RE: FCC ID: QMNRM-61\_ATCB002397

Attention: Louis Le / Nerina Walton

I have a few comments on this Application. Please note that further comments may arise in response to answers provided to the questions below.

1. Please note that the report gives no information on how ERP measurements were performed. Please provide the test method you used to measure ERP for the device.
2. Please note that the lowest resolution bandwidth that should be used when measuring occupied bandwidth is 1% of the 26dB bandwidth. Please note that the AMPS bandwidths as listed on the 731 is 40kHz. This means that the lowest res bandwidth should be is 400Hz. If 400Hz is not an available res bandwidth on the analyzer, then the next higher resolution bandwidth should be used. Please explain why a lower than 1% resolution bandwidth was used.
