Re: Limited Modular Approval for QJABTLE

We, Valentine Research, Inc., hereby requests Limited Modular Approval as described in CFR 47 Section 15.212. The section requirements have been fulfilled as follows:

15.212(a)(1)(i): The RF shielding requirements have not been met. The module meets the radiated emission limits of section 15.209 and 15.249 without shielding.

15.212(a)(1)(ii): Requirement of Buffered Input: The module provides buffered data input to the modulator.

15.212(a)(1)(iii): Requirement of Power Supply Regulation: The module incorporates its own regulator, which is denoted as U001 in the documentation.

15.212(a)(1)(iv): Antenna Requirement: The module incorporates an antenna permanently etched onto the printed circuit board.

15.212(a)(1)(v): The module was tested in a host configuration as described in the test report.

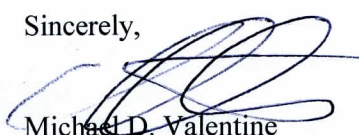

15.212(a)(1)(vi): The module will be labeled with its own FCC identification number, and the product into which the module is installed will have a permanent marking or label referring to the enclosed module. A picture of the external marking is included with the documentation.

15.212(a)(1)(vii): Operating Requirements: The module meets the specific rules for this type of transceiver. The module will only be used in Valentine Research, Inc. products.

15.212(a)(1)(viii): RF Exposure: The module complies with RF exposure requirements as demonstrated in the test report.

The module will only be installed in Valentine Research, Inc. end products and will not be sold to 3rd parties.

Sincerely,

Michael D. Valentine
President
