Frequency range 9 kHz – 18 GHz

LTE QPSK MODULATION. BW = 1.4 MHz

Lowest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Middle Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Highest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

LTE QPSK MODULATION. BW = 3 MHz

Lowest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Middle Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Highest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

LTE QPSK MODULATION. BW = 5 MHz

Lowest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Middle Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Highest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

LTE QPSK MODULATION. BW = 10 MHz

Lowest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Middle Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Highest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

LTE QPSK MODULATION. BW = 15 MHz

Lowest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Middle Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

Highest Channel
The spurious signals were detected more than 10 dB below the limit in the frequency range.

TEST A.6: SPURIOUS EMISSIONS AT ANTENNA TERMINALS AT BLOCK EDGES

LIMITS:	Product standard:	FCC Part 90
	Test standard:	FCC §2.1051 and 90.691

LIMITS

According to specification, the power of emissions shall be attenuated below the transmitter power (P) by a factor of at least 43 + 10 log (P) dB P in watts.

At Po transmitting power of 2 watts (33 dBm), the specified minimum attenuation becomes 43+10log (Po). and the level in dBm relative to Po becomes:

Po (dBm) – [43 + 10 log (Po in watts)] = -13 dBm

TEST SETUP	

The EUT RF output connector was connected to a spectrum analyzer and to the Universal Radio Communication Tester R&S CMW500 (selecting maximum transmission power of the EUT and different modes of modulation) using a 50-ohm attenuator and a power splitter.

The reading of the spectrum analyzer is corrected with the attenuation loss of connection between output terminal of EUT and input of the spectrum analyzer.

For LTE mode the configuration of modulation which is the worst case for conducted power was used.

As indicated in FCC part 90, in the 1 MHz bands immediately outside and adjacent to the licensee's frequency block or band, a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed.

TEST A.7: RADIATED EMISSIONS

LIMITS:	Product standard:	FCC Part 90.
	Test standard:	FCC §2.1051

LIMITS

According to specification, the power of emissions shall be attenuated below the transmitter power (P) by a factor of at least 43 + 10 log (P) dB. P in watts.

At Po transmitting power of 2 watts (33 dBm), the specified minimum attenuation becomes 43+10log (Po). and the level in dBm relative to Po becomes:

Po (dBm) – [43 + 10 log (Po in watts)] = -13 dBm

| **TEST SETUP**	

The measurement was performed with the EUT inside an anechoic chamber. The spectrum was scanned from 30 MHz to at least the 10th harmonic of the highest frequency generated within the equipment.

The EUT was placed on a non-conductive stand at a 3-meter distance from the measuring antenna for measurements below 1 GHz and at 1-meter distance for measurements above 1 GHz.

Detected emissions were maximized at each frequency by rotating the EUT and adjusting the measuring antenna height and polarization. The maximum reading was recorded.

Radiated measurements < 1GHz
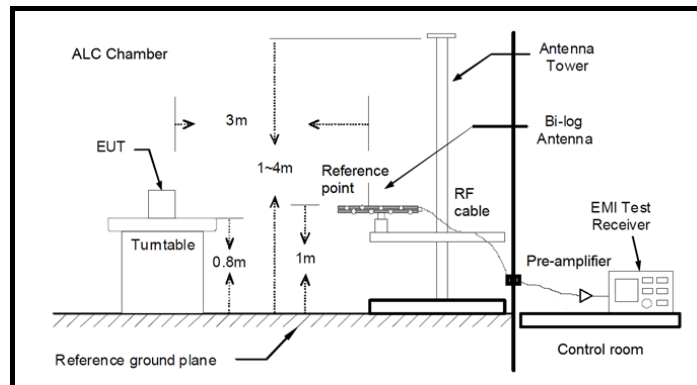

Radiated measurements > 1GHz
TESTED SAMPLES:	S/01
TESTED CONDITIONS MODES:	TC#01
TEST RESULTS:	PASS

RESULTS

A preliminary scan determined the QPSK 3 MHz bandwidth as the worst case. The configuration of Resource Blocks which is the worst case for conducted power was used.
The following plots show the results for this configuration.

LTE QPSK MODULATION. RB = 1. Offset = 0. BW = 3 MHz
