Request for Class II Permissive Change

FCC ID: QIPEHS8

Please be notified that we, the undersigned, Gemalto M2M GmbH declare that the reasons for this Class II permissive change are as below:

The final design EHS8 (HW version: B2.1) product was a revision from last builds of EHS8 (HW version: B2).

They take use of the same PCB layer-up and 2D dimension, and there are only a few schematic, PCB layout and matching parts assembly BOM changes. The schematics of RF part as well as the major logic unit were kept unchanged.

The noticeable minor change from EHS8 (HW version: B2) to EHS8 (HW version: B2.1) is the "changing NOR memory to NAND memory".

Axel Heike
Certification Manager

Lars Wehmeier
Head of System Test
