Re: Request for confidentiality

Applicant: BeamReach Networks Inc.

FCC ID: QONBRN5000

To whom it may concern,

Request is hereby submitted by BeamReach Networks to withhold from public review certain portions of the application for equipment certification for FCC identifier QONBRN5000. This request for confidentiality is made pursuant to 47 CFR 0.459 of the FCC Rules.

BeamReach Networks is a start-up company in the highly competitive, fixed broadband wireless market where product pricing is very dynamic and where our products incorporate new, state-of-the-art technologies as a competitive advantage. Disclosure of these technologies or pricing associated with these technologies could be damaging to our competitive position within this market.

Specific documents for which we request protection from public disclosure include:

- the RF block diagram providing RF, IF and baseband frequencies of operation,
- schematics detailing the circuits used in the products,
- bills of materials detailing the components used in assemblies of the products,
- the Digital Modulation description document which describes the digital modulation used in the products,
- the base tune-up procedure,
- specification control documents (SCDs) that include the specifications for custom components developed by BeamReach for the products,
- base station installation and commissioning manual.

If there are questions or issues regarding this request, I can be reached by phone at (508) 869-8707 or e-mail at ttokuno@beamreachnetworks.com.
