• Drop rail – Eaton B-line BA50 recommended

Figure 6-2. Drop rail, system integrator-provided

### Mounting the Radio Point on the ceiling tile

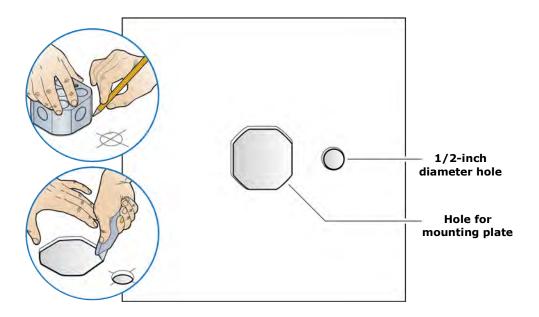

1 Remove two ceiling tiles from the overhead.

**2** Place the octagon box on the tile and trace the outline. Cut the opening.

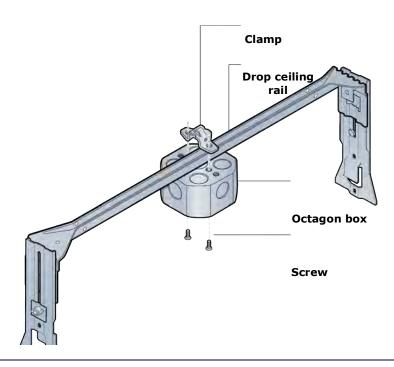

**3** Drill a 1/2-inch diameter hole for the Ethernet cable pass-through.

**NOTE:** Use a 1-1/2 deep RACO 8125 or equivalent.

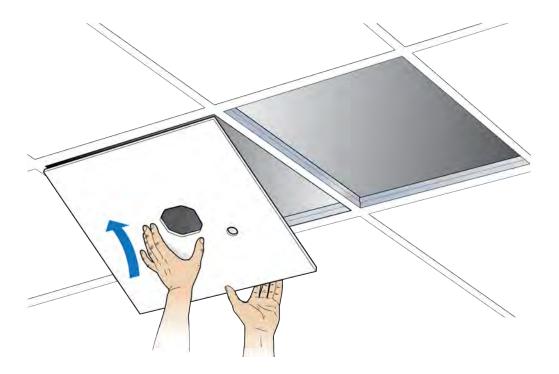

4 Attach the octagon box to the ceiling bracket using a clamp and screw.

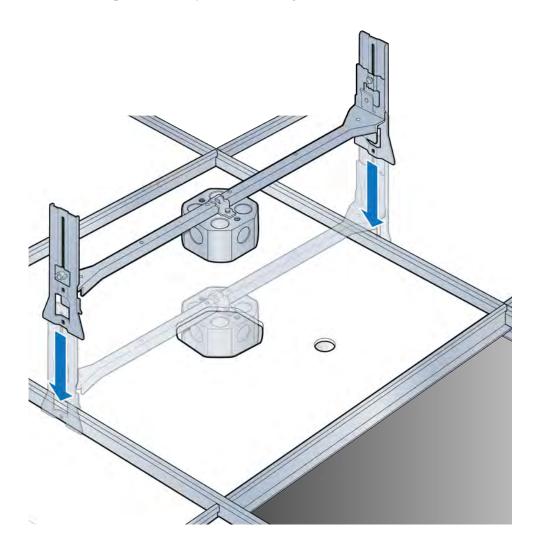

**NOTE:** CommScope recommends the Eaton B-line – BA50 bracket.

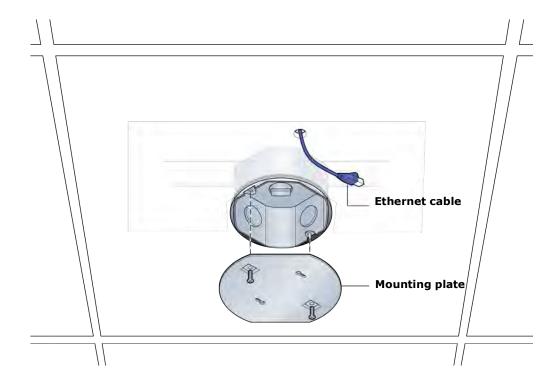

**5** Replace the ceiling tile with the cutouts.

**6** Install the drop rail assembly over the ceiling tile with the cutouts.

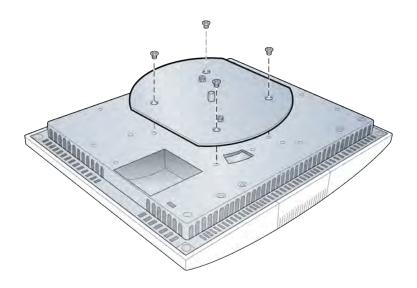

7 Attach the mounting plate onto the octagon box.

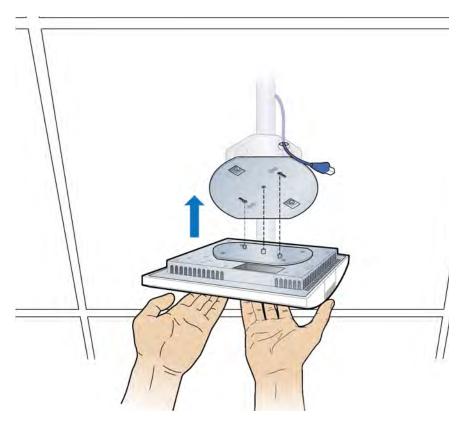

**8** Attach base plate to the Radio Point.

**NOTE:** Apply thread locking compound to screws prior to installation.

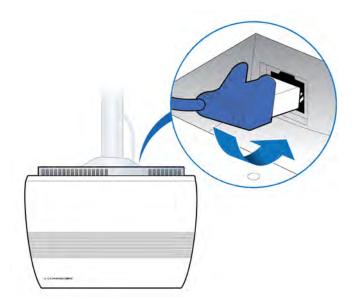

**9** Mount the Radio Point to the octagon box plate.

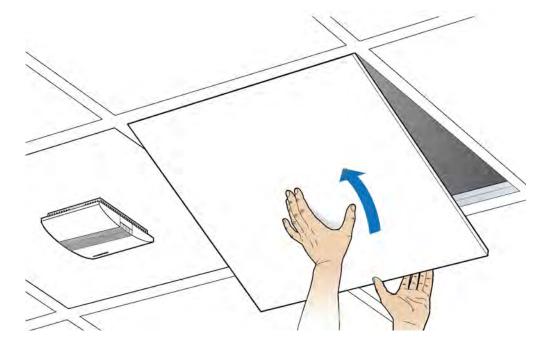

**10** Secure the Radio Point.

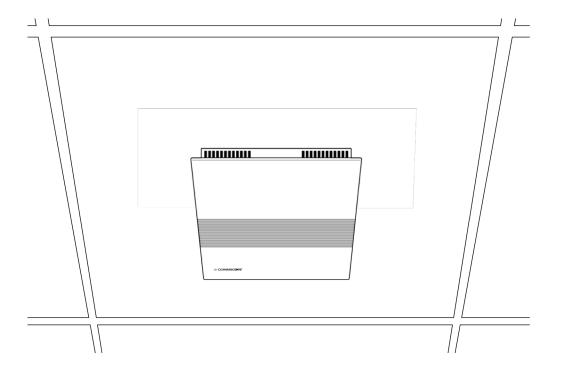

11 Connect the Ethernet cable to the Radio Point.

**12** Replace the second ceiling tile.

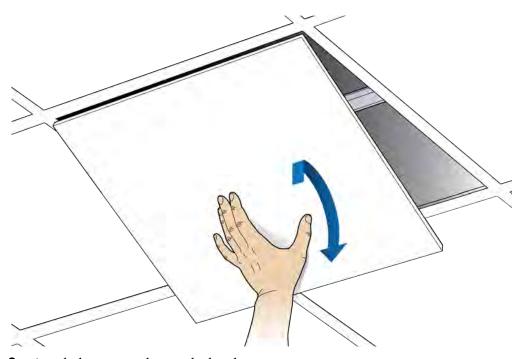

### Installation is complete.

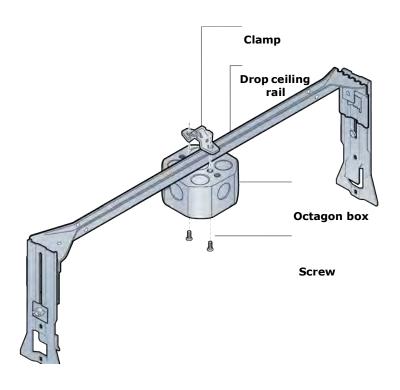

### Mounting the Radio Point above the ceiling tile

**1** Remove ceiling tile from the overhead.

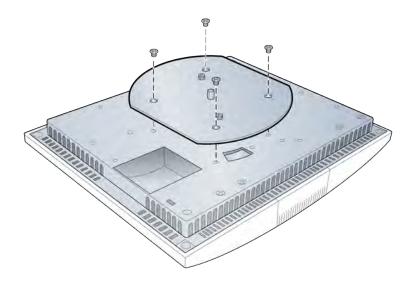

**2** Attach the octagon box to the bracket.

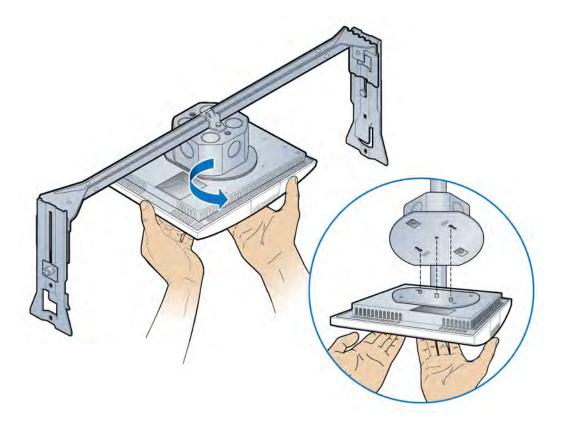

**3** Attach the mounting plate to the Radio Point.

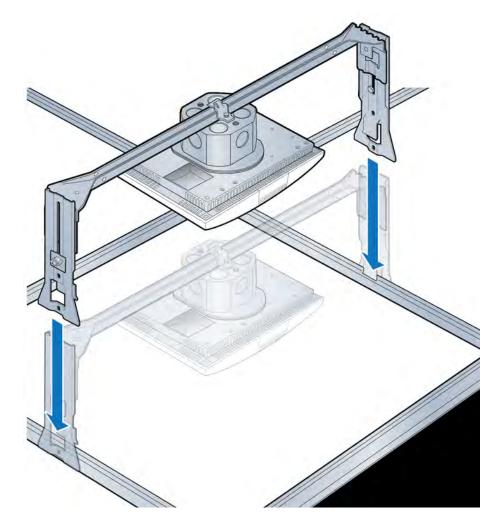

**NOTE:** Apply thread locking compound to screws prior to installation.

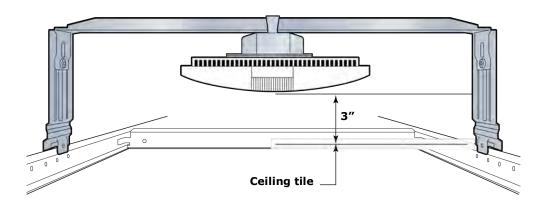

4 Attach the Radio Point to the octagon box.

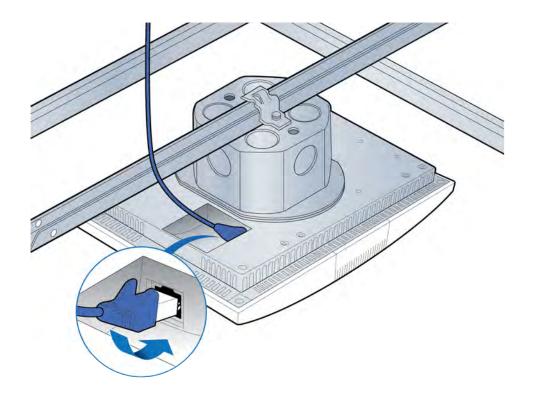

**5** Install the drop rail assembly to the ceiling tile rail.

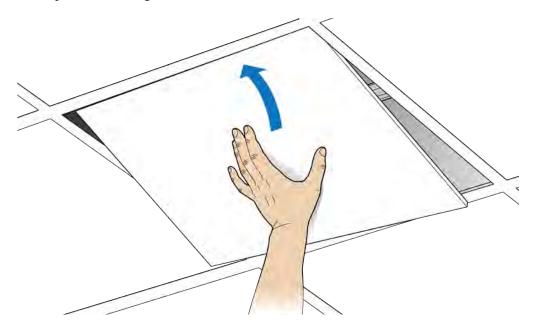

**NOTE:** The minimum clearance for cooling is 3 inches.

### **6** Connect Ethernet cable to RP.

# **7** Replace the ceiling tile.

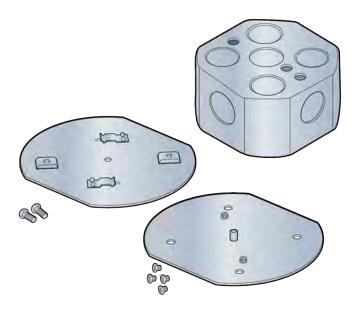

#### Flown mount

The Radio Point can be flown mounted on the end of a rod. This configuration is used for buildings where there are no drop ceilings.

Mounting the Radio Point (RP) in the flown configuration requires the hardware listed in Indoor Radio Point (RP2000) installation overview on page 6-2

Figure 6-3. CommScope supplied kit contents

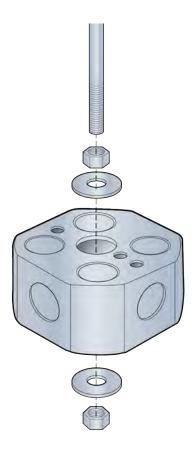

Mounting the Radio Point (RP) in the flown configuration requires the following hardware provided by the system integrator:

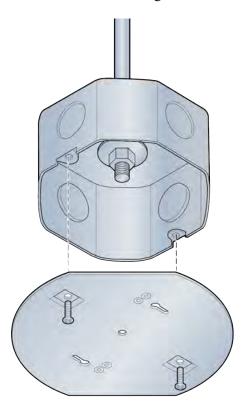

- Rod, 3/8-inch threaded
- 2 flat washers
- Nut
- Lock nut, nylon

#### Flown mount installation

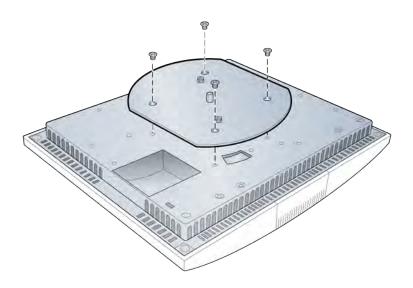

- 1 Attach the threaded, 3/8-inch rod, cut to the required length, to the ceiling.
- 2 Install the nut and a flat washer on the rod.
- 3 Slide the octagon box onto the rod and install a flat washer and the nylon lock nut.

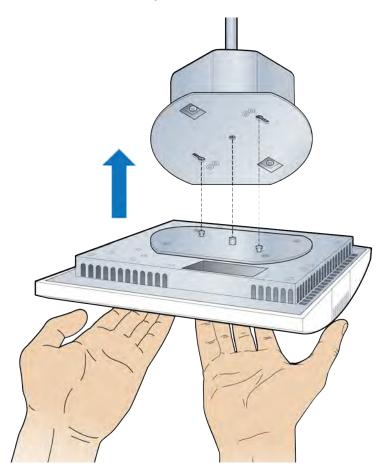

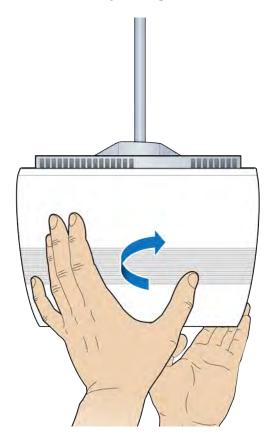

**5** Attach the CommScope supplied mounting plate to the Radio Point with four screws.

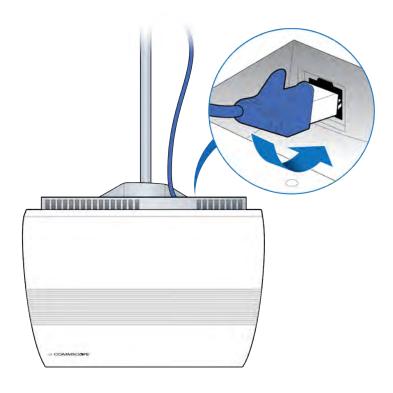

**6** Attach the Radio Point to the octagon box.

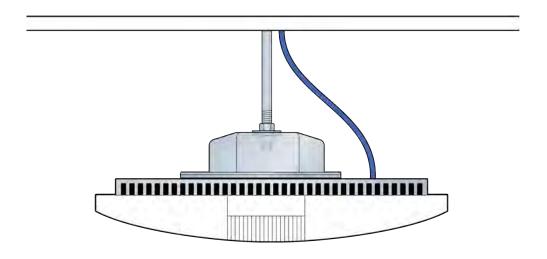

**7** Secure the Radio Point to the octagon box plate.

**8** Connect the Ethernet cable to the Radio Point.

Installation is complete.

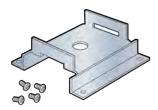

#### **Pole mount**

The Radio Point can be pole mounted. This configuration is used for building where there are no drop ceilings.

Mounting the Radio Point (RP) on a pole requires the following hardware provided by CommScope in the mounting kit:

- Mounting bracket
- 4 screws

Figure 6-4. Mounting bracket kit contents

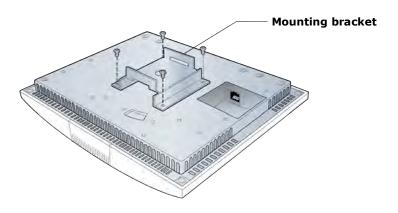

Mounting the Radio Point (RP) on a pole requires the following hardware provided by the system integrator:

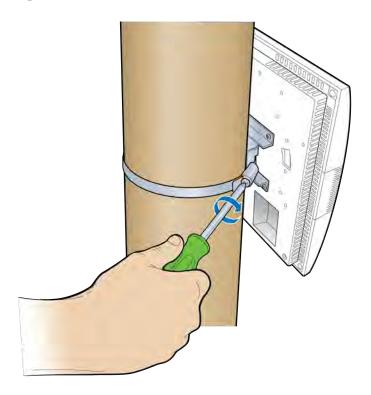

• Adjustable clamp at least 2 inches larger than the circumference of the pole

#### **Pole mount installation**

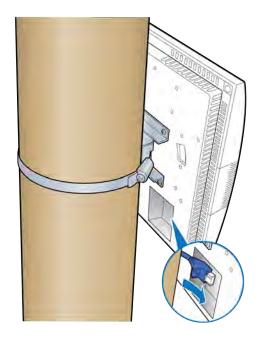

1 Attach the bracket to the Radio point.

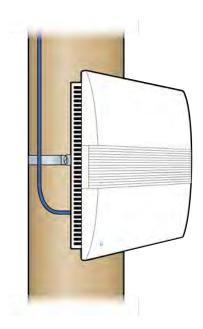

- 2 Slide the adjustable clamp through the slots on the Radio Point bracket.
- **3** Wrap the clamp around the pole and tighten the clamp screw to secure the Radio Point to the pole.

4 Connect the Ethernet cable to the Radio Point.

## Installation is complete.

## **RP2100 Installation**

This chapter describes installing Rugged Radio Points on poles and walls.

Rugged Radio Point (RP2100) installation overview	7-2
Pole mount installation	7-4
Wall mount installation	7-17

### Rugged Radio Point (RP2100) installation overview

The Rugged Radio Point (RP) ships with the following hardware:

- Radio Point
- Mounting plate
- Mounting brackets
- Four tamper-resistant mounting screws (M5)
- RJ45, IP67 connector
- Two 4.3-10 antenna couplers

A tamper-resistant T25 Torx bit, 1/4" hex shank, attached to a driver handle, is required to secure the tamper-resistant mounting screws.

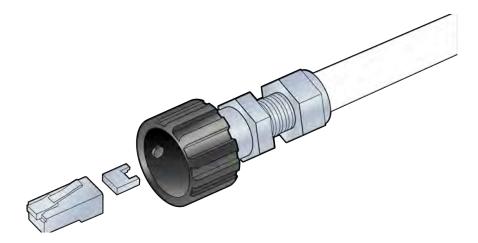

Mounting the Radio Point (RP) on a pole requires the following hardware provided by the system integrator:

• Two adjustable clamps

Mounting the Radio Point (RP) on a wall requires the following hardware provided by the system integrator:

• Four molly screws capable – 50 lb (23 kg) minimum rating

Before installing the RP on the pole, terminate the RP end of the Ethernet cable with the RJ45, IP67 connector provided in the box.

Once the Radio Point is installed and the powered on, it may take up to 20 minutes for the frequency to stabilize and lock.

#### **Pole mount installation**

There are two orientations for pole mount installations:

- Vertical pole mount
- Horizontal pole mount

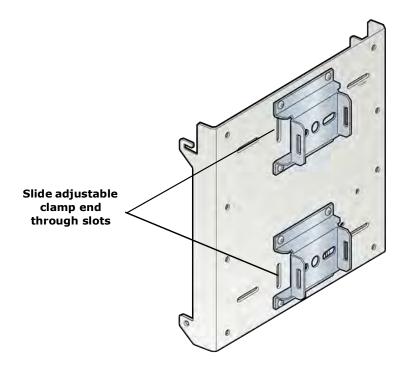

The minimum pole diameter requirement is 4" (102mm).

#### **Vertical pole mount**

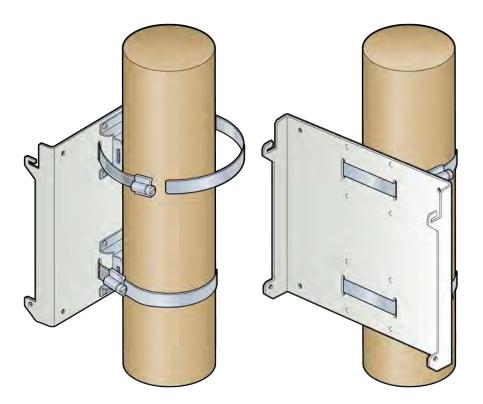

**1** Attach mounting brackets to mounting plate.

**NOTE:** The torque requirement for the bracket mounting screws is 5-6 in-lbs.

**2** Slide the adjustable clamp through the slots on each RP mounting bracket on the RP plate.

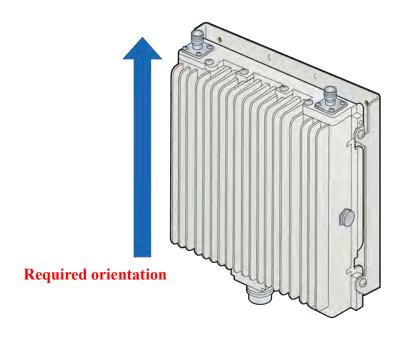

Wrap each clamp around the pole and tighten the clamp screw to secure the RP to the pole.

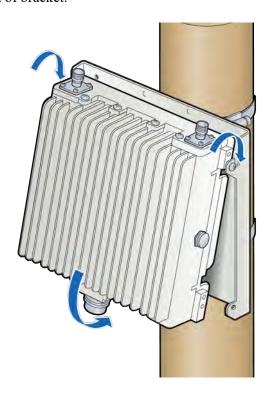

**4** Insert two screws into the upper holes on opposite sides of the RP as shown in the drawing below.

Ensure that the RP is oriented correctly with the two antenna connectors at the top of the RP.

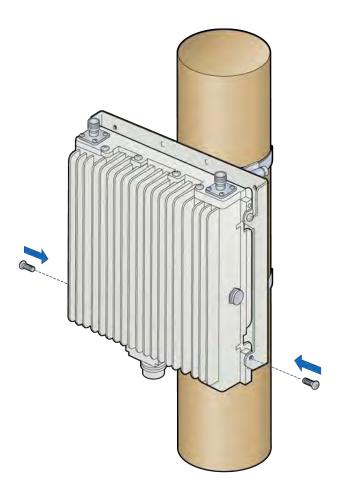

**5** Hang the RP to the mounting bracket using the installed screws. Align holes at bottom location of bracket.

6 Insert and tighten the bottom screws through the plate hole into both sides of the RP. Be sure that all four screws are tightened.

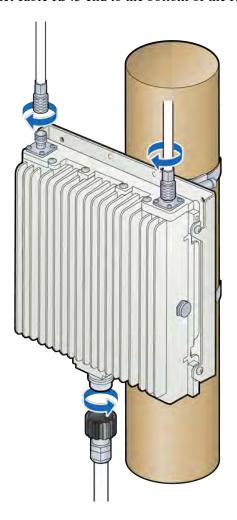

**NOTE:** The torque requirement for the mounting screws is 20-21 in-lbs.

**7** Connect the antenna couplers on the top of the RP.

**NOTE:** Check the antenna coupler manufacturer's documentation for torque requirements.

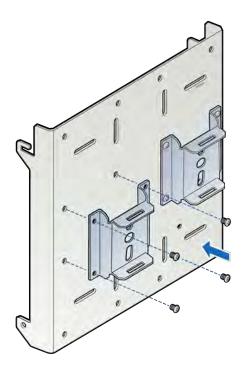

**8** Connect the Ethernet cable RJ45 end to the bottom of the RP.

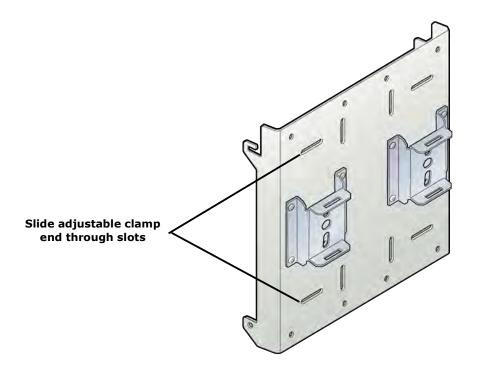

#### **Horizontal pole mount**

**1** Attach mounting brackets to mounting plate.

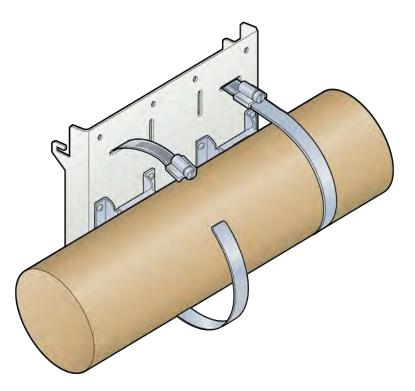

**NOTE:** The torque requirement for the bracket mounting screws is 5-6 in-lbs.

**2** Slide the adjustable clamp through the slots on each RP mounting bracket on the RP plate.

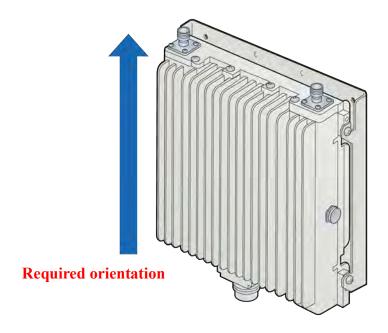

**3** Wrap each clamp around the pole and tighten the clamp screw to secure the RP to the pole.

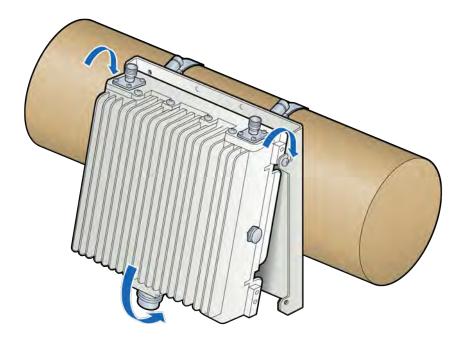

4 Insert two screws into the upper holes on opposite sides of the RP as shown in the drawing below.

Ensure that the RP is oriented correctly with the two antenna connectors at the top of the RP.

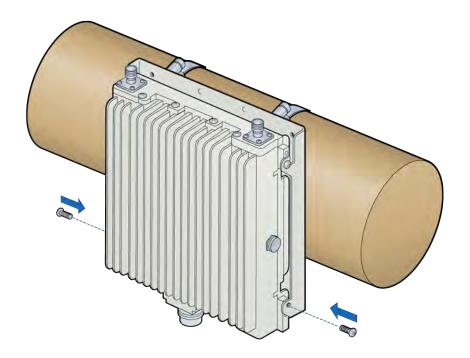

**5** Hang the RP to the mounting bracket using the installed screws. Align holes at bottom location of bracket and install two additional screws.

6 Insert and tighten the bottom screws through the plate hole into both sides of the RP. Be sure that all four screws are tightened.

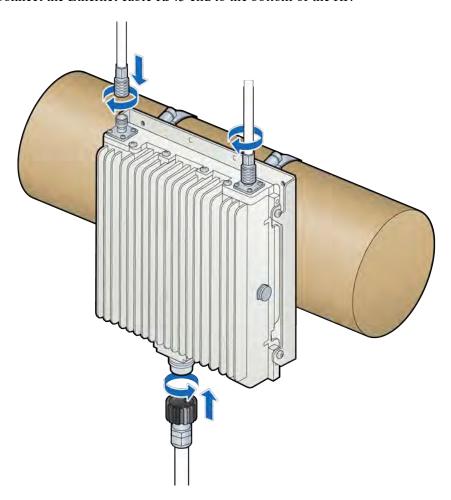

**NOTE:** The torque requirement for the mounting screws is 20-21 in-lbs.

**7** Connect the antenna couplers on the top of the RP.

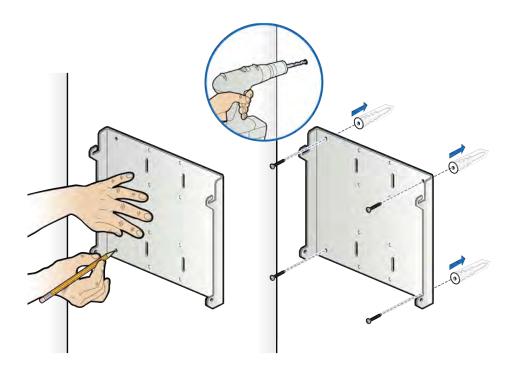

**NOTE:** Check the antenna coupler manufacturer's documentation for torque requirements.

**8** Connect the Ethernet cable RJ45 end to the bottom of the RP.

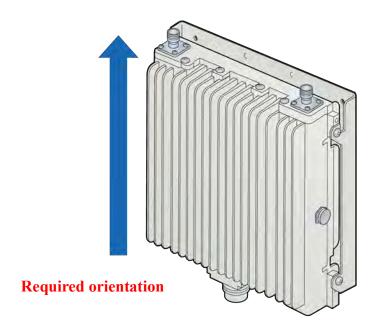

## **Wall mount installation**

1 Drill four holes in the wall using the mounting plate to determine the hole locations. Mount the backplate on the wall with four molly screws.

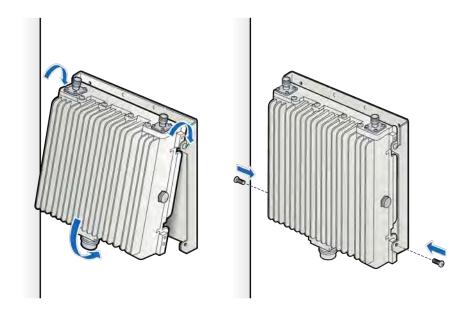

**2** Insert two screws into the upper holes on opposite sides of the RP as shown in the drawing below.

Attach the RP to the mounting plate. Tighten the top screws on the RP and insert and tighten the bottom screws on the RP.

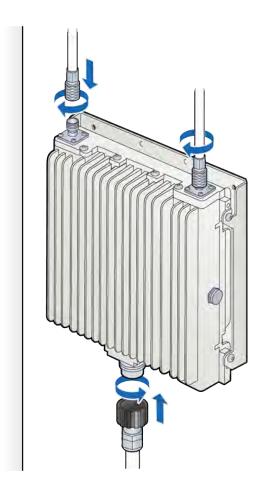

**NOTE:** The torque requirement for the mounting screws is 20-21 in-lbs.

- 4 Insert and tighten the bottom screws through the plate hole into both sides of the RP
- **5** Connect the antenna couplers on the top of the RP.

**NOTE:** Check the antenna coupler manufacturer's documentation for torque requirements.

**6** Connect the Ethernet cable RJ45 end to the bottom of the RP.

# Part III: Appendices

**Appendix A** Safety

Appendix B Installation troubleshooting

**Appendix C** Specifications

**Appendix D** Field Replaceable Units

Appendix E Cable installation and power separation guidelines

# **Appendix A**

## **Safety**

This appendix contains specifications for CommScope ONECELL, including FCC information and technical data.

Radiation Exposure Statement	A-2
Human exposure limits for ONECELL deployments	A-2
FCC ID	A-6

### **Radiation Exposure Statement**

Important: Changes or modifications not expressly approved by CommScope LLC could void your authority to operate the equipment.

#### FCC Part 15

The Baseband Controller and RP5100 have been tested and found to comply with the limits for Class A equipment, pursuant to Part 15 of the FCC Rules.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

For more information, see the publication femtocells and Health at http://www.femtoforum.org or visit the FCC website at www.fcc.gov.

#### EN55032

This equipment is compliant with Class A of EN55032. In a residential environment, this equipment may cause radio interference.

### **Human exposure limits for ONECELL deployments**

The human exposure limits for the ONECELL product is calculated by using the Maximum Permissible Exposure (MPE) method associated with fixed-type transmitter devices at a minimum exposure distance of 20 cm.

This equipment is not suitable for use in locations where children are likely to be present.

Table A-1 includes values for one Radio Point (RP5000 series) and four Radio Points per chassis.

Table A-1. RF exposure for ONECELL at maximum power internal antennas for RP5000 series

Parameter	RPM-A5A11- B66	RPM-A5A11- B02	RPM-I5A11- B01	RPM-I5A11- B03	RPM-I5A11- B07
Tx Power (dBm) per antenna	24.13	24.23	24.25	24.00	24.70
Tx Loss (dB)	0	0	0	0	0
Tx Antenna Gain (dBi)	4	4	4	4	4
Transmitter Duty Cycle %	100	100	100	100	100
Number of Antennas (MIMO)	2	2	2	2	2
Contribution due to multiple antennas (dB)	3.0103	3.0103	3.0103	3.0103	3.0103
Derived Total EIRP (dBW)	1.140	1.240	1.260	1.010	1.710
Bands	66	2	1	3	7
Frequency Range (MHz)	2110-2200	1930-1990	2110-2170	1805-1880	2620-2690
Point Source Total EIRP (watts)	1.300	1.331	1.337	1.262	1.483
Power Density (W/m2) @ 20 cm	2.587	2.647	2.569	2.510	2.950

<sup>1.</sup> For persons with implants, the maximum calculated distance of 30cm. This applies to any combination of up to four radio modules in Bands 1,3 and 7.

For general public and workers, a calculated distance of 20cm was determined. This applies to any combination of up to four radio modules in Bands 2 and 66.

Parameter	RPM-I5A11- B17	RPM-A5A11- B12	RPM-A5A11- B14	RPM-A5A11- B05	RPM-A5A11- B30
Tx Power (dBm) per antenna	21.70	21.88	21.45	21.58	20.99
Tx Loss (dB)	0	0	0	0	0
Tx Antenna Gain (dBi)	4	4	4	2	5

<sup>2.</sup> For general public and workers, a measured distance of 5mm was determined. This applies to any combination of up to four radio modules in Bands 1,3 and 7.

Parameter	RPM-I5A11- B17	RPM-A5A11- B12	RPM-A5A11- B14	RPM-A5A11- B05	RPM-A5A11- B30
Transmitter Duty Cycle %	100	100	100	100	100
Number of Antennas (MIMO)	2	2	2	2	2
Contribution due to multiple antennas (dB)	3.0103	3.0103	3.0103	3.0103	3.0103
Derived Total EIRP (dBW)	-1.290	-1.110	-1.540	-3.410	-1.000
Bands	12	12	14	5	30
Frequency Range (MHz)	734-746	729 - 746	758 - 768	869-894	2350-2360
Point Source Total EIRP (watts)	0.743	0.775	0.702	0.456	0.794
Power Density (W/m2) @ 20 cm	1.478	1.541	1.396	0.907	1.58

Table A-2 includes values for one Radio Point (RP2000 and RP2100) and four Radio Points per chassis.

Table A-2. RF exposure for ONECELL at maximum power internal antennas for RP2000 series

Parameter	Indoor RP-A2014 & RP-I2014		Rugged RP-A2114 & RP-I2114			
Tx Power (dBm) per antenna	21	21	21	21	21	21
Tx Loss (dB)	0	0	0	0	0	0
Tx Antenna Gain (dBi)	0	5	11.8	12	12.5	13.5
Transmitter Duty Cycle %	100	100	100	100	100	100
Number of Antennas (MIMO)	2	2	2	2	2	2
Contribution due to multiple antennas (dB)	3.0103	3.0103	3.0103	3.0103	3.0103	3.0103
Derived Total EIRP (dBW)	-5.990	-0.990	5.810	6.010	6.510	7.510
Bands	12,13,17	1,2,3,4,7,10,25	12,13,17	3	1,2,4,10,25	2620- 2690

#### **FCC ID**

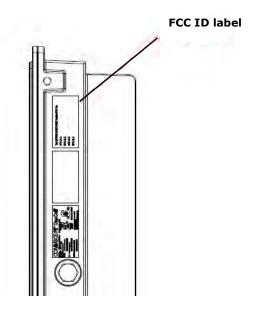

The FCC ID is available on the information labels attached to the RPs.

#### **RP5100** series

For the RP5100i, the FCC ID for each of the installed radio modules is visible when the cover is removed. The drawing below shows the label on the radio module.

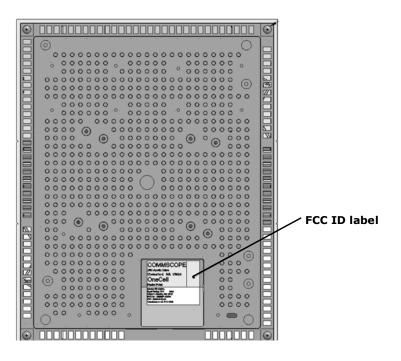

The RP5100r FCC ID is on the label located on the side of device as shown in the drawing below.

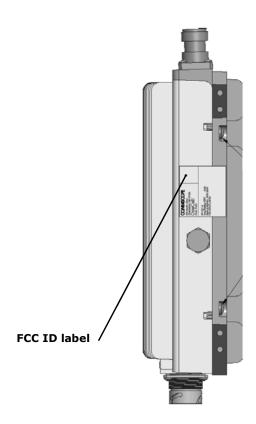

#### **RP2000 series**

The RP2000 FCC ID is on the label located on the back of the device as shown in the drawing below.

The RP2100 FCC ID is on the label located on the side of the device as shown in the drawing below.

## **Installation troubleshooting**

This section contains information on troubleshooting the ONECELL installation. It includes the LED patterns for the Baseband Controller and Radio points.

Baseband Controller LED patterns	B-2
Radio Point LED patterns	B-4

## **Baseband Controller LED patterns**

The Baseband Controller has four LEDs on the front panel. The following table shows

- Display pattern for each LED
- What the pattern indicates
- Action to take, if any, to resolve the issue

LED	Display Pattern	Indicates	Action to Take
STATUS	Green, solid	Power On Sectors up	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Green, blinking	Firmware upgrade from DMS Sectors not up	None
	Amber, blinking	No configuration from DMS	Check DMS availability     Check if the provisioning is correct     Escalate to operator
	OFF	BC rebooting after upgrade	None
	Red, solid*	Error in system - software or hardware issues detected	Replace Baseband Controller Module
RP ERROR	Green, solid	Power On	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Amber, blinking	No Radio Points connected	Check RP cable
	Off	Radio Points connected, firmware upgrade from DMS	None
	Red, blinking	Radio Point alarm - PLL state unlock; service impacting alarm from Radio Point (alarm in one or more RP)	Check 1588 VLAN configuration

LED	Display Pattern	Indicates	Action to Take
TIMING LED	Green, solid	Power On, timing	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Amber, blinking	No timing	Check GPS antenna connection feed
	Off	Firmware upgrade from DMS	None
	Red, solid*	Error in system GPS module down Software/Hardware issues	Replace Baseband Controller Module
CORE LED	Green, solid	Power On Connection to MME	None
	Amber, solid	Self-test failure	Replace Baseband Controller
	Amber, blinking	No connection to MME IPsec is up	<ul><li>Check the MME configuration on the BC</li><li>Check if MME is reachable</li></ul>
	Off	Firmware upgrade from DMS	None
	Red, blinking	Internet connection IPsec down	Check if Security Gateway is reachable     Check security credentials
	Red, solid*	No Internet Interface hardware issues	Replace Baseband Controller Module
* Note: When all of	the LEDs are solid red.	there is a BC hardware failure.	

ONECELL® Hardware Installation, Release 5.5

## **Radio Point LED patterns**

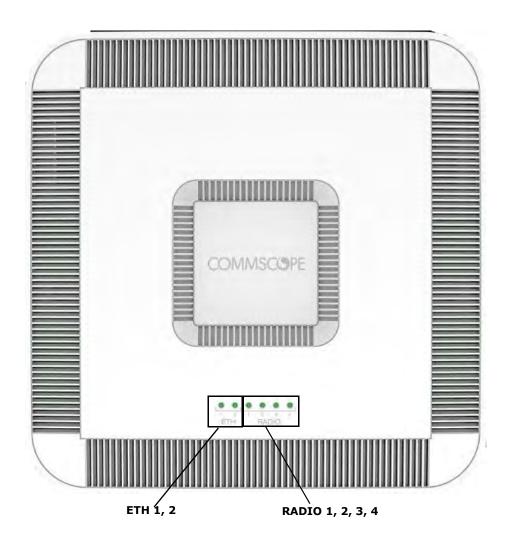

This section contains LED patterns for RP5100 series and RP2000 series.

#### **RP5100i LED patterns**

The Radio Point RP5100i supports six LEDs on the front cover.

Indicators are for

- four radios (one for each)
- ETH 1 MR PORT:POE++, POE+, Ethernet link
- ETH 2– SR PORT:POE++, POE+, Ethernet link

The following table shows:

- Display pattern for each LED
- What the pattern indicates
- Action to take, if any, to resolve the issue

LED	Display Pattern	Indicates	Action to Take
RADIO 1	Green, solid	Power On, transmitting	None
RADIO 2 RADIO 3 RADIO 4	Amber, solid	<ul><li>RFTxState OFF</li><li>No Controller Assigned</li><li>No Timing</li></ul>	Check 1588 VLAN configuration     Verify that the Radio Point is in     STANDBY because more than 32 RPs are connected
	Red, solid	No connection to Controller     HW error     Low Power	Hardware error – replace Radio Point
	Green, blinking	Firmware upgrade	None
	Amber, blinking	RF module Self-Test Failure	Replace Radio Module
Eth 1	Green, solid	Power On, PoE++ power	None
	Amber, solid	Link up, no power	Check that the Ethernet cable is connected to the Radio Point
	Green, blinking	PoE+ power	None
	Amber, blinking	Platform Self-Test Failure	Replace Radio Point
	Red, solid	Ethernet port error	Connect the Ethernet cable between the Baseband Controller and Radio Point     Replace Radio Point
Eth 2	Green, solid	Power On, PoE++ power	None
	Amber, solid	Link up, no power	Check that the Ethernet cable is connected to the Radio Point
	Green, blinking	PoE+ power	None
	Amber, blinking	Platform Self-Test Failure	Replace Radio Point
	Red, solid	Ethernet port error	Connect the Ethernet cable between the Baseband Controller and Radio Point     Replace Radio Point

#### **RP5100r LED patterns**

The Radio Point RP5100r has one LED. The following table includes the LED patterns.

Display Pattern	Indicates	Action to Take
Green, blinking	Not all available radio modules are in use     RFTx ON for all radio modules	No action required
Green, solid	All available radio modules are in use     RFTx ON for all radio modules	No action required
Red, solid	Error in the system.  No module connected to the BC All modules have low power	Replace Radio Point
Red, blinking	No modules in use  Note: The radio modules may be connected to the BC.	<ul> <li>Check the connection between the RP and BC.</li> <li>Check that the BC admin status is UP.</li> </ul>
Green, fast blinking	Software upgrade	No action required

#### **RP2000 series LED patterns**

The RP2000 and RP2100 Radio Points have one LED. The LED for the RP2000 (Indoor) is on the front cover. The LED for the RP2100 (Rugged) is on the bottom of the Radio Point where the Ethernet cable port is located. The following table shows:

- Display pattern for each LED
- What the pattern indicates
- Action to take, if any, to resolve the issue

LED	Display Pattern	Indicates	Action to Take
STATUS	Green, solid	Power On RFTx state is ON	None
	Amber, solid	Self-test failure	Replace RP
	Green, blinking	Firmware upgrade Connected to Baseband Controller	None
	Amber, blinking	PLL state – unlock RFTx state – OFF or suspended L2 path verification failed Admin state – STANDBY	Check 1588 VLAN configuration     Verify RP is in STANDBY because more than 32 Radio Points are connected to the same Baseband Controller
	Red, blinking	No connection to Baseband Controller (http)	Connect the Ethernet cable between the Baseband Controller and Radio Point     Replace RP
	Red, solid	Error in system – software or hardware issues Interface issues detected AdminState – UNLOCKED	Connect the Ethernet cable between the Baseband Controller and Radio Point     Upgrade Radio Point     Replace Radio Point

## **Specifications**

This appendix contains specifications for CommScope ONECELL, including FCC information and technical data.

Environmental and physical specifications	C-1
SPF/SPF+ specifications	C-3

## **Environmental and physical specifications**

The following table lists the electrical ratings and technical data for the Baseband Controller, RP5100 series and RP2000/RP2100.

Table C-1. Environmental and Physical specifications

<b>Baseband Controller</b>	
Environmental	Operating Temperatures: 0°C to 40°C Operating Humidity 10%-90% Non-Condensing
Power Requirements	120/230 VAC,1.7/0.85 A, 50/60 Hz
Power Consumption	204W Typical / 216W Maximum
Dimensions	1 Rack Unit Chassis hosts 2 Baseband Controller module units 19" W x 1.75" H x 18.8" D (483mm W x 44.4mm H x 477mm D)
Weight	Single BC 13.1 lbs (5.9 kg) Dual BC 19.1 lbs. (8.7 kg)
RP5100i	

 Table C-1. Environmental and Physical specifications (continued)

	†	
Environmental	Operating Temperatures: 0 to 50°C (Plenum rated: UL-2043) Operating Humidity 10%-95% Non-Condensing Operating temperatures: 0°C to 50°C Active Cooling/Fans, acoustic noise: 39.5 dBA at 25C	
Power Requirements	IEEE802.3bt-type 4 PoE++	
Tower Requirements	IEEEou2.301-type 4 POE++	
Power Consumption	Up to: 72W (26W + 11.5W per RM)	
Dimensions	13.54" W x13.54 H x 3.35" D (344.0 mm W x 344.0 mm H x 85.0 mm D)	
Weight	8.82 lbs (4 kg)	
RP5100r		
Environmental	Operating Temperatures: 0 to 50°C (Plenum rated: UL-2043) Operating Humidity 10%-95% Non-Condensing Operating temperatures: 0°C to 50°C Active Cooling/Fans, acoustic noise: 39.5 dBA at 25C	
Power Requirements	IEEE802.3bt-type4 PoE++	
Power Consumption	Up to: 72W (26W + 11.5W per RM)	
Dimensions	14.9" W x 12.64" H x 4.06" D (378.7 mm W x 321.1 mm H x 102.5 mm D)	
Weight	21.7 lbs (9.85 kg)	
RP2000		
Environmental	Operating Temperatures:0°C to 50°C (Plenum rated: UL-2043) Operating Humidity: 10%-95% Non-Condensing	
Power Requirements	802.3at PoE+	
Power Consumption	22W Typical / 25.5W Maximum	
Dimensions	7.4" W x 9.25" H x 1.75" D (188mm W x 235mm H x 45mm D)	
Weight	2.6 lbs (1.2 kg)	
RP2100		
Environmental	Operating Temperatures: -40C to 60°C	
Power Requirements	802.3at PoE+	
Power Consumption	22W Typical / 25.5W Maximum	

Table C-1. Environmental and Physical specifications (continued)

Dimensions	9.3" W x 9.1" H x 3.0" D (236mm W x 230mm H x 76mm D)
Weight	8 lbs (0.6 kg)

## **SPF/SPF+ specifications**

The following table lists the SPF and SPF+ specifications required for the Baseband Controller.

1G SFP LC SX Transceiver; 220M to 1K M
1G SFP LC LX transceiver, 550M 10K M
10G SFP+ LC SR Transceiver; Multi mode 26M to 300M
SFP-10G-LR Transceiver; Single mode 10KM
10G Direct attach SFP+ cable; Twin ax Cable; 7M (must be compatible with HP & Cisco switches
