

FCC RF Test Report

Product Name: Smart Phone

Model Number: BLA-L29

Report No: SYBH(Z-RF)006092017-2001 FCC ID: QISBLA-L29

Reliability Laboratory of Huawei Technologies Co., Ltd.

(Global Compliance and Testing Center of Huawei Technologies Co., Ltd)

Administration Building, Headquarters of Huawei Technologies Co., Ltd., Bantian, Longgang District, Shenzhen, 518129, P.R.C Tel: +86 755 28780808 Fax: +86 755 89652518

Notice

1. The laboratory has passed the accreditation by China National Accreditation Service for Conformity Assessment (CNAS). The accreditation number is L0310.

2. The laboratory has passed the accreditation by The American Association for Laboratory Accreditation (A2LA). The accreditation number is 2174.01

3. The laboratory has been recognized by the US Federal Communications Commission (FCC) to perform compliance testing subject to the Commission's Declaration Of Conformity (DOC) and Certification rules. The Designation Number is CN1173, and the Test Firm Registration Number is 294140.

4. The laboratory has been listed by Industry Canada to perform electromagnetic emission measurements. The recognition numbers of test site are 6369A-1.

5. The laboratory (Reliability Lab of Huawei Technologies Co., Ltd) is also named "Global Compliance and Testing Center of Huawei Technologies Co., Ltd", the both names have coexisted since 2009.

6. The test report is invalid if not marked with the signatures of the persons responsible for preparing and approving the test report.

7. The test report is invalid if there is any evidence of erasure and/or falsification.

8. The test report is only valid for the test samples.

9. Content of the test report, in part or in full, cannot be used for publicity and/or promotional purposes without prior written approval from the laboratory.

Applicant:	Huawei Technologies Co., Ltd.
Address: Administration Building, Headquarters of Huawei Technologies C	
	Bantian, Longgang District, Shenzhen, 518129, P.R.C

Date of Receipt Sample:	2017-08-28
Start Date of Test:	2017-08-28
End Date of Test:	2017-09-22

Test Result: Pass

Approved by Senior2017-09-25Roger ZhangRoger ZhangEngineer:DateNameSignature

1 General Information

1.1 Applied Standard		
Applied Rules:	47 CFR FCC Part 02	
	47 CFR FCC Part 22	
	47 CFR FCC Part 24	
	47 CFR FCC Part 27	
Test Method:	FCC KDB 971168 D01 Power Meas License Digital Systems v02r02	
1.2 Test Location		
Test Location :	Reliability Laboratory of Huawei Technologies Co., Ltd.	
Address:	Administration Building, Headquarters of Huawei Technologies Co., Ltd.,	
	Bantian, Longgang District, Shenzhen, 518129, P.R.C	
1.3 Test Environment C	ondition	
Ambient Temperature:	19.5 to 25 °C	
Ambient Relative Humidity: 40 to 55 %		
Atmospheric Pressure:	Not applicable	

2 Test Summary

2.1 Cellular Band (824-849 MHz paired with 869-894 MHz)

Test Item	FCC Rule No.	Requirements	Test Result	Verdict (Note1)		
Effective (Isotropic) Radiated Power Output Data	§2.1046, §22.913	FCC: ERP ≤ 7 W.	Appendix A	Pass		
Peak-Average Ratio		Limit≤13 dB	Appendix B	Pass		
Modulation Characteristics	§2.1047	Digital modulation	Appendix C	Pass		
Bandwidth	§2.1049	OBW: No limit. EBW: No limit.	Appendix D	Pass		
Band Edges Compliance	§2.1051, §22.917	≤ -13 dBm/1%*EBW, in 1 MHz bands immediately outside and adjacent to the frequency block.	Appendix E	Pass		
Spurious Emission at Antenna Terminals	§2.1051, §22.917	FCC: ≤ -13 dBm/100 kHz, from 9 kHz to 10 th harmonics but outside authorized operating frequency ranges.	Appendix F	Pass		
Field Strength of Spurious Radiation	§2.1053, §22.917	FCC: ≤ -13 dBm/100 kHz.	Appendix G	Pass		
Frequency Stability	§2.1055, §22.355	≤ ±2.5ppm.	Appendix H	Pass		
NOTE: For the vero	NOTE: For the verdict, the "N/A" denotes "not applicable", the "N/T" denotes "not tested".					

2.2 PCS Band (1850-1910 MHz paired with 1930-1990 MHz)

Test Item	FCC Rule No.	Requirements	Test Result	Verdict (Note1)
Effective				
(Isotropic)	§2.1046,	EIRP ≤ 2 W	Appendix A	Pass
Radiated Power	§24.232		Appendix A	F 855
Output Data				
Peak-Average	§2.1046,	Limit≤13 dB	Appendix B	Pass
Ratio	§24.232		Аррепаіх в	F 855
Modulation	§2.1047	Digital modulation	Appendix C	Pass
Characteristics	92.1047	Digital modulation	Appendix C	F 855
Bandwidth	§2.1049	OBW: No limit.	Appendix D	Pass
Banuwiutin	§2.1049	EBW: No limit.	Appendix D	F 833
Band Edges	§2.1051,	≤ -13dBm/1%*EBW, in 1 MHz		
Compliance	§24.238	bands immediately outside and	Appendix E	Pass
Compliance	924.230	adjacent to the frequency block.		
Spurious		≤ -13dBm/1 MHz, from 9 kHz to		
Emission at	§2.1051,	10 th harmonics but outside	Appendix F	Pass
Antenna	§24.238	authorized operating frequency	Appendix F	F d 55
Terminals		ranges.		
Field Strength of	82 1052			
Spurious	§2.1053,	≤ -13 dBm/1 MHz.	Appendix G	Pass
Radiation	§24.238			
Frequency	§2.1055,	<	A man and the lat	Dava
Stability	§24.235	≤ ±2.5 ppm.	Appendix H	Pass
NOTE: For the	verdict, the "N/A" denotes "not a	applicable", the "N/T" denotes "not test	ed".	

2.3 AWS Band (1710-1755 MHz paired with 2110-2155 MHz)

Test Item	FCC Rule No.	Requirements	Test Result	Verdict (Note1)	
Effective (Isotropic) Radiated Power Output Data	§2.1046, §27.50(d)	EIRP ≤ 1 W	Appendix A	Pass	
Peak-Average Ratio	§2.1046, §27.50(d)	Limit≤13 dB	Appendix B	Pass	
Modulation Characteristics	§2.1047	Digital modulation	Appendix C	Pass	
Bandwidth	§2.1049	OBW: No limit. EBW: No limit.	Appendix D	Pass	
Band Edges Compliance	§2.1051, §27.53(h)	 ≤ -13dBm/1%*EBW, in 1 MHz bands immediately outside and adjacent to the frequency block. 	Appendix E	Pass	
Spurious Emission at Antenna Terminals	§2.1051, §27.53(h)	 ≤ -13dBm/1 MHz, from 9 kHz to 10th harmonics but outside authorized operating frequency ranges. 	Appendix F	Pass	
Field Strength of Spurious Radiation	§2.1053, §27.53(h)	≤ -13 dBm/1 MHz.	Appendix G	Pass	
Frequency Stability	§2.1055, §27.54	≤ ±2.5 ppm.	Appendix H	Pass	
NOTE: For the verdict, the "N/A" denotes "not applicable", the "N/T" denotes "not tested".

3 Description of the Equipment under Test (EUT)

3.1 General Description

BLA-L29 is subscriber equipment in the LTE/ WCDMA/GSM system. The LTE frequency band is Band 1,Band 2,Band 3,Band 4,Band 5, Band 6, Band 7,Band 8, Band 9,Band 12,Band17, Band 18,Band 19, Band 20, Band 26, Band 28, Band 32,Band 34,Band 38,Band39, Band 40 and Band 41. The HSUPA/HSDPA/UMTS frequency band is Band I, Band II, Band IV, Band V, Band VI, Band VIII and Band XIX, The GSM/GPRS/EDGE frequency band includes GSM850 and GSM900 and DCS1800 and PCS1900, The Mobile Phone implements such functions as RF signal receiving/transmitting, LTE/ WCDMA /GSM protocol processing, voice, video, MMS service, GPS, NFC and WIFI etc. Externally it provides earphone port (to provide voice service) and dual USIM card interfaces. It also provides Bluetooth module to synchronize data between a PC and the phone, or to use the built-in modem of the phone to access the Internet with a PC, or to exchange data with other Bluetooth devices.

NOTE:Only GSM850/1900,UMTS Band II/IV/V,LTE Band 2/4/5/7/12/17/38/41 test data included in this report.

3.2 EUT Identity

NOTE: Unless otherwise noted in the report, the functional boards installed in the units shall be selected from the below list, but not means all the functional boards listed below shall be installed in one unit.

3.2.1 Board

Board				
Description	Hardware Version	Software Version

	LTE BAND41:	13M5G7D (15 MHz QPSK modulation),
		13M5W7D (15 MHz 16QAM modulation)
		18M0G7D (20 MHz QPSK modulation),
		18M0W7D (20 MHz 16QAM modulation)

4 General Test Conditions / Configurations

4.1 Test Modes

NOTE: The test mode(s) are selected according to relevant radio technology specifications.

Test Mode	Test Modes Description		
GSM/TM1	GSM system, GSM/GPRS, GMSK modulation		
GSM/TM2	GSM system, EDGE, 8PSK modulation		
UMTS/TM1	WCDMA system, QPSK modulation		
LTE/TM1	LTE system, QPSK modulation		
LTE/TM2	LTE system, 16QAM modulation		

4.2 Test Environment

Environment Parameter	Selected Values During Tests	
Relative Humidity	Ambient	
Temperature	TN Ambient	
	VL	3.6V
Voltage	VN	3.82V
	VH	4.35V

NOTE: VL= lower extreme test voltage

VN= nominal voltage

VH= upper extreme test voltage

TN= normal temperature

4.3 Test Frequency

Test Mode	TX/RX		RF Channel

4.4 DESCRIPTION OF TESTS

4.4.1 Radiated Power and Radiated Spurious Emissions

Radiated spurious emissions are investigated indoors in a semi-anechoic chamber to determine the frequencies producing the worst case emissions. Final measurements for radiated power and radiated spurious emissions are performed on the 3 meter OATS per the guidelines of ANSI/TIA-603-C-2004. The equipment under test was transmitting while connected to its integral antenna and is placed on a wooden turntable 80cm above the ground plane and 3 meters from the receive antenna. The spectrum is scanned from the lowest frequency generated in the equipment up to a frequency including its 10th harmonic. The receive antenna height is adjusted between 1 and 4 meter height, the turntable is rotated through 360 degrees, and the EUT is manipulated through all orthogonal planes representative of its typical use to achieve the highest reading on the receive spectrum analyzer. Emissions are also investigated with the receive antenna horizontally and vertically polarized.

A portable or small unlicensed wireless device shall be placed on a non-metallic test fixture or other non-metallic support during testing. The supporting fixture shall permit orientation of the EUT in each of three orthogonal (x, y, z) axis positions such that emissions from the EUT are maximized. Measure the EUT maximum RF power and record the result.

A half-wave dipole is then substituted in place of the EUT. For emissions above 3GHz, a horn antenna is substituted in place of the EUT. The substitute antenna is driven by a signal generator with the level of the signal generator being adjusted to obtain the same receive spectrum analyzer level previously recorded from the spurious emission from the EUT.

The power of the emission is calculated using the following formula:

 $P_{d [dBm]} = P_{g [dBm]} - cable loss [dB] + antenna gain [dBd/dBi]$

Where, P_d is the dipole equivalent power, P_g is the generator output into the substitution antenna, and the antenna gain is the gain of the substitute antenna used relative to either a half-wave dipole (dBd) or an isotropic source (dBi). The substitute level is equal to Pg [dBm] – cable loss [dB].

The calculated Pd levels are then compared to the absolute spurious emission limit of -13dBm which is equivalent to the required minimum attenuation of 43 + 10log₁₀(Power [Watts]).

Test Procedures Used

ANSI/TIA-603-C-2004-Section 2.2.17 / ANSI/TIA-603-C-2004-Section 2.2.12

Note: Reference test setup 3

4.4.2 Peak-Average Ratio

A peak to average ratio measurement is performed at the conducted port of the EUT. For WCDMA signals, the spectrum analyzers Complementary Cumulative Distribution Function (CCDF) measurement profile is used to determine the largest deviation between the average and the peak power of the EUT in a given bandwidth. The CCDF curve shows how much time the peak waveform spends at or above a given average power level. The percent of time the signal spends at or above the level defines the probability for that particular power level. For GSM signals, an average and a peak trace are used on a spectrum analyzer to determine the largest deviation between the average and the peak power of the EUT in a bandwidth greater than the emission bandwidth. The traces are generated with the spectrum analyzer set to zero span mode.

Test Procedures Used

KDB 971168 v02r02-Section 5.7.1

Test Settings

- 1. The signal analyzer's CCDF measurement profile enabled
- 2 Frequency= carrier center frequency
- 3、Measurement BW > EBW of signal
- 4、 for continuous transmissions, set to 1ms
- 5、Record the maximum PAPR level associated with a probability of 0.1%.

Note: Reference test setup 1

4.4.3 Occupied Bandwidth

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured. The span of the analyzer shall be set to capture all products of the modulation process, including the emission skirts. The resolution bandwidth shall be set to as close to 1 percent of the selected span as is possible without being below 1 percent. The video bandwidth shall be set to 3 times the resolution bandwidth. Video averaging is not permitted. Where practical, a sampling detector shall be used since a peak or, peak hold, may produce a wider bandwidth than actual. The trace data points are recovered and are directly summed in linear terms. The recovered amplitude data points, beginning at the lowest frequency, are placed in a running sum until 0.5 percent of the total is reached and that frequency recorded. The process is repeated for the highest frequency data points. This frequency is recorded. The span between the two recorded frequencies is the occupied bandwidth.

Test Procedures Used

KDB 971168 v02r02-Section 4.2

Test Settings

- $1\,{\scriptstyle \smallsetminus}\,$ SET RBW=1-5% of OBW
- 2、SET VBW ≥ 3*RBW
- 3、Detector: Peak
- 4、Trace mode= max hold.
- 5、Sweep= auto couple
- 6、Steps 1-5 were repeated after it is stable

Note: Reference test setup 1.

4.4.4 Band Edge Compliance

the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. The emission power must be attenuated below the transmitting power (P) by a factor of at least $43+10\log_{10}P$ dB.

Test Procedures Used

KDB 971168 v02r02-Section 6.0

Test Settings

- 1 $\$ SET RBW ≥ 1% of Emission BW.
- 2、SET VBW about three times of RBW
- 3、Detector: RMS
- 4、Trace mode= max hold.
- 5、Span= 2MHz

Note: Reference test setup 1.

4.4.5 Spurious and Harmonic Emissions at Antenna Terminal

The level of the carrier and the various conducted spurious and harmonic frequencies is measured by means of a calibrated spectrum analyzer. The spectrum is scanned from the lowest frequency generated in the equipment up to a frequency including its 10th harmonic. On any frequency outside a licensee's frequency block, the power of any emission shall be attenuated below the transmitter power (P) by at least 43 + 10 log(P) dB. Compliance with these provisions is based on the use of measurement instrumentation employing a resolution bandwidth of 1 MHz or greater. However, in the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, outside of which all emission are attenuated at least 26 dB below the transmitter power.

Test Procedures Used

KDB 971168 v02r02-Section 6.0

Test Settings

1、9kHz~150kHz, RBW = 1KHz, VBW \geq 3×RBW,

150kHz~30MHz, RBW = 10KHz, VBW \geq 3×RBW,

30MHz~1GHz, RBW = 100 kHz, VBW = 300 kHz.

Above 1GHz, RBW = 1 MHz, VBW = 3 MHz.

- 2、Detector: Peak
- 3, Trace mode= max hold.

Note: Reference test setup 1.

4.4.6 Frequency Stability / Temperature Variation

Frequency stability testing is performed in accordance with the guidelines of ANSI/TIA-603-C-2004. The frequency stability of the transmitter is measured by:

a.) **Temperature:** The temperature is varied from -30°C to +50°C in 10°C increments using an environmental chamber.

b.) **Primary Supply Voltage:** The primary supply voltage is varied from 85% to 115% of the nominal value for non hand-carried battery and AC powered equipment. For hand-carried, battery-powered equipment, primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacturer.

Specification – The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block. The frequency stability of the transmitter shall be maintained within $\pm 0.00025\%$ (± 2.5 ppm) of the center frequency.

Time Period and Procedure:

1. The carrier frequency of the transmitter is measured at room temperature (20°C to provide a reference).

2. The equipment is turned on in a "standby" condition for fifteen minutes before applying power to the transmitter. Measurement of the carrier frequency of the transmitter is made within one minute after applying power to the transmitter.

3. Frequency measurements are made at 10°C intervals ranging from -30°C to +50°C. A period of at least one half-hour is provided to allow stabilization of the equipment at each temperature level.

Test Procedures Used

ANSI/TIA-603-C-2004

Note: Reference test setup 2.

4.5 Test Setups

4.5.1 Test Setup 1

4.5.2 Test Setup 2

4.5.3 Test Setup 3

NOTE: Effective radiated power (ERP) and Equivalent Isotropic Radiated Power(EIRP) refers to the radiation power output of the EUT, assuming all emissions are radiated from half-wave dipole antennas.

4.5.3.1 Step 1: Pre-test

4.5.3.2 Step 2: Substitution method to verify the maximum ERP/EIRP

Signal Generator	Agilent	E4438C	MY49071538	2016/12/15	2017/12/14
Power Detecting & Sampling Unit	R&S	OSP-B157	100914	2017/7/31	2018/7/30
Software Information					
Test Item	Software Name		Manufacturer		Version
RSE	EMC32		R&S		V8.40.0

6 Measurement Uncertainty

For a 95% confidence level (k = 2), the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 as following:

Test Item		Extended Uncertainty	
Transmit Output Power Data	Power [dBm]	U = 0.42 dB	
Bandwidth	Magnitude [%]	U = 0.2%	
Band Edge Compliance	Disturbance Power [dBm]	U = 1.24 dB	
Spurious Emissions, Conducted	Disturbance Power [dBm]	U = 1.62 dB	
Field Strength of Spurious Radiation	ERP [dBm]	For 3 m Chamber:	
		U = 4.9 dB (30 MHz to 26.5GHz)	
Frequency Stability	Frequency Accuracy [ppm]	U = 0.017 ppm	

7 Appendixes

Appendix No.	Description
SYBH(Z-RF)006092017-2001-A	Appendix _ for _GSM
SYBH(Z-RF)0060920172001-B	Appendix _f or _WCDMA
SYBH(Z-RF)0060920172001-C	Appendix _for _LTE Band2
SYBH(Z-RF)0060920172001-D	Appendix _for _LTE Band4
SYBH(Z-RF)0060920172001-E	Appendix _for _LTE Band5
SYBH(Z-RF)0060920172001-F	Appendix _for _LTE Band7
SYBH(Z-RF)0060920172001-G	Appendix _for _LTE Band12
SYBH(Z-RF)0060920172001-H	Appendix _for _LTE Band17
SYBH(Z-RF)0060920172001-I	Appendix _for _LTE Band38
SYBH(Z-RF)0060920172001-J	Appendix _for _LTE Band41

Appendix	Description
Appendix A	Effective (Isotropic) Radiated Power Output Data
Appendix B	Peak-Average Ratio
Appendix C	Modulation Characteristics
Appendix D	Bandwidth
Appendix E	Band Edges Compliance
Appendix F	Spurious Emission at Antenna Terminals
Appendix G	Field Strength of Spurious Radiation
Appendix H	Frequency Stability

Note: For the RSE data we tested ant1&ant2, the data presented is all the antenna mode; the other items we tested all antenna modes, but the data presented is the worst antenna mode

END
