RF Exposure Requirements

DNB Report No: RV58074A

FCC ID: QOHSR20

RF Exposure – SAR Calculations (2402-2480 MHz Band)

Note: No SAR evaluation is required if the power is below the FCC threshold:

Tunable Range		Center of tunable	SAR Limitation
Freq (Low) GHz	Freq (High) GHz	range (GHz)	60/f (mW)
2.402	2.480	2.441	24.58

Maximum measured transmitter power						
Pout - Conducted (mW)	Pout - Conducted (dBm)	Maximum Antenna Gain (dBi)	Pout EIRP (mW)			
.096	-10.2	2.7	0.178			

Comparison to SAR requirements							
Maximum Tx power		SAR Limit	Delta	SAR evaluation required			
Conducted	0.096 mW	24.58mW	-24.484mW	No below threshold			
EIRP	0.178 mW	24.58mW	-24.402mW	No below threshold			

Conclusion: No SAR evaluation is required since the maximum Transmitter Pout (both conducted and EIRP) are below the FCC threshold.
