Hi Helen,

Here are the answers.

Question #1: From Theory of Operation. "When the passive infrared sensor detects motion in its field of view, the ASIC triggers the on-board transmitter that Transmits its specific ID followed by an alarm signal and battery condition," this transmitter is activated automatically. The test report also indicated transmission time: Period \leq 5 seconds. Please provide a test plot to show the device complies with FCC 15.231(a)(2) requirement: A transmitter activated automatically shall cease transmission within 5 seconds after activation
<answer>test plot is attached. I also saved it in F drive.

Question #2: Please confirm the receiver REC3 is certified or verified.
<answer>It is already certified. FCC ID : QNP-EVREC3.

Thanks,

Claire
