Re: QMNRM-307C\_ATCB004656

Dear Mr. Ward,

The following is our response to your correspondence dated March 21, 2007:

1) – 4) Please find the answers in the uploaded updated test report answered

5) This device has a limited number of supported modes; these modes can be seen in Appendix E of the SAR report. The mode with the highest time-averaged power has been used for both Head and Body SAR measurements. The mode used in the SAR measurements (RC3/S055) is given in the results tables in Section 7; this is consistent with the way we report GSM/GPRS/etc modes and we try to avoid repetition in our reports..

Please contact me if you have further questions.

Sincerely,

Andreas Gillmeier  
Product Certification Officer
