Hi, Chris.

The operational description and block diagram were in the same file.

BTW, even with 1s transmission interval with max 0.5ms pulse train, the total transmission duration in one hr is less than 2s ( 1.8s). Will this make the application to 15.231(a) applicable to this unit and make the application simple?

Regards,

Wei

Wei, thank you for forwarding the e-mail to me. I already had all those files from your upload to CCS. I still do not have the Operational Description. Please provide this Operational Description (technical Description) exhibit. Hopefully this will answer the questions I have.

Best regards,

Chris Harvey
