TÜV SÜD Certification and Testing (China) Co., Ltd. – Shenzhen Branch is a subcontractor to TÜV SÜD Product Service GmbH according to the principles outlined in ISO 17025.

TÜV SÜD Certification and Testing (China) Co., Ltd. – Shenzhen Branch reports apply only to the specific samples tested under stated test conditions. Construction of the actual test samples has been documented. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. The manufacturer/importer is responsible to the Competent Authorities in Europe for any modifications made to the production units which result in non-compliance to the relevant regulations. TÜV SÜD Certification and Testing (China) Co., Ltd. – Shenzhen Branch shall have no liability for any deductions, inferences or generalizations drawn by the client or others from TÜV SÜD Certification and Testing (China) Co., Ltd. – Shenzhen Branch issued reports.

This report is the confidential property of the client. As a mutual protection to our clients, the public and ourselves, extracts from the test report shall not be reproduced except in full without our written approval

| FCC Part 18<br>10-1-18 Edition | Industrial, Scientific, and Medical equipment |
|                                |   |

# 5. Summary of Test Results

| Technical Requirements      |                                  |            |             |  |  |  |
|-----------------------------|----------------------------------|------------|-------------|--|--|--|
| FCC Part 18 10-1-18 Edition |                                  |            |             |  |  |  |
| Test Condition              | -                                | Pages      | Test Result |  |  |  |
| §18.307                     | Conducted emission AC power port | 10         | Pass        |  |  |  |
| §18.301                     | Operating frequencies            |            | N/A         |  |  |  |
| §18.305                     | Field strength                   | 13         | Pass        |  |  |  |
| §18.309                     | Frequency range                  | See note 2 | Pass        |  |  |  |
| §18.303                     | Prohibited frequency bands       | See note 3 | Pass        |  |  |  |

Note 1: N/A=Not Applicable.

Note 2: Because the highest frequency of the internal sources of the EUT is less than 108MHz, so the measurement only is made up to 1GHz.

Note 3: The fundamental frequency of this product is 111-148kHz. Outside the band specified of §18.303, it is considered sufficiently to comply with the provisions of this section.

## 6. General Remarks

#### Remarks

This submittal(s) (test report) is intended for FCC ID: QISCP80-1, complies with FCC Part 18.

#### SUMMARY:

All tests according to the regulations cited on page 5 were

- Performed
- I Not Performed

The Equipment under Test

- - Fulfills the general approval requirements.
- □ **Does not** fulfill the general approval requirements.

| Sample Received Date: | March 19, 2020 |

# 7. Test Setups

### Below 30MHz

30MHz-1GHz

### AC Power Line Conducted Emission test setups

# 8. Systems test configuration

Auxiliary Equipment Used during Test:

| Description    | Manufacturer | Model NO. | S/N |
|----------------|--------------|-----------|-----|
| Wireless Watch | HUAWEI       |           |     |
| Adapter        | HUAWEI       |           |     |

### 9.1 Conducted Emission Test

#### **Test Method**

- 1. The EUT was placed on a table, which is 0.8m above ground plane
- 2. The power line of the EUT is connected to the AC mains through an Artificial Mains Network (A.M.N.).
- 3. Maximum procedure was performed to ensure EUT compliance
- 4. A EMI test receiver is used to test the emissions from both sides of AC line

#### Limit

According to §18.307, conducted emissions limit as below:

| Frequency   | QP Limit | AV Limit |
|-------------|----------|----------|
| IVIEZ       | ασμν     | ασμν     |
| 0.150-0.500 | 66-56*   | 56-46*   |
| 0.500-5     | 56       | 46       |
| 5-30        | 60       | 50       |

\*Decreasing linearly with logarithm of the frequency

#### Remark:

Level=Reading Level + Correction Factor

Correction Factor=Cable Loss + LISN Factor

(The Reading Level is recorded by software which is not shown in the sheet)

### 9.2 Radiated Emission Test for 9KHz-30MHz

#### **Test Method**

1: Field strength measurements are made in the frequency range of 9 kHz to 30 MHz using a calibrated loop antenna as specified in ANSI C63.4 clause 4.5.2, positioned with its plane vertical at the specified distance from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. The center of the loop shall be 1 m above the ground. This method is applicable for radiated radio-noise measurements from all units, cables, power cords, and interconnect cabling or wiring.

2: For certain applications, the loop antenna plane may also need to be positioned horizontally at the specified distance from the EUT.

#### Limits

According to §18.305, Field strength limit as below:

| Equipment  | Operating frequency   | RF Power          | Field strength limit | Distance         |  |  |  |
|--|-----------------------|-------------------|----------------------|------------------|--|--|--|
|  |                       | generated by      | (uV/m)               | (meters)         |  |  |  |
|  |                       | equipment (watts) |                      |                  |  |  |  |
| Any type   | Any ISM frequency     | Below 500         | 25                   | 300              |  |  |  |
| unless   |                       | 500 or more       | 25 × SQRT(power/500) | <sup>1</sup> 300 |  |  |  |
| otherwise  | Any non-ISM frequency | Below 500         | 15                   | 300              |  |  |  |
| specified  |                       | 500 or more       | 15 × SQRT(power/500) | <sup>1</sup> 300 |  |  |  |

| cooking ranges   | On or above 90 kHz    | Anv               | 300                  | <sup>4</sup> 30  |  |  |  |
|  |                       | ,,                |                      |                  |  |  |  |
| <sup>1</sup> Field strength may not exceed 10 µV/m at 1600 meters. Consumer equipment operating below 1000 |                       |                   |                      |                  |  |  |  |

<sup>1</sup>Field strength may not exceed 10  $\mu$ V/m at 1600 meters. Consumer equipment operating below 1000 MHz is not permitted the increase in field strength otherwise permitted here for power over 500 watts. <sup>2</sup>Reduced to the greatest extent possible.

 $^{3}$ Field strength may not exceed 10  $\mu$ V/m at 1600 meters. Consumer equipment is not permitted the increase in field strength otherwise permitted here for over 500 watts.

<sup>4</sup>Induction cooking ranges manufactured prior to February 1, 1980, shall be subject to the field strength limits for miscellaneous ISM equipment.

Note 1: Limit 3m(dBµV/m)=Limit 300m(dBµV/m)+40Log(300m/3m) (Below 30MHz)

Note 2: Limit 3m(dBµV/m)=Limit 300m(dBµV/m)+20Log(300m/3m) (Above 30MHz)

Note 3: this product is a wireless charger which operated at 111-148kHz with data transmission. So, it belongs to miscellaneous with non-SIM frequency.

Level=Reading Level + Correction Factor

Correction Factor=Antenna Factor + Cable Loss

(The Reading Level is recorded by software which is not shown in the sheet)

### 9.3 Radiated Emission Test for 30MHz-1GHz

#### **Test Method**

1: The EUT was place on a turn table which is 0.8m above ground for below 1GHz at 3 meters chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.

2: The EUT was set 3 meters away from the interference – receiving antenna, which was mounted on the top of a variable – height antenna tower.

3: The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.

4: For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

5: Use the following spectrum analyzer settings According to C63.4:

Span = wide enough to capture the peak level of the in-band emission and all spurious

RBW = 100 KHz, VBW≥RBW for peak measurement, Sweep = auto, Detector function = peak, Trace = max hold.

Note:

1: The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 KHz for Quasi-peak detection (QP) at frequency below 1GHz.

#### Limits

According to §18.305, Field strength limit as below:

| Equipment   | Operating frequency                      | RF Power<br>generated by<br>equipment (watts) | Field strength limit<br>(µV/m)                    | Distance<br>(meters)      |
|---|--|---|---|---------------------------|
| Any type  | Any ISM frequency                        | Below 500                                     | 25  | 300                       |
| unless  |  | 500 or more                                   | 25 × SQRT(power/500)                              | <sup>1</sup> 300          |
| otherwise<br>specified<br>(miscellaneous)                 | Any non-ISM frequency                    | Below 500<br>500 or more                      | 15<br>15 × SQRT(power/500)                        | 300<br><sup>1</sup> 300   |
| Industrial<br>heaters and RF<br>stabilized arc<br>welders | On or below 5,725 MHz<br>Above 5,725 MHz | Any<br>Any                                    | 10<br>( <sup>2</sup> )                            | 1,600<br>( <sup>2</sup> ) |
| Medical diathermy   | Any ISM frequency                        | Any   | 25  | 300                       |
|   | Any non-ISM frequency                    | Any   | 15  | 300                       |
| Ultrasonic  | Below 490 kHz                            | Below 500<br>500 or more                      | 2,400/F(kHz)<br>2,400/F(kHz) ×<br>SQRT(power/500) | 300<br><sup>3</sup> 300   |
|   | 490 to 1,600 kHz                         | Any   | 24,000/F(kHz)                                     | 30                        |
|   | Above 1,600 kHz                          | Any   | 15  | 30                        |
| Induction   | Below 90 kHz                             | Any   | 1,500   | <sup>4</sup> 30           |
| cooking ranges  | On or above 90 kHz                       | Any   | 300   | <sup>4</sup> 30           |

<sup>1</sup>Field strength may not exceed 10  $\mu$ V/m at 1600 meters. Consumer equipment operating below 1000 MHz is not permitted the increase in field strength otherwise permitted here for power over 500 watts. <sup>2</sup>Reduced to the greatest extent possible.

<sup>3</sup>Field strength may not exceed 10  $\mu$ V/m at 1600 meters. Consumer equipment is not permitted the increase in field strength otherwise permitted here for over 500 watts.

<sup>4</sup>Induction cooking ranges manufactured prior to February 1, 1980, shall be subject to the field strength limits for miscellaneous ISM equipment.

Note 1: Limit  $3m(dB\mu V/m)$ =Limit  $300m(dB\mu V/m)$ +40Log(300m/3m) (Below 30MHz)

Note 2: Limit 3m(dBµV/m)=Limit 300m(dBµV/m)+20Log(300m/3m) (Above 30MHz)

Note 3: this product is a wireless charger which operated at 111-148kHz with data transmission. So, it belongs to miscellaneous with non-SIM frequency.

#### Remark:

- 1) Level=Reading Level + Correction Factor
- 2) Correction Factor=Antenna Factor + Cable Loss
- 3) The Reading Level is recorded by software which is not shown in the sheet
- 4) The worst case data were reported and no other spurious and harmonics emissions were reported greater than listed emission above table.

#### **Radiated Emission Test**

# **11. Measurement System Uncertainty**

For a 95% confidence level, the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 were:

| System Measurement Uncertainty   |  |  |  |
|--|--|--|--|
| Items  | Extended Uncertainty                     |  |  |
| Uncertainty for Radiated Emission in 3m chamber 30MHz-<br>1000MHz                      | Horizontal: 5.12dB;<br>Vertical: 5.10dB; |  |  |
| Uncertainty for Radiated Emission in 3m chamber 1000MHz-<br>18000MHz                   | Horizontal: 5.01dB;<br>Vertical: 5.00dB; |  |  |
| Uncertainty for Conducted Emission 150kHz-30MHz (for test using AMN ENV432 or ENV4200) | 3.21dB                                   |  |  |
