

# FCC RF Test Report

**Product Name: Smart Phone** 

**Model Number: MRD-LX1N** 

Report No.: SYBH(Z-RF)20181117006001-2001

FCC ID: QISMRD-LX1N

Reliability Laboratory of Huawei Technologies Co., Ltd.

(Global Compliance and Testing Center of Huawei Technologies Co., Ltd)

Administration Building, Headquarters of Huawei Technologies Co., Ltd., Bantian, Longgang District, Shenzhen, 518129, P.R.C

Tel: +86 755 28780808 Fax: +86 755 89652518

#### \* \* Notice \* \*

- 1. The Reliability Laboratory of Huawei Technologies Co., Ltd has passed the accreditation by The American Association for Laboratory Accreditation (A2LA). The accreditation number is 2174.01
- 2. The Laboratory of Sporton International (Shenzhen) Inc has passed the accreditation by National Voluntary Laboratory Accreditation Program (NVLAP). The NVLAP LAB CODE is 600156-0.
- 3. The Reliability Laboratory of Huawei Technologies Co., Ltd has been recognized by the US Federal Communications Commission (FCC) to perform compliance testing subject to the Commission's Certification rules. The Designation Number is CN1173, and the Test Firm Registration Number is 294140.
- 4. The Laboratory of Sporton International (Shenzhen) Inc has been recognized by the US Federal Communications Commission (FCC) to perform compliance testing subject to the Commission's Certification rules. The Designation Number is CN5019, and the Test Firm Registration Number is 577730.
- 5. The Reliability Laboratory of Huawei Technologies Co., Ltd has been listed by Industry Canada to perform electromagnetic emission measurements. The recognition numbers of test site are 6369A-1.
- 6. The Reliability Laboratory of Huawei Technologies Co., Ltd is also named "Global Compliance and Testing Center of Huawei Technologies Co., Ltd", the both names have coexisted since 2009.
- 7. The test report is invalid if not marked with the signatures of the persons responsible for preparing and approving the test report.
- 8. The test report is invalid if there is any evidence of erasure and/or falsification.
- 9. The test report is only valid for the test samples.
- 10. Content of the test report, in part or in full, cannot be used for publicity and/or promotional purposes without prior written approval from the laboratory.

Public

## **MODIFICATION RECORD**

| No. | Report No                  | Modification Description |
|-----|----------------------------|--------------------------|
| 1   | SYBH(Z-RF)20181117006001-2 | First release.           |
|     | 001                        |                          |

## **DECLARATION**

| Туре         | Description  |
|--------------|--|
| Multiple     |  |
| Models       | ☐ The present report applies to several models. The practical measurements are       |
| Applications | performed with the model.  |
|              | The present report only presents the worst test case of all modes, see relevant test |
|              | results for detailed.  |

## 2 **General Information**

## 2.1 Test standard/s

|                 | 47 CFR FCC Part 02   |  |  |
|-----------------|--|--|--|
| Applied Dules   | 47 CFR FCC Part 22   |  |  |
| Applied Rules : | 47 CFR FCC Part 24   |  |  |
|                 | 47 CFR FCC Part 27   |  |  |
| Took Makhadi.   | FCC KDB 971168 D01 Power Meas License Digital Systems v03r01 |  |  |
| Test Method :   | ANSI C63.26  |  |  |

#### 2.2 Test Environment

| Temperature :              | TN             | 15 to 30 | °C d | uring room temperature tests |
|----------------------------|----------------|----------|------|------------------------------|
| Ambient Relative Humidity: | 20 to          | 85 %     |      |                              |
| Atmospheric Pressure:      | Not applicable |          |      |                              |
|                            | VL             | 3.6      | V    |                              |
| Power supply :             | VN             | 3.82     | V    | DC by Battery                |
|                            | VH             | 4.4      | V    |                              |

NOTE 1: 1) VN= nominal voltage, VL= low extreme test voltage, VH= High extreme test voltage;

TN= normal temperature, TL= low extreme test temperature, TH= High extreme test temperature.

NOTE 2: The values used in the test report may be stringent than the declared.

# 2.3 Test Laboratories

| Test Location 1 :              | RELIABILITY LABORATORY OF HUAWEI TECHNOLOGIES CO.,                    |  |  |  |
|--------------------------------|---|--|--|--|
| Test Location 1.               | LTD.  |  |  |  |
| Address of Test Location 1 :   | No.2 New City Avenue Songshan Lake Sci. &Tech. Industry Park,         |  |  |  |
| Address of Test Location 1.    | Dongguan, Guangdong, P.R.C  |  |  |  |
| Sub-contracted Test Location   | Sporten International (Shanzhan) Inc                                  |  |  |  |
| 1:                             | Sporton International (Shenzhen) Inc.                                 |  |  |  |
| Address of Sub-contracted Test | No.3 Building, the third floor of south, Shahe River west, Fengzeyuan |  |  |  |
| Location 1:                    | warehouse, Nanshan District, Shenzhen, Guangdong, P.R.China           |  |  |  |

# 2.4 Applicant and Manufacturer

| Company Name : HUAWEI TECHNOLOGIES CO., LTD |   |  |  |
|---|---|--|--|
| Address                                     | Administration Building, Headquarters of Huawei Technologies Co., Ltd., |  |  |
| Address:                                    | Bantian, Longgang District, Shenzhen, 518129, P.R.C                     |  |  |

# 2.5 Application details

| Date of Receipt Sample: | 2018-12-04 |
|-------------------------|------------|
| Start of test:          | 2018-12-05 |
| End of test:            | 2018-12-24 |

# 3 Test Summary

## 3.1 Cellular Band (824-849 MHz paired with 869-894 MHz)

## 4 Description of the Equipment under Test (EUT)

## 4.1 General Description

MRD-LX1N is subscriber equipment in the GSM/WCDMA/LTE system. The GSM frequency bands include GSM850, GSM900, DCS1800 and PCS1900. The UMTS frequency band includes band I, band II, band V and band VIII. The LTE frequency bands include band 1, band 3, band 5, band 7, band8, band20. The Mobile Phone implements such functions as RF signal receiving/transmitting, LTE/HSPA/UMTS and GSM/GPRS/EDGE protocol processing, voice, video MMS service, GPS, AGPS and WIFI etc. Externally it provides one micro SD card interface, earphone port (to provide voice service), and dual SIM card interface. MRD-LX1N is dual SIM smart phone. It also provides Bluetooth module to synchronize data between a PC and the phone, or to use the built-in modem of the phone to access the Internet with a PC, or to exchange data with other Bluetooth devices.

The difference between model MRD-LX1 and MRD-LX1N is show in the below table.

|                    | Model              | MRD-LX1     | MRD-LX1N |
|--------------------|--------------------|-------------|----------|

Note1: Only GSM850 and GSM1900, UMTS B2 and B5, LTE B5 and B7 test data included in this report.

Note2: We do not test GSM, UMTS, LTE bands of MRD-LX1N, all test data can refer to SYBH(Z-RF)20181011024001 of MRD-LX1(FCC ID: QISMRD-LX1).

# 4.2 EUT Identity

NOTE:

Unless otherwise noted in the report, the functional boards installed in the units shall be selected from the below list, but not means all the functional boards listed below shall be installed in one unit.

#### 4.2.1Board

| Board       |                  |                           |  |  |
|-------------|------------------|---------------------------|--|--|
| Description | Hardware Version | Software Version          |  |  |
| Main Board  | HL1JATM          | 5.0.1.57 (SP1C900E64R1P3) |  |  |

## 4.2.2 Sub-Assembly

| Sub-Assembly Sub-Assembly |              |                               |  |  |  |  |
|---------------------------|--------------|-------------------------------|--|--|--|--|
| Sub-Assembly Name         | Model        | Manufacturer                  | Description  |  |  |  |
| Adapter                   | HW-050100U01 | Huawei Technologies Co., Ltd. | Input Voltage: 100V-240V  Output Voltage: 5V —— 1A                         |  |  |  |
| Li-ion Battery            | HB405979ECW  | Huawei Technologies Co., Ltd. | Rated capacity: 2920mAh  Nominal Voltage: +3.82V  Charging Voltage: +4.40V |  |  |  |

# 4.3 Technical Specification

NOTE: For the detailed technical descriptions, see the applicant/manufacturer's specifications or user manual.

| Characteristics        | Description               |                       |                                     |  |  |

## 5 General Test Conditions / Configurations

## 5.1 Test Modes

NOTE1: The test mode(s) are selected according to relevant radio technology specifications.

NOTE2: The modulation for WCDMA, HSUPA, HSDPA, DC-HSDPA is the same, which is QPSK, and the WCDMA is the worst, so we test the WCDMA only.

NOTE3: The power of HSPA+ system with 16QAM modulation is lower than that of QPSK, so we did not test 16QAM modulation.

| Test Mode | Test Modes Description                |
|-----------|---------------------------------------|
| GSM/TM1   | GSM system, GSM/GPRS, GMSK modulation |
| GSM/TM2   | GSM system, EDGE, 8PSK modulation     |
| UMTS/TM1  | WCDMA system, QPSK modulation         |
| LTE/TM1   | LTE system, QPSK modulation           |
| LTE/TM2   | LTE system, 16QAM modulation          |

# 5.2 Test Frequency

| Took Mode      | TX / RX |              | RF Channel   |              |
|----------------|---------|--------------|--------------|--------------|
| Test Mode      |         | Low (L)      | Middle (M)   | High (H)     |

#### 5.3 DESCRIPTION OF TESTS

## 5.3.1 Radiated Power and Radiated Spurious Emissions

Radiated spurious emissions are investigated indoors in a full-anechoic chamber to determine the frequencies producing the worst case emissions. Final measurements for radiated power and radiated spurious emissions are performed on the 3 meter OATS per the guidelines of ANSI/TIA-603-E-2016. The equipment under test was transmitting while connected to its integral antenna and is placed on a wooden turntable 150cm above the ground plane and 3 meters from the receive antenna. The spectrum is scanned from the lowest frequency generated in the equipment up to a frequency including its 10th harmonic. The receive antenna height is adjusted between 1 and 4 meter height, the turntable is rotated through 360 degrees, and the EUT is manipulated through all orthogonal planes representative of its typical use to achieve the highest reading on the receive spectrum analyzer. Emissions are also investigated with the receive antenna horizontally and vertically polarized.

A portable or small unlicensed wireless device shall be placed on a non-metallic test fixture or other non-metallic support during testing. The supporting fixture shall permit orientation of the EUT in each of three orthogonal (x, y, z) axis positions such that emissions from the EUT are maximized. Measure the EUT maximum RF power and record the result.

A half-wave dipole is then substituted in place of the EUT. For emissions above 3GHz, a horn antenna is substituted in place of the EUT. The substitute antenna is driven by a signal generator with the level of the signal generator being adjusted to obtain the same receive spectrum analyzer level previously recorded from the spurious emission from the EUT.

The power of the emission is calculated using the following formula:

Pd [dBm] = Pg [dBm] - cable loss [dB] + antenna gain [dBd/dBi]

Where, P<sub>d</sub> is the dipole equivalent power, P<sub>g</sub> is the generator output into the substitution antenna, and the antenna gain is the gain of the substitute antenna used relative to either a half-wave dipole (dBd) or an isotropic source (dBi). The substitute level is equal to Pg [dBm] – cable loss [dB].

The calculated Pd levels are then compared to the absolute spurious emission limit of -13dBm which is equivalent to the required minimum attenuation of 43 + 10log<sub>10</sub>(Power [Watts]).

KDB 971168 D01 v03-Section 5

ANSI/TIA-603-E-2016-Section 2.2.17 / ANSI/TIA-603-E-2016-Section 2.2.12

Note: Reference test setup 3

## 5.3.2 Peak-Average Ratio

A peak to average ratio measurement is performed at the conducted port of the EUT. The spectrum analyzers Complementary Cumulative Distribution Function (CCDF) measurement profile is used to determine the largest deviation between the average and the peak power of the EUT in a given bandwidth.

#### **Test Procedures Used**

KDB 971168 D01 v03-Section 5.7.2

## **Test Settings**

- 1. The signal analyzer's CCDF measurement profile enabled
- 2. Frequency= carrier center frequency
- 3. Measurement BW > EBW of signal
- 4, for continuous transmissions, set to 1ms
- 5. Record the maximum PAPR level associated with a probability of 0.1%.

Note: Reference test setup 1

## 5.3.3 Occupied Bandwidth

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured. The span of the analyzer shall be set to capture all products of the modulation process, including the emission skirts. The resolution bandwidth shall be set to as close to 1 percent of the selected span as is possible without being below 1 percent. The video bandwidth shall be set to 3 times the resolution bandwidth. Video averaging is not permitted. Where practical, a sampling detector shall be used since a peak or, peak hold, may produce a wider bandwidth than actual. The trace data points are recovered and are directly summed in linear terms. The recovered amplitude data points, beginning at the lowest frequency, are placed in a running sum until 0.5 percent of the total is reached and that frequency recorded. The process is repeated for the highest frequency data points. This frequency is recorded. The span between the two recorded frequencies is the occupied bandwidth.

## **Test Procedures Used**

KDB 971168 D01 v03-Section 4.3

#### **Test Settings**

- 1、SET RBW=1-5% of OBW
- 2、SET VBW ≥ 3\*RBW
- 3. Detector: Peak
- 4. Trace mode= max hold.
- 5. Sweep= auto couple
- 6. Steps 1-5 were repeated after it is stable

Note: Reference test setup 1.

Public

HIAWE

## 5.3.4 Band Edge Compliance

The test complies with the requirements in clause 2 of the present report according to test procedures in KDB 971168 D01 v03-Section 6 with corresponding test settings.

Note: Reference test setup 1.

## 5.3.5 Spurious and Harmonic Emissions at Antenna Terminal

The test complies with the requirements in clause 2 of the present report according to test procedures in KDB 971168 D01 v03-Section 6 with corresponding test settings.

Note: Reference test setup 1.

## 5.3.6 Frequency Stability / Temperature Variation

Frequency stability testing is performed in accordance with the guidelines of ANSI/TIA-603-E-2016. The frequency stability of the transmitter is measured by:

- a.) **Temperature:** The temperature is varied from -30°C to +50°C in 10°C increments using an environmental chamber.
- b.) **Primary Supply Voltage:** The primary supply voltage is varied from 85% to 115% of the nominal value for non hand-carried battery and AC powered equipment. For hand-carried, battery-powered equipment, primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacturer.

Specification – The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block. The frequency stability of the transmitter shall be maintained within ±0.00025% (±2.5 ppm) of the center frequency.

#### **Time Period and Procedure:**

- 1. The carrier frequency of the transmitter is measured at room temperature (20°C to provide a reference).
- 2. The equipment is turned on in a "standby" condition for fifteen minutes before applying power to the transmitter. Measurement of the carrier frequency of the transmitter is made within one minute after applying power to the transmitter.
- 3. Frequency measurements are made at 10°C intervals ranging from -30°C to +50°C. A period of at least one half-hour is provided to allow stabilization of the equipment at each temperature level.

#### **Test Procedures Used**

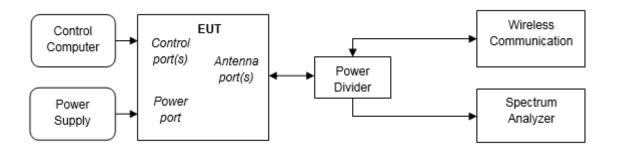

ANSI/TIA-603-E-2016

Note: Reference test setup 2.

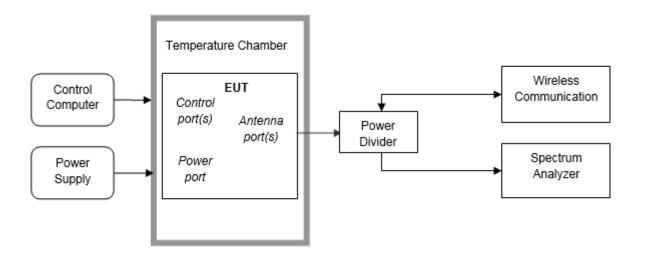

# 5.4 Test Setups

## 5.4.1 Test Setup 1

## 5.4.2 Test Setup 2

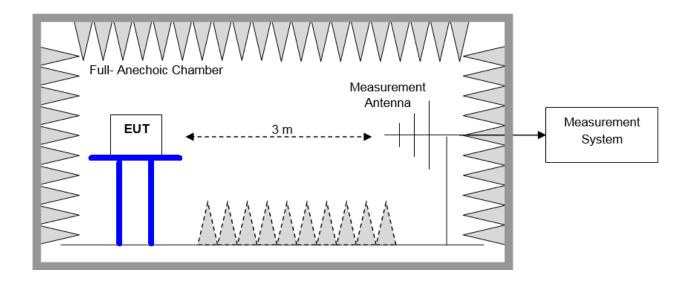

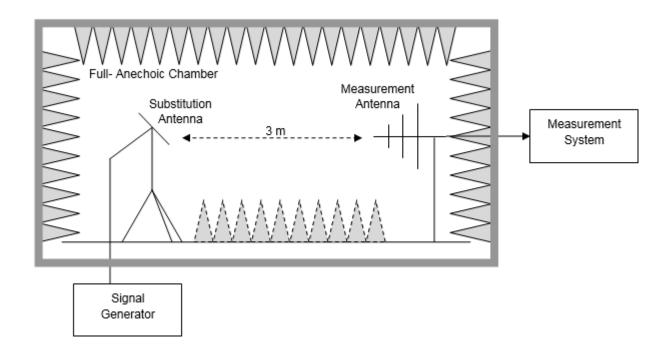

## 5.4.3 Test Setup 3

NOTE: Effective radiated power (ERP) and Equivalent Isotropic Radiated Power(EIRP) refers to the radiation power output of the EUT, assuming all emissions are radiated from half-wave dipole antennas.

## 5.4.3.1 Step 1: Pre-test

# 5.4.3.2 Step 2: Substitution method to verify the maximum ERP/EIRP

# 5.5 Test Conditions

| Test Case                    |                  | Test Conditions |  |  |

## 6 Main Test Instruments

## 6.1.1 Test Location 1:

This table gives a complete overview of the RF measurement equipment.

Devices used during the test described are marked ⊠

| Main        |                                      |              |        |                    |            |            |
|-------------|--------------------------------------|--------------|--------|--------------------|------------|------------|
| Marked      | Equipment Name                       | Manufacturer | Model  | Serial Number      | Cal Date   | Cal-Due    |

## 7 <u>Measurement Uncertainty</u>

For a 95% confidence level (k = 2), the measurement expanded uncertainties for defined systems, in accordance with the recommendations of ISO 17025 as following:

| Test Item                     | Extended Uncertainty    |                                |  |  |
|-------------------------------|-------------------------|--------------------------------|--|--|
| Transmit Output Power         | Power [dBm]             | U = 0.64 dB                    |  |  |
| Conducted                     |                         |                                |  |  |
| RF Power Density, Conducted   | Power [dBm]             | U = 0.64 dB                    |  |  |
| Bandwidth                     | Magnitude [kHz]         | 200kHz: U=9.06kHz              |  |  |
|                               |                         | 1.4MHz: U=9.48kHz              |  |  |
|                               |                         | 3MHz: U=10.86kHz               |  |  |
