Request for Class II Permissive Change

FCC ID: QIPEHS6

Date: March 08, 2016

To: Federal Communication Commission

Please be notified that we, the undersigned, Gemalto M2M GmbH declare that the reasons for this Class II permissive change are as below:

The GWM300 is a compact GSM/UMTS modem base on EHS6 module. The main function of GWM300, like data transferring, is using EHS6. Besides this module, GWM300 also add some other circuits, such as: DC/DC converter, auto power on circuit, signal level shifter and connectors. All these circuits and EHS6 module are mounted in one PCB, and covered by a plastic housing.

Thanks you.
Sincerely,

Thorsten Liebig/ Manager Approval
