

# BGM220S Wireless Gecko Bluetooth Module Data Sheet

The BGM220S is a module designed and built to meet the performance, security, and reliability requirements of battery-powered IoT products running on Bluetooth networks.

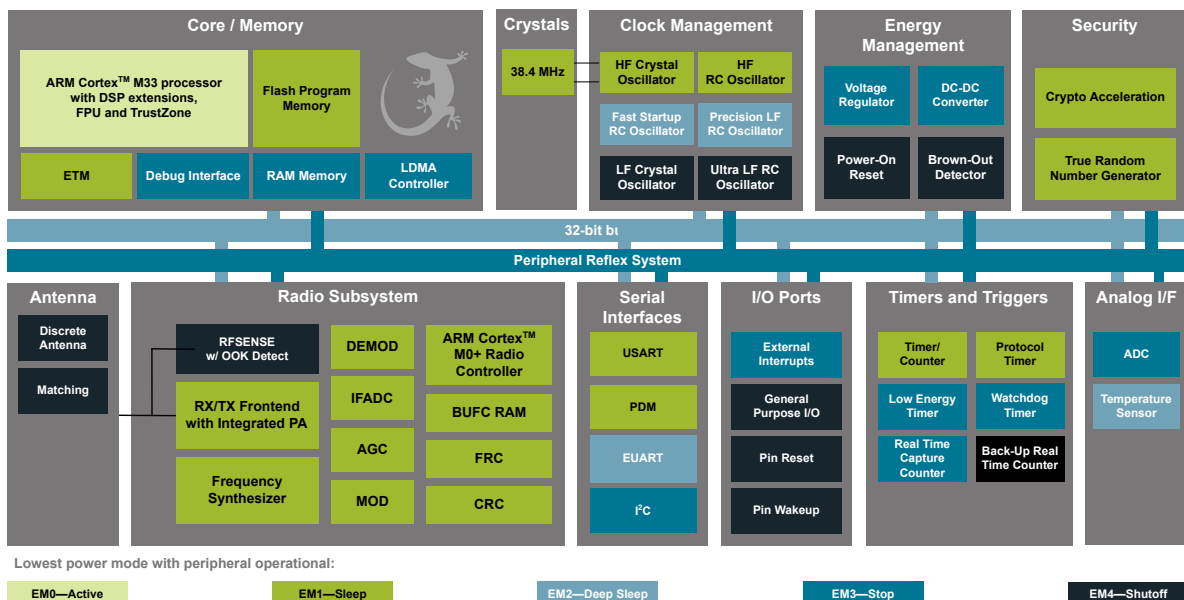

Based on the EFR32BG22 SoC, the BGM220S enables Bluetooth® Low Energy connectivity while delivering best-in-class RF range and performance, future-proof capability for feature and OTA firmware updates, enhanced security features, and low energy consumption.

BGM220S modules are a full solution that comes with fully-upgradeable, robust software stacks, world-wide regulatory certifications, advanced development and debugging tools, and support that will minimize and simplify the engineering and development of your end-products helping to accelerate their time-to-market.

The BGM220S is intended for a broad range of applications, including:

- Asset Tags and Beacons
- Portable Medical
- Sports, Fitness, and Wellness devices
- Connected Home
- Industrial and Building Automation
- Bluetooth mesh Low Power Nodes

KEY FEATURES
• Bluetooth 5.2
• Built-in antenna or RF pin
• Up to 0 dBm TX power
• -98.6 dBm BLE RX sensitivity at 1 Mbps
• 32-bit ARM Cortex-M33 core at up to 38.4 MHz
• 352/32 kB of Flash/RAM memory
• Optimal selection of MCU peripherals
• 25 GPIO pins
• 6 mm × 6 mm × 1.1 mm

## 1. Feature List

- **Supported Protocols**
  - Bluetooth Low Energy (Bluetooth 5.2)
- **Wireless System-on-Chip**
  - 2.4 GHz radio
  - TX power up to 0 dBm
  - High-performance 32-bit ARM Cortex-M33<sup>®</sup> with DSP instruction and floating-point unit for efficient signal processing
  - 352 kB flash program memory
  - 32 kB RAM data memory
  - Embedded Trace Macrocell (ETM) for advanced debugging
- **High Receiver Performance**
  - -98.6 dBm sensitivity (0.1% BER) at 1 Mbps GFSK
  - -95.8 dBm sensitivity (0.1% BER) at 2 Mbps GFSK
- **Low-Energy Consumption**
  - 4.0 mA RX current at 1 Mbps GFSK
  - 4.6 mA TX current at 0 dBm output power
  - 26  $\mu$ A/MHz in Active Mode (EM0)
  - 1.40  $\mu$ A EM2 DeepSleep current (RTCC running from LFXO, Full RAM retention)
- **Regulatory Certifications<sup>1</sup>**
  - FCC
  - CE
  - IC/ISED
  - MIC/TELEC
  - KCC
- **Wide Operating Range**
  - 1.8 to 3.8 V
  - -40 to +85 °C
- **Dimensions**
  - 6 mm × 6 mm × 1.1 mm
- **Security Features**
  - Secure Boot with Root of Trust and Secure Loader (RTSL)
  - Hardware Cryptographic Acceleration for AES128/256, SHA-1, SHA-2 (up to 256-bit), ECC (up to 256-bit), ECDSA, and ECDH
  - True Random Number Generator (TRNG) compliant with NIST SP800-90 and AIS-31
  - ARM<sup>®</sup> TrustZone<sup>®</sup>
  - Secure Debug with lock/unlock
- **Wide Selection of MCU Peripherals**
  - 12-bit 1 Msps SAR Analog to Digital Converter (ADC)
  - 25 General Purpose I/O pins with output state retention and asynchronous interrupts
  - 8 Channel DMA Controller
  - 12 Channel Peripheral Reflex System (PRS)
  - 4 × 16-bit Timer/Counter with 3 Compare/Capture/PWM channels
  - 1 × 32-bit Timer/Counter with 3 Compare/Capture/PWM channels
  - 32-bit Real Time Counter
  - 24-bit Low Energy Timer for waveform generation
  - 1 × Watchdog Timer
  - 2 × Universal Synchronous/Asynchronous Receiver/Transmitter (UART/SPI/SmartCard (ISO 7816)/IrDA/I<sup>2</sup>S)
  - 1 × Enhanced Universal Asynchronous Receiver/Transmitter (EUSART)
  - 2 × I<sup>2</sup>C interface with SMBus support
  - Digital microphone interface (PDM)
  - RFSense with selective OOK mode

1. Available at the BGM220S Full-Production release.

## 2. Ordering Information

**Table 2.1. Ordering Information**

Ordering Code	Protocol Stack	TX Power Rating	Antenna	RF Shield	Flash (kB)	RAM (kB)	GPIO	Temp Range
BGM220SC12WGA2	Bluetooth 5.2	0 dBm	Built-in	No	352	32	25	-40 to 85 °C

**Note:**

1. End-product manufacturers must verify that the module is configured to meet regulatory limits for each region in accordance with the formal certification test reports.
2. Devices are pre-programmed with BGAPI UART DFU bootloader.
3. Throughout this document, the devices in the table above may be referred to by their product family name (e.g. BGM220S), by model name (BGM220S12A), or by full ordering code.

### 3. System Overview

#### 3.1 Introduction

The BGM220S module combines an energy-friendly MCU with a highly integrated radio transceiver in a SiP module with a robust, integrated antenna. This section gives a short introduction to the features of the module.

The block diagram for the BGM220S module is shown in the figure below. The wireless module includes the EFR32BG22 wireless System on a Chip (SoC), required decoupling capacitors and inductors, 38.4 MHz crystal, RF matching circuit, and integrated antenna.

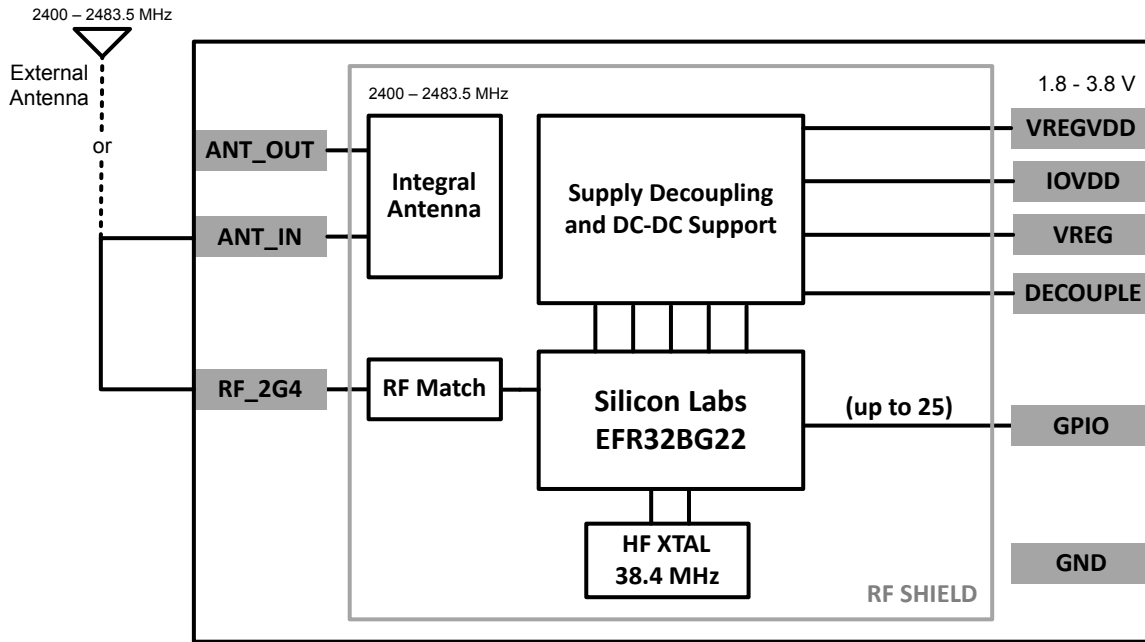

Figure 3.1. BGM220S Block Diagram

A simplified internal schematic for the BGM220S module is shown in the figure below.

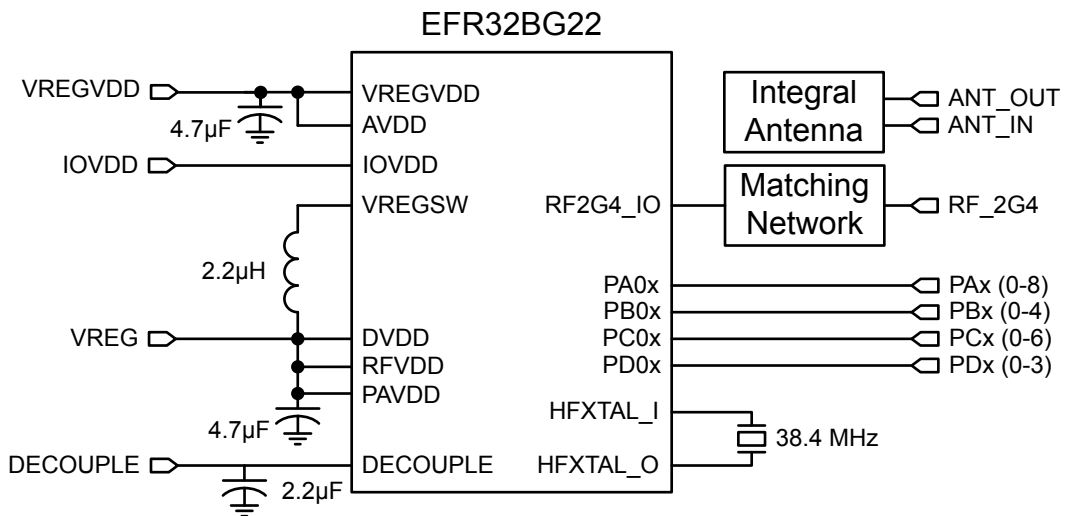

Figure 3.2. BGM220S Module Schematic

### 3.2 EFR32BG22 SoC

The EFR32BG22 SoC features a 32-bit ARM Cortex M33 core, a 2.4 GHz high-performance radio, 512 kB of flash memory, a rich set of MCU peripherals, and various clock management and serial interfacing options. Consult the [EFR32xG22 Wireless Gecko Reference Manual](#) and the [EFR32BG22 Data Sheet](#) for details.

### 3.3 Antenna

BGM220S modules include an integral antenna on board with the characteristics detailed in the table below.

**Table 3.1. Antenna Efficiency and Peak Gain**

Parameter	With optimal layout	Note
Efficiency	-1.3 to -2.6 dB	Antenna efficiency, gain and radiation pattern are highly dependent on the application PCB layout and mechanical design. Refer to <a href="#">7. Design Guidelines</a> for recommendations to achieve optimal antenna performance.
Peak gain	1.5 dBi	

### 3.4 Power Supply

The BGM220S requires a single nominal supply level of 3.0 V to operate. All necessary decoupling and filtering components are included in the module.

## 4. Electrical Characteristics

All electrical parameters in all tables are specified under the following conditions, unless stated otherwise:

- Typical values are based on  $T_A=25\text{ }^\circ\text{C}$  and VREGVDD supply at 3.0 V, by production test and/or technology characterization.
- Minimum and maximum values represent the worst conditions across supply voltage, process variation, and operating temperature, unless stated otherwise.

### 4.1 Absolute Maximum Ratings

Stresses beyond those listed below may cause permanent damage to the device. This is a stress rating only and functional operation of the devices at those or any other conditions beyond those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability. For more information on the available quality and reliability data, see the Quality and Reliability Monitor Report at <http://www.silabs.com/support/quality/pages/default.aspx>.

**Table 4.1. Absolute Maximum Ratings**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Storage temperature range	$T_{STG}$		-50	—	+150	$^\circ\text{C}$
Voltage on any supply pin	$V_{DDMAX}$		-0.3	—	3.8	V
Junction temperature	$T_{JMAX}$	-G grade	—	—	+105	$^\circ\text{C}$
Voltage ramp rate on any supply pin	$V_{DDRAMPMAX}$		—	—	1.0	V / $\mu\text{s}$
DC voltage on any GPIO pin	$V_{DIGPIN}$		-0.3	—	$V_{IOVDD} + 0.3$	V
Absolute voltage on RF pin RF_2G4	$V_{MAX2G4}$		-0.3	—	$V_{VREG} + 0.3$	V
Total current into VDD power lines	$I_{VDDMAX}$	Source	—	—	200	mA
Total current into VSS ground lines	$I_{VSSMAX}$	Sink	—	—	200	mA
Current per I/O pin	$I_{IOMAX}$	Sink	—	—	50	mA
		Source	—	—	50	mA
Current for all I/O pins	$I_{IOALLMAX}$	Sink	—	—	200	mA
		Source	—	—	200	mA

## 4.2 General Operating Conditions

This table specifies the general operating temperature range and supply voltage range for all supplies. The minimum and maximum values of all other tables are specified over this operating range, unless otherwise noted.

**Table 4.2. General Operating Conditions**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Operating ambient temperature range	$T_A$	-G temperature grade	-40	—	+85	°C
IOVDDx operating supply voltage (All IOVDD pins)	$V_{IOVDDx}$		1.71	3.0	3.8	V
VREGVDD operating supply voltage	$V_{VREGVDD}$	DCDC in regulation <sup>1</sup>	2.2	3.0	3.8	V
		DCDC in bypass	1.8	3.0	3.8	V
HCLK and SYSCLK frequency	$f_{HCLK}$	VSCALE2, MODE = WS1	—	—	76.8	MHz
		VSCALE2, MODE = WS0	—	—	40	MHz
		VSCALE1, MODE = WS0	—	—	40	MHz
PCLK frequency	$f_{PCLK}$	VSCALE2	—	—	50	MHz
		VSCALE1	—	—	40	MHz
EM01 Group A clock frequency	$f_{EM01GRPACLK}$	VSCALE2	—	—	76.8	MHz
		VSCALE1	—	—	40	MHz
EM01 Group B clock frequency	$f_{EM01GRPBCLK}$	VSCALE2	—	—	76.8	MHz
		VSCALE1	—	—	40	MHz
Radio HCLK frequency <sup>2</sup>	$f_{RHCLK}$	VSCALE2 or VSCALE1	—	38.4	—	MHz

**Note:**

- The supported maximum  $V_{VREGVDD}$  in regulation mode is a function of temperature and 10-year lifetime average load current. See more details in [4.2.1 DC-DC Operating Limits](#).
- The recommended radio crystal frequency is 38.4 MHz. Any crystal frequency other than 38.4 is expressly not supported.

### 4.2.1 DC-DC Operating Limits

The maximum supported voltage on the VREGVDD supply pin is limited under certain conditions. Maximum input voltage is a function of temperature and the average load current over a 10-year lifetime. [Figure 4.1 Lifetime average load current limit vs. Maximum input voltage on page 10](#) shows the safe operating region under specific conditions. Exceeding this safe operating range may impact the reliability and performance of the DC-DC converter.

The average load current for an application can typically be determined by examining the current profile during the time the device is powered. For example, an application that is continuously powered which spends 99% of the time asleep consuming 2  $\mu\text{A}$  and 1% of the time active and consuming 10 mA has an average lifetime load current of about 102  $\mu\text{A}$ .

**Figure 4.1. Lifetime average load current limit vs. Maximum input voltage**

The minimum input voltage for the DC-DC in EM0/EM1 mode is a function of the maximum load current, and the peak current setting. [Figure 4.2 Transient maximum load current vs. Minimum input voltage on page 10](#) shows the max load current vs. input voltage for different DC-DC peak inductor current settings.

**Figure 4.2. Transient maximum load current vs. Minimum input voltage**

### 4.3 MCU Current Consumption with 3 V Supply

Unless otherwise indicated, typical conditions are: Module supply voltage = 3.0 V. Voltage scaling level = VSCALE1.  $T_A = 25\text{ }^\circ\text{C}$ . Minimum and maximum values in this table represent the worst conditions across process variation at  $T_A = 25\text{ }^\circ\text{C}$ .

**Table 4.3. MCU Current Consumption with 3 V Supply**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Current consumption in EM0 mode with all peripherals disabled	$I_{ACTIVE}$	76.8 MHz HFRCO w/ DPLL referenced to 38.4 MHz crystal, CPU running while loop from flash, VSCALE2	—	27	—	$\mu\text{A}/\text{MHz}$
		76.8 MHz HFRCO w/ DPLL referenced to 38.4 MHz crystal, CPU running CoreMark loop from flash, VSCALE2	—	37	—	$\mu\text{A}/\text{MHz}$
		38.4 MHz crystal, CPU running Prime from flash	—	28	—	$\mu\text{A}/\text{MHz}$
		38.4 MHz crystal, CPU running while loop from flash	—	26	—	$\mu\text{A}/\text{MHz}$
		38.4 MHz crystal, CPU running CoreMark loop from flash	—	38	—	$\mu\text{A}/\text{MHz}$
		38 MHz HFRCO, CPU running while loop from flash	—	22	—	$\mu\text{A}/\text{MHz}$
		76.8 MHz HFRCO w/ DPLL referenced to 38.4 MHz crystal, CPU running Prime from flash, VSCALE2	—	28	—	$\mu\text{A}/\text{MHz}$
Current consumption in EM1 mode with all peripherals disabled	$I_{EM1}$	76.8 MHz HFRCO w/ DPLL referenced to 38.4 MHz crystal, VSCALE2	—	17	—	$\mu\text{A}/\text{MHz}$
		38.4 MHz crystal	—	17	—	$\mu\text{A}/\text{MHz}$
		38 MHz HFRCO	—	13	—	$\mu\text{A}/\text{MHz}$
Current consumption in EM2 mode, VSCALE0	$I_{EM2\_VS}$	Full RAM retention and RTC running from LFXO	—	1.40	—	$\mu\text{A}$
		Full RAM retention and RTC running from LFRCO	—	1.40	—	$\mu\text{A}$
		Full RAM retention and RTC running from LFRCO in precision mode	—	1.75	—	$\mu\text{A}$
		24 kB RAM retention and RTC running from LFXO	—	1.32	—	$\mu\text{A}$
		24 kB RAM retention and RTC running from LFRCO in precision mode	—	1.66	—	$\mu\text{A}$
		8 kB RAM retention and RTC running from LFXO	—	1.21	—	$\mu\text{A}$
		8 kB RAM retention and RTC running from LFRCO	—	1.20	—	$\mu\text{A}$
Current consumption in EM3 mode, VSCALE0	$I_{EM3\_VS}$	8 kB RAM retention and RTC running from ULFRCO	—	1.05	—	$\mu\text{A}$

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Current consumption in EM4 mode	$I_{EM4}$	No BURTC, No LF Oscillator, DCDC bypassed	—	0.17	—	$\mu\text{A}$
Additional current in EM2 or EM3 when any peripheral in PD0B is enabled <sup>1</sup>	$I_{PD0B\_VS}$		—	0.37	—	$\mu\text{A}$

**Note:**

1. Extra current consumed by power domain. Does not include current associated with the enabled peripherals. See for a list of the peripherals in each power domain.

#### 4.4 Radio Current Consumption with 3 V Supply

RF current consumption measured with MCU in EM1, HCLK = 38.4 MHz, and all MCU peripherals disabled. Unless otherwise indicated, typical conditions are: VREGVDD = 3.0 V.  $T_A = 25\text{ }^\circ\text{C}$ . Minimum and maximum values in this table represent the worst conditions across process variation at  $T_A = 25\text{ }^\circ\text{C}$ .

**Table 4.4. Radio Current Consumption with 3 V Supply**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
System current consumption in receive mode, active packet reception	$I_{RX\_ACTIVE}$	125 kbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.3	—	mA
		500 kbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.3	—	mA
		1 Mbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.0	—	mA
		2 Mbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.5	—	mA
System current consumption in receive mode, listening for packet	$I_{RX\_LISTEN}$	125 kbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.2	—	mA
		500 kbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.3	—	mA
		1 Mbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.1	—	mA
		2 Mbit/s, 2GFSK, $f = 2.4\text{ GHz}$ , Bluetooth stack running	—	4.6	—	mA
System current consumption in transmit mode	$I_{TX}$	$f = 2.4\text{ GHz}$ , CW, 0 dBm output power	—	4.6	—	mA

#### 4.5 RF Transmitter General Characteristics for the 2.4 GHz Band

Unless otherwise indicated, typical conditions are:  $T_A = 25\text{ }^\circ\text{C}$ ,  $V_{REGVDD} = 3.0\text{V}$ . RF center frequency 2.45 GHz.

**Table 4.5. RF Transmitter General Characteristics for the 2.4 GHz Band**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
RF tuning frequency range	$F_{RANGE}$		2400	—	2483.5	MHz
Maximum TX power <sup>1</sup>	$POUT_{MAX}$	0 dBm output power	—	-0.5	—	dBm
Minimum active TX Power	$POUT_{MIN}$	0 dBm output power	—	-28	—	dBm
Output power variation vs VREGVDD supply voltage variation, frequency = 2450 MHz	$POUT_{VAR_V}$	0 dBm output power, with VREGVDD voltage swept from 1.8 to 3.0 V	—	0.04	—	dB
Output power variation vs temperature, Frequency = 2450 MHz	$POUT_{VAR_T}$	0 dBm output power, (-40 to +85 °C)	—	1.0	—	dB
Output power variation vs RF frequency	$POUT_{VAR_F}$	0 dBm output power	—	0.15	—	dB
<b>Note:</b> 1. Supported transmit power levels are determined by the ordering part number (OPN). Transmit power ratings for all devices covered in this data sheet can be found in the Max TX Power column of the Ordering Information Table.						

#### 4.6 RF Receiver General Characteristics for the 2.4 GHz Band

Unless otherwise indicated, typical conditions are:  $T_A = 25\text{ }^\circ\text{C}$ ,  $V_{REGVDD} = 3.0\text{V}$ . RF center frequency 2.45 GHz.

**Table 4.6. RF Receiver General Characteristics for the 2.4 GHz Band**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
RF tuning frequency range	$F_{RANGE}$		2400	—	2483.5	MHz

**4.7 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 1 Mbps Data Rate**

Unless otherwise indicated, typical conditions are:  $T_A = 25\text{ }^\circ\text{C}$ ,  $V_{REGVDD} = 3.0\text{V}$ . RF center frequency 2.45 GHz.

**Table 4.7. RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 1 Mbps Data Rate**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Max usable receiver input level	SAT	Signal is reference signal <sup>1</sup>	—	10	—	dBm
Sensitivity	SENS	Signal is reference signal, 37 byte payload <sup>2</sup>	—	-98.6	—	dBm
		Signal is reference signal, 255 byte payload <sup>1</sup>	—	-97.1	—	dBm
		With non-ideal signals <sup>3 1</sup>	—	-96.5	—	dBm
Signal to co-channel interferer	$C/I_{CC}$	(see notes) <sup>1 4</sup>	—	8.7	—	dB
$N \pm 1$ Adjacent channel selectivity	$C/I_1$	Interferer is reference signal at +1 MHz offset <sup>1 5 4 6</sup>	—	-6.6	—	dB
		Interferer is reference signal at -1 MHz offset <sup>1 5 4 6</sup>	—	-6.5	—	dB

		Interferer is reference signal at -2 MHz offset <sup>1 5 4 6</sup>	—	-39.9	—	dB
$N \pm 3$ Alternate channel selectivity	$C/I_3$	Interferer is reference signal at +3 MHz offset <sup>1 5 4 6</sup>	—	-45.9	—	dB
		Interferer is reference signal at -3 MHz offset <sup>1 5 4 6</sup>	—	-46.2	—	dB
Selectivity to image frequency	$C/I_{IM}$	Interferer is reference signal at image frequency with 1 MHz precision <sup>1 6</sup>	—	-23.5	—	dB
Selectivity to image frequency $\pm 1$ MHz	$C/I_{IM\_1}$	Interferer is reference signal at image frequency +1 MHz with 1 MHz precision <sup>1 6</sup>	—	-40.9	—	dB
		Interferer is reference signal at image frequency -1 MHz with 1 MHz precision <sup>1 6</sup>	—	-6.6	—	dB
Intermodulation performance	IM	$n = 3$ (see note <sup>7</sup> )	—	-17.1	—	dBm

**Note:**

- 0.017% Bit Error Rate.
- 0.1% Bit Error Rate.
- With non-ideal signals as specified in Bluetooth Test Specification RF-PHY.TS.5.0.1 section 4.7.1
- Desired signal -67 dBm.
- Desired frequency  $2402\text{ MHz} \leq F_c \leq 2480\text{ MHz}$ .
- With allowed exceptions.
- As specified in Bluetooth Core specification version 5.1, Vol 6, Part A, Section 4.4

**4.8 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 2 Mbps Data Rate**

Unless otherwise indicated, typical conditions are:  $T_A = 25\text{ }^\circ\text{C}$ ,  $V_{REGVDD} = 3.0\text{V}$ . RF center frequency 2.45 GHz.

**Table 4.8. RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 2 Mbps Data Rate**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Max usable receiver input level	SAT	Signal is reference signal <sup>1</sup>	—	10	—	dBm
Sensitivity	SENS	Signal is reference signal, 37 byte payload <sup>2</sup>	—	-95.8	—	dBm
		Signal is reference signal, 255 byte payload <sup>1</sup>	—	-94.3	—	dBm
		With non-ideal signals <sup>3 1</sup>	—	-93.9	—	dBm
Signal to co-channel interferer	$C/I_{CC}$	(see notes) <sup>1 4</sup>	—	8.8	—	dB
$N \pm 1$ Adjacent channel selectivity	$C/I_1$	Interferer is reference signal at +2 MHz offset <sup>1 5 4 6</sup>	—	-9.2	—	dB
		Interferer is reference signal at -2 MHz offset <sup>1 5 4 6</sup>	—	-6.6	—	dB
$N \pm 2$ Alternate channel selectivity	$C/I_2$	Interferer is reference signal at +4 MHz offset <sup>1 5 4 6</sup>	—	-43.3	—	dB
		Interferer is reference signal at -4 MHz offset <sup>1 5 4 6</sup>	—	-44.0	—	dB
$N \pm 3$ Alternate channel selectivity	$C/I_3$	Interferer is reference signal at +6 MHz offset <sup>1 5 4 6</sup>	—	-48.6	—	dB
		Interferer is reference signal at -6 MHz offset <sup>1 5 4 6</sup>	—	-50.7	—	dB
Selectivity to image frequency	$C/I_{IM}$	Interferer is reference signal at image frequency with 1 MHz precision <sup>1 6</sup>	—	-23.8	—	dB
Selectivity to image frequency $\pm 2$ MHz	$C/I_{IM\_1}$	Interferer is reference signal at image frequency +2 MHz with 1 MHz precision <sup>1 6</sup>	—	-43.3	—	dB
		Interferer is reference signal at image frequency -2 MHz with 1 MHz precision <sup>1 6</sup>	—	-9.2	—	dB
Intermodulation performance	IM	$n = 3$ (see note <sup>7</sup> )	—	-18.8	—	dBm

**Note:**

- 0.017% Bit Error Rate.
- 0.1% Bit Error Rate.
- With non-ideal signals as specified in Bluetooth Test Specification RF-PHY.TS.5.0.1 section 4.7.1
- Desired signal -64 dBm.
- Desired frequency  $2402\text{ MHz} \leq F_c \leq 2480\text{ MHz}$ .
- With allowed exceptions.
- As specified in Bluetooth Core specification version 5.1, Vol 6, Part A, Section 4.4

**4.9 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 500 kbps Data Rate**

Unless otherwise indicated, typical conditions are:  $T_A = 25\text{ }^\circ\text{C}$ ,  $V_{REGVDD} = 3.0\text{V}$ . RF center frequency 2.45 GHz.

**Table 4.9. RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 500 kbps Data Rate**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Max usable receiver input level	SAT	Signal is reference signal <sup>1</sup>	—	10	—	dBm
Sensitivity	SENS	Signal is reference signal, 37 byte payload <sup>2</sup>	—	-102.1	—	dBm
		Signal is reference signal, 255 byte payload <sup>1</sup>	—	-100.8	—	dBm
		With non-ideal signals <sup>3 1</sup>	—	-99.8	—	dBm
Signal to co-channel interferer	$C/I_{CC}$	(see notes) <sup>1 4</sup>	—	2.7	—	dB
$N \pm 1$ Adjacent channel selectivity	$C/I_1$	Interferer is reference signal at +1 MHz offset <sup>1 5 4 6</sup>	—	-8.0	—	dB
		Interferer is reference signal at -1 MHz offset <sup>1 5 4 6</sup>	—	-7.9	—	dB
$N \pm 2$ Alternate channel selectivity	$C/I_2$	Interferer is reference signal at +2 MHz offset <sup>1 5 4 6</sup>	—	-46.5	—	dB
		Interferer is reference signal at -2 MHz offset <sup>1 5 4 6</sup>	—	-49.9	—	dB
$N \pm 3$ Alternate channel selectivity	$C/I_3$	Interferer is reference signal at +3 MHz offset <sup>1 5 4 6</sup>	—	-48.9	—	dB
		Interferer is reference signal at -3 MHz offset <sup>1 5 4 6</sup>	—	-53.8	—	dB
Selectivity to image frequency	$C/I_{IM}$	Interferer is reference signal at image frequency with 1 MHz precision <sup>1 6</sup>	—	-48.3	—	dB
Selectivity to image frequency $\pm 1$ MHz	$C/I_{IM\_1}$	Interferer is reference signal at image frequency +1 MHz with 1 MHz precision <sup>1 6</sup>	—	-49.9	—	dB
		Interferer is reference signal at image frequency -1 MHz with 1 MHz precision <sup>1 6</sup>	—	-46.5	—	dB

**Note:**

- 0.017% Bit Error Rate.
- 0.1% Bit Error Rate.
- With non-ideal signals as specified in Bluetooth Test Specification RF-PHY.TS.5.0.1 section 4.7.1
- Desired signal -72 dBm.
- Desired frequency  $2402\text{ MHz} \leq F_c \leq 2480\text{ MHz}$ .
- With allowed exceptions.

**4.10 RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 125 kbps Data Rate**

Unless otherwise indicated, typical conditions are:  $T_A = 25\text{ }^\circ\text{C}$ ,  $V_{REGVDD} = 3.0\text{V}$ . RF center frequency 2.45 GHz.

**Table 4.10. RF Receiver Characteristics for Bluetooth Low Energy in the 2.4 GHz Band 125 kbps Data Rate**

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Max usable receiver input level	SAT	Signal is reference signal <sup>1</sup>	—	10	—	dBm
Sensitivity	SENS	Signal is reference signal, 37 byte payload <sup>2</sup>	—	-106.3	—	dBm
		Signal is reference signal, 255 byte payload <sup>1</sup>	—	-105.9	—	dBm
		With non-ideal signals <sup>3 1</sup>	—	-105.5	—	dBm
Signal to co-channel interferer	$C/I_{CC}$	(see notes) <sup>1 4</sup>	—	0.9	—	dB
$N \pm 1$ Adjacent channel selectivity	$C/I_1$	Interferer is reference signal at +1 MHz offset <sup>1 5 4 6</sup>	—	-13.6	—	dB
		Interferer is reference signal at -1 MHz offset <sup>1 5 4 6</sup>	—	-13.4	—	dB
$N \pm 2$ Alternate channel selectivity	$C/I_2$	Interferer is reference signal at +2 MHz offset <sup>1 5 4 6</sup>	—	-52.6	—	dB
		Interferer is reference signal at -2 MHz offset <sup>1 5 4 6</sup>	—	-55.8	—	dB
$N \pm 3$ Alternate channel selectivity	$C/I_3$	Interferer is reference signal at +3 MHz offset <sup>1 5 4 6</sup>	—	-53.7	—	dB
		Interferer is reference signal at -3 MHz offset <sup>1 5 4 6</sup>	—	-59.0	—	dB
Selectivity to image frequency	$C/I_{IM}$	Interferer is reference signal at image frequency with 1 MHz precision <sup>1 6</sup>	—	-52.7	—	dB
Selectivity to image frequency $\pm 1$ MHz	$C/I_{IM\_1}$	Interferer is reference signal at image frequency +1 MHz with 1 MHz precision <sup>1 6</sup>	—	-53.7	—	dB
		Interferer is reference signal at image frequency -1 MHz with 1 MHz precision <sup>1 6</sup>	—	-52.6	—	dB

**Note:**

- 0.017% Bit Error Rate.
- 0.1% Bit Error Rate.
- With non-ideal signals as specified in Bluetooth Test Specification RF-PHY.TS.5.0.1 section 4.7.1
- Desired signal -79 dBm.
- Desired frequency  $2402\text{ MHz} \leq F_c \leq 2480\text{ MHz}$ .
- With allowed exceptions.

## 4.11 High-Frequency Crystal

Table 4.11. High-Frequency Crystal

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Crystal frequency	$f_{\text{HFXTAL}}$		—	38.4	—	MHz
Initial calibrated accuracy	$\text{ACC}_{\text{HFXTAL}}$		-10	+/-5	10	ppm
Temperature drift	$\text{DRIFT}_{\text{HFXTAL}}$	Across specified temperature range	-20	—	20	ppm

## 4.12 Low Frequency Crystal Oscillator

Table 4.12. Low Frequency Crystal Oscillator

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Crystal Frequency	$F_{\text{LFXO}}$		—	32.768	—	kHz
Supported Crystal equivalent series resistance (ESR)	$\text{ESR}_{\text{LFXO}}$	GAIN = 0	—	—	80	k $\Omega$
		GAIN = 1 to 3	—	—	100	k $\Omega$
Supported range of crystal load capacitance <sup>1</sup>	$C_{\text{LFXO\_CL}}$	GAIN = 0	4	—	6	pF
		GAIN = 1	6	—	10	pF
		GAIN = 2	10	—	12.5	pF
		GAIN = 3 (see note <sup>2</sup> )	12.5	—	18	pF
Current consumption	$I_{\text{CL12p5}}$	ESR = 70 k $\Omega$ , CL = 12.5 pF, GAIN <sup>3</sup> = 2, AGC <sup>4</sup> = 1	—	357	—	nA
Startup Time	$T_{\text{STARTUP}}$	ESR = 70 k $\Omega$ , CL = 7 pF, GAIN <sup>3</sup> = 1, AGC <sup>4</sup> = 1	—	63	—	ms
On-chip tuning cap step size	$\text{SS}_{\text{LFXO}}$		—	0.26	—	pF
On-chip tuning capacitor value at minimum setting <sup>5</sup>	$C_{\text{LFXO\_MIN}}$	CAPTUNE = 0	—	4	—	pF
On-chip tuning capacitor value at maximum setting <sup>5</sup>	$C_{\text{LFXO\_MAX}}$	CAPTUNE = 0x4F	—	24.5	—	pF

**Note:**

- Total load capacitance seen by the crystal
- Crystals with a load capacitance of greater than 12 pF require external load capacitors.
- In LFXO\_CAL Register
- In LFXO\_CFG Register
- The effective load capacitance seen by the crystal will be  $C_{\text{LFXO}}/2$ . This is because each XTAL pin has a tuning cap and the two caps will be seen in series by the crystal

## 4.13 Precision Low Frequency RC Oscillator (LFRCO)

Table 4.13. Precision Low Frequency RC Oscillator (LFRCO)

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Nominal oscillation frequency	$F_{LFRCO}$		—	32.768	—	kHz
Frequency accuracy	$F_{LFRCO\_ACC}$	Normal mode	-3	—	3	%
		Precision mode <sup>1</sup> , across operating temperature range <sup>2</sup>	-500	—	500	ppm
Startup time	$t_{STARTUP}$	Normal mode	—	204	—	$\mu$ s
		Precision mode <sup>1</sup>	—	11.7	—	ms
Current consumption	$I_{LFRCO}$	Normal mode	—	175	—	nA
		Precision mode <sup>1</sup> , T = stable at 25 °C <sup>3</sup>	—	655	—	nA

**Note:**

1. The LFRCO operates in high-precision mode when CFG\_HIGHPRECEN is set to 1. High-precision mode is not available in EM4.
2. Includes  $\pm 40$  ppm frequency tolerance of the HFXO crystal.
3. Includes periodic re-calibration against HFXO crystal oscillator.

## 4.14 GPIO Pins

Unless otherwise indicated, typical conditions are: IOVDD = 3.0 V.

Table 4.14. GPIO Pins

Parameter	Symbol	Test Condition	Min	Typ	Max	Unit
Leakage current	I <sub>LEAK_IO</sub>	MODEx = DISABLED, IOVDD = 1.71 V	—	1.9	—	nA
		MODEx = DISABLED, IOVDD = 3.0 V	—	2.5	—	nA
Input low voltage <sup>1</sup>	V <sub>IL</sub>	Any GPIO pin	—	—	0.3*IOVDD	V
		RESETn	—	—	0.3*DVDD	V
Input high voltage <sup>1</sup>	V <sub>IH</sub>	Any GPIO pin	0.7*IOVDD	—	—	V
		RESETn	0.7*DVDD	—	—	V
Hysteresis of input voltage	V <sub>HYS</sub>	Any GPIO pin	0.05*IOVDD	—	—	V
		RESETn	0.05*DVDD	—	—	V
Output high voltage	V <sub>OH</sub>	Sourcing 20mA, IOVDD = 3.0 V	0.8 * IOVDD	—	—	V
		Sourcing 8mA, IOVDD = 1.71 V	0.6 * IOVDD	—	—	V
Output low voltage	V <sub>OL</sub>	Sinking 20mA, IOVDD = 3.0 V	—	—	0.2 * IOVDD	V
		Sinking 8mA, IOVDD = 1.71 V	—	—	0.4 * IOVDD	V
GPIO rise time	T <sub>GPIO_RISE</sub>	IOVDD = 3.0 V, C <sub>load</sub> = 50pF, SLEWRATE = 4, 10% to 90%	—	8.4	—	ns
		IOVDD = 1.71 V, C <sub>load</sub> = 50pF, SLEWRATE = 4, 10% to 90%	—	13	—	ns
GPIO fall time	T <sub>GPIO_FALL</sub>	IOVDD = 3.0 V, C <sub>load</sub> = 50pF, SLEWRATE = 4, 90% to 10%	—	7.1	—	ns
		IOVDD = 1.71 V, C <sub>load</sub> = 50pF, SLEWRATE = 4, 90% to 10%	—	11.9	—	ns
Pull up/down resistance <sup>2</sup>	R <sub>PULL</sub>	Any GPIO pin. Pull-up to IOVDD: MODEn = DISABLE DOUT=1. Pull-down to VSS: MODEn = WIREORPULLDOWN DOUT = 0.	35	44	55	kΩ
		RESETn pin. Pull-up to DVDD	35	44	55	kΩ
Maximum filtered glitch width	T <sub>GF</sub>	MODE = INPUT, DOUT = 1	—	27	—	ns

**Note:**

- GPIO input thresholds are proportional to the IOVDD pin. RESETn input thresholds are proportional to DVDD.
- GPIO pull-ups connect to IOVDD supply, pull-downs connect to VSS. RESETn pull-up connects to DVDD.

#### 4.15 Microcontroller Peripherals

The MCU peripherals set available in BGM220S modules includes:

- 12-bit 1 Msps ADC
- 16-bit and 32-bit Timers/Counters
- 24-bit Low Energy Timer for waveform generation
- 32-bit Real Time Counter
- USART (UART/SPI/SmartCards/IrDA/I2S)
- EUART (UART/IrDA)
- I<sup>2</sup>C peripheral interfaces
- PDM interface
- 12 Channel Peripheral Reflex System

For details on their electrical performance, consult the relevant portions of Section 4 in the SoC datasheet.

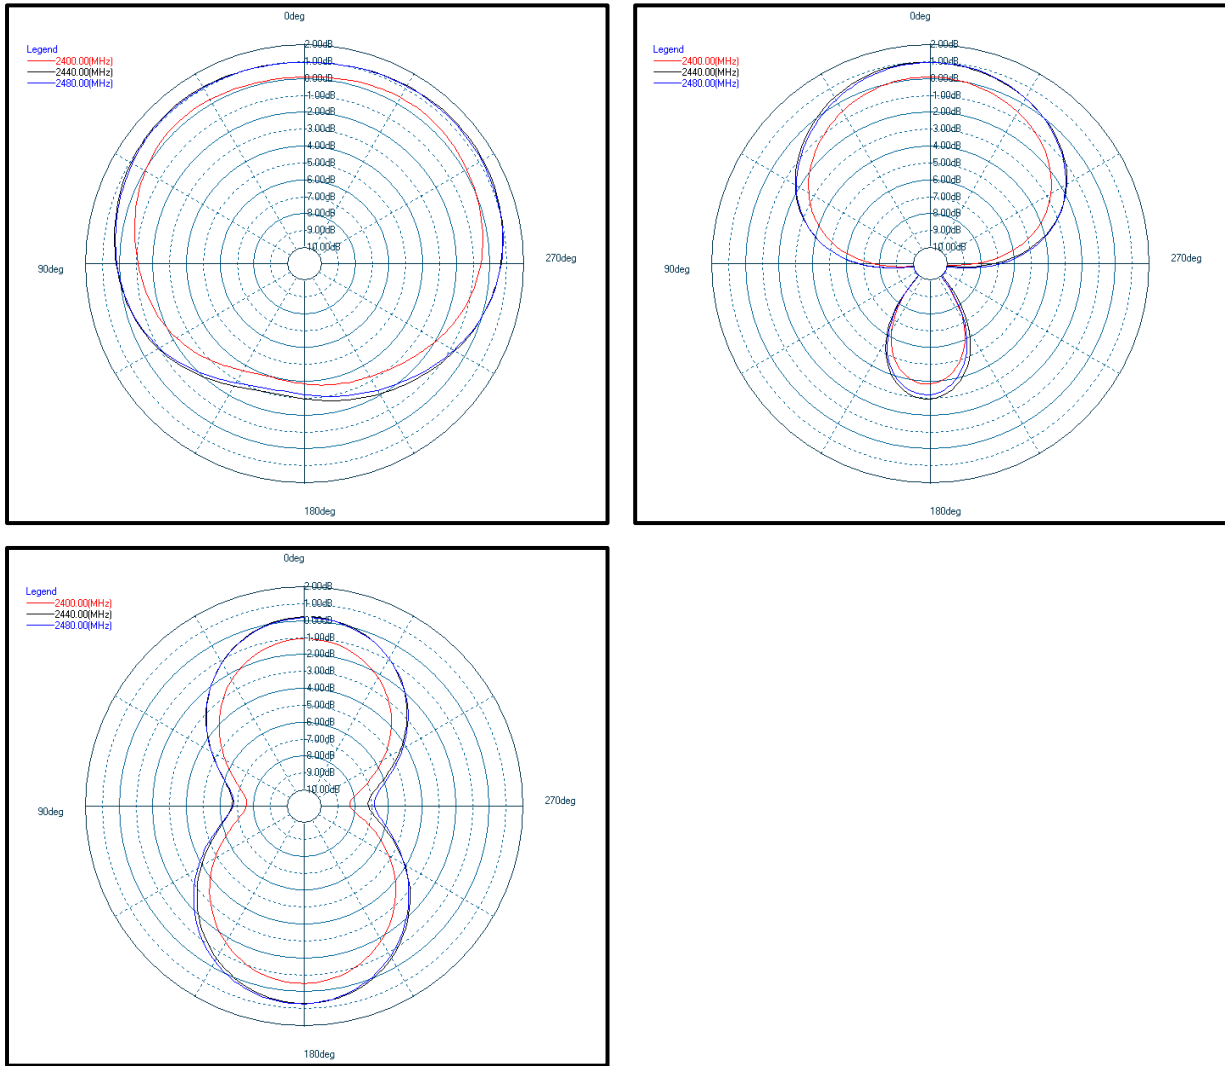

To learn which GPIO ports provide access to every peripheral, consult Analog Peripheral Connectivity and Digital Peripheral Connectivity.

#### 4.16 Typical Performance Curves

Typical performance curves indicate typical characterized performance under the stated conditions.

### 4.16.1 Antenna Typical Characteristics

Typical BGM220S radiation patterns and efficiency for the on-board chip antenna under optimal operating conditions are plotted in the figures that follow. Antenna gain and radiation patterns have a strong dependence on the size and shape of the application PCB the module is mounted on, as well as on the proximity of any mechanical design to the antenna.

**Figure 4.3. Typical 2D Antenna Radiation Patterns and Efficiency**

Top Left: Phi 0°, Top Right: Phi 90°, Bottom Left: Theta 90°

## 5. Reference Diagrams

### 5.1 Network Co-Processor (NCP) Application with UART Host

The BGM220S can be controlled over the UART interface as a peripheral to an external host processor. Typical power supply, programming/debug interface, and host interface connections are shown in the figure below. For more details, refer to *AN958: Debugging and Programming Interfaces for Custom Designs*.

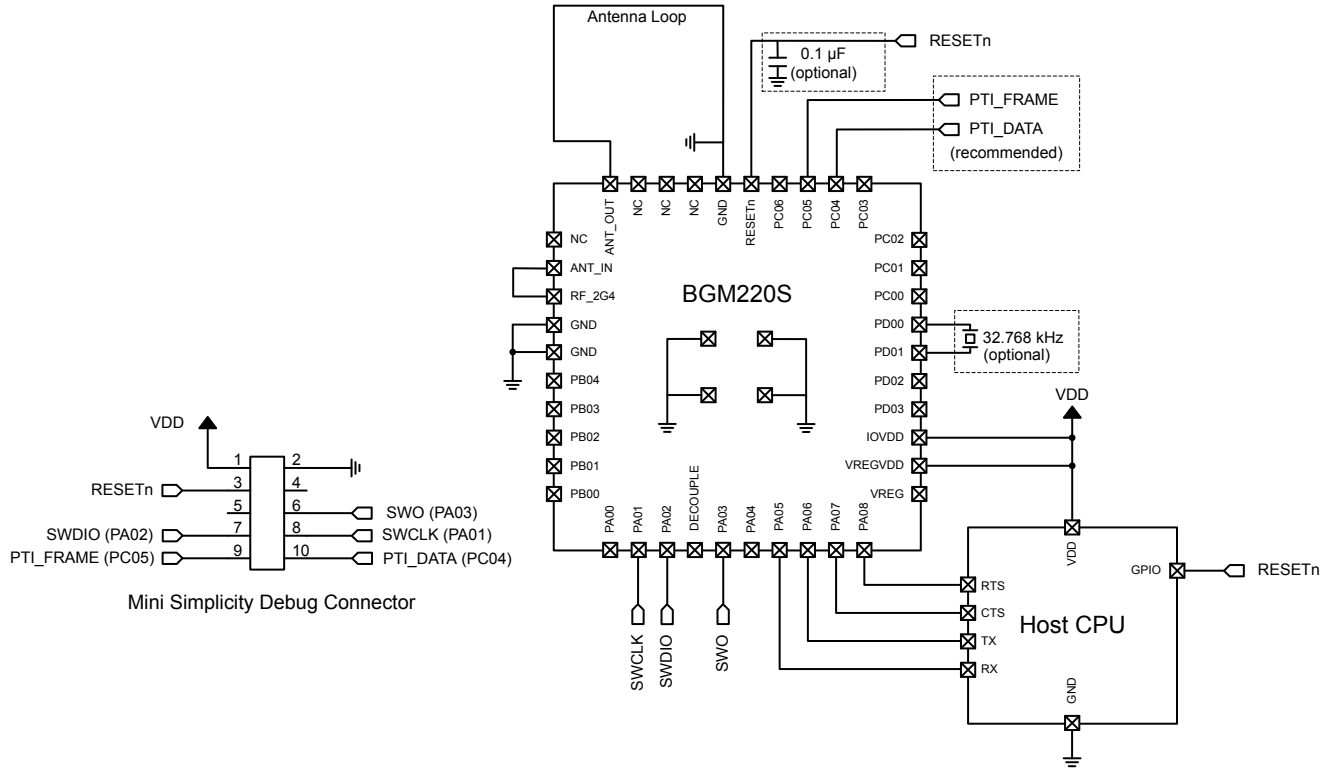

Figure 5.1. UART NCP Configuration

## 5.2 SoC Application

The BGM220S can be used in a stand-alone SoC configuration without an external host processor. Typical power supply and programming/debug interface connections are shown in the figure below. For more details, refer to *AN958: Debugging and Programming Interfaces for Custom Designs*.

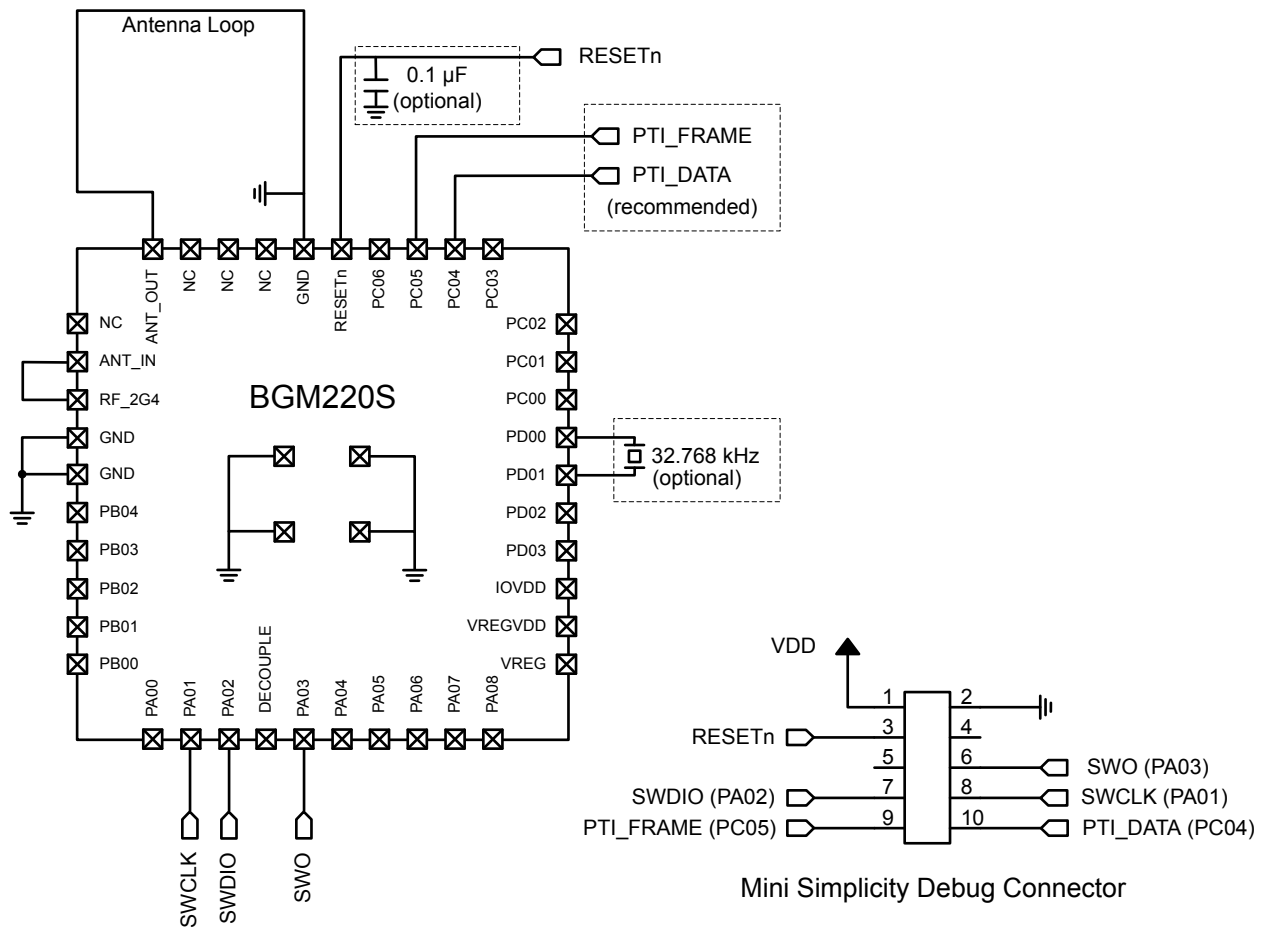

Figure 5.2. Stand-Alone SoC Configuration

## 6. Pin Definitions

### 6.1 44-Pin SiP Module Device Pinout

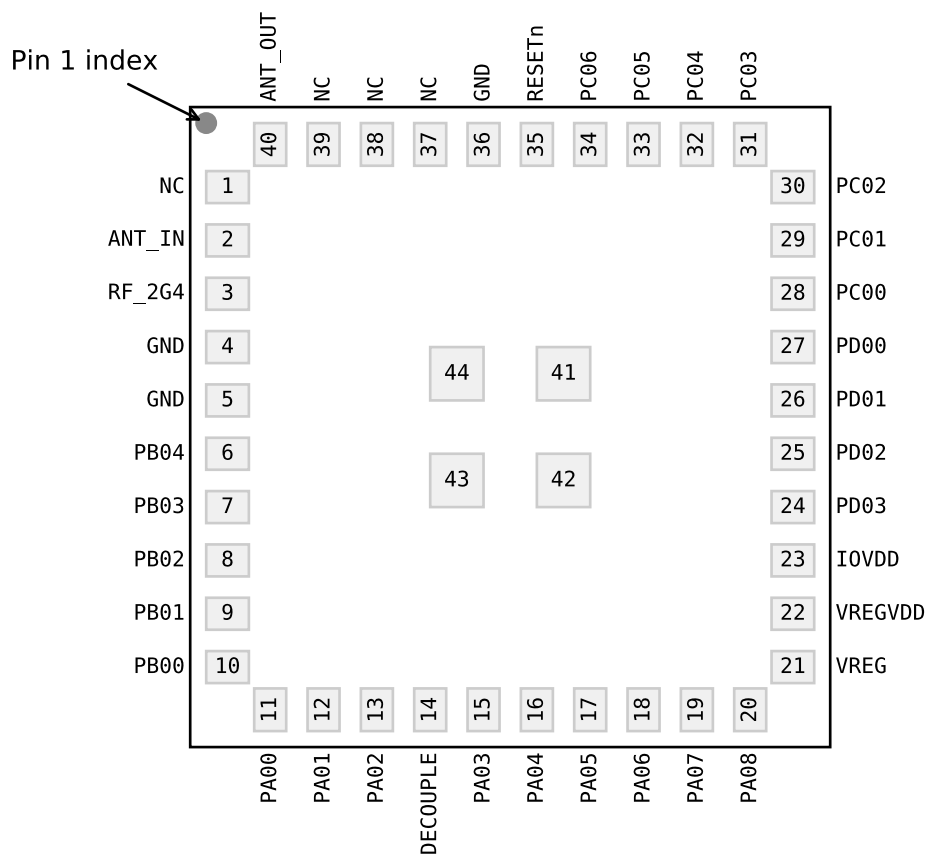

Figure 6.1. 44-Pin SiP Module Device Pinout

The following table provides package pin connections and general descriptions of pin functionality. For detailed information on the supported features for each GPIO pin, see [6.2 Alternate Function Table](#), [6.3 Analog Peripheral Connectivity](#), and [6.4 Digital Peripheral Connectivity](#).

Table 6.1. 44-Pin SiP Module Device Pinout

Pin Name	Pin(s)	Description	Pin Name	Pin(s)	Description
NC	1	Do not connect	ANT_IN	2	Antenna In
RF_2G4	3	2.4 GHz RF input/output	GND	4	Ground
GND	5	Ground	PB04	6	GPIO
PB03	7	GPIO	PB02	8	GPIO
PB01	9	GPIO	PB00	10	GPIO

Pin Name	Pin(s)	Description	Pin Name	Pin(s)	Description
PA00	11	GPIO	PA01	12	GPIO
PA02	13	GPIO	DECOUPLE	14	Decouple output for on-chip voltage regulator. This pin is internally decoupled, and should be left disconnected.
PA03	15	GPIO	PA04	16	GPIO
PA05	17	GPIO	PA06	18	GPIO
PA07	19	GPIO	PA08	20	GPIO
VREG	21	Regulated supply voltage. This pin is internally connected to the SoC DVDD, RFVDD, and PAVDD supply lines. It is not intended to power external circuitry.	VREGVDD	22	Module input power supply. This pin is internally connected to the SoC AVDD and VREGVDD supply lines.
IOVDD	23	I/O power supply	PD03	24	GPIO
PD02	25	GPIO	PD01	26	GPIO
PD00	27	GPIO	PC00	28	GPIO
PC01	29	GPIO	PC02	30	GPIO
PC03	31	GPIO	PC04	32	GPIO
PC05	33	GPIO	PC06	34	GPIO
RESETn	35	Reset Pin. The RESETn pin is internally pulled up to VREG (DVDD).	GND	36	Ground
NC	37	Do not connect	NC	38	Do not connect
NC	39	Do not connect	ANT_OUT	40	Antenna Out
GND	41	Ground	GND	42	Ground
GND	43	Ground	GND	44	Ground

## 6.2 Alternate Function Table

A wide selection of alternate functionality is available for multiplexing to various pins. The following table shows what functions are available on each device pin.

**Table 6.2. GPIO Alternate Function Table**

GPIO	Alternate Function				
PB03	GPIO.EM4WU4				
PB01	GPIO.EM4WU3				
PB00	IADC0.VREFN				
PA00	IADC0.VREFP				
PA01	GPIO.SWCLK				
PA02	GPIO.SWDIO				
PA03	GPIO.SWV	GPIO.TDO	GPIO.TRACEDA-TA0		
PA04	GPIO.TDI	GPIO.TRACECLK			
PA05	GPIO.EM4WU0				
PD02	GPIO.EM4WU9				
PD01	LFXO.LFXTAL_I	LFXO.LF_EXTCLK			
PD00	LFXO.LFXTAL_O				
PC00	GPIO.EM4WU6	GPIO.THMSW_EN			
PC05	GPIO.EM4WU7				

## 6.3 Analog Peripheral Connectivity

Many analog resources are routable and can be connected to numerous GPIO's. The table below indicates which peripherals are available on each GPIO port. When a differential connection is being used Positive inputs are restricted to the EVEN pins and Negative inputs are restricted to the ODD pins. When a single ended connection is being used positive input is available on all pins. See the device Reference Manual for more details on the ABUS and analog peripherals.

**Table 6.3. ABUS Routing Table**

Peripheral	Signal	PA		PB		PC		PD	
		EVEN	ODD	EVEN	ODD	EVEN	ODD	EVEN	ODD
IADC0	ana_neg	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
	ana_pos	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes

## 6.4 Digital Peripheral Connectivity

Many digital resources are routable and can be connected to numerous GPIO's. The table below indicates which peripherals are available on each GPIO port.

## 7. Design Guidelines

### 7.1 Layout and Placement

For optimal performance of the BGM220S the following guidelines are recommended:

- Place the module 1.50 mm from the edge of the copper “keep-in” area at the middle of the long edge of the application PCB, as illustrated in [Figure 7.1 Recommended Layout for BGM220S on page 31](#).
- Copy the exact antenna design from [Figure 7.2 Antenna Layout With Coordinates on page 32](#) with the values for coordinates A to L given in [Table 7.1 Antenna Polygon Coordinates, Referenced to Center of BGM220S on page 32](#).
- Make a cutout in all lower layers aligned with the right edge and the bottom edge of the antenna as indicated by the yellow box in [Figure 7.3 Antenna Clearance in Inner and Bottom Layers on page 33](#).
- Connect all ground pads directly to a solid ground plane in the top layer.
- Place ground vias as close to the ground pads of the BGM220S as possible.
- Place ground vias along the antenna loop right and bottom side.
- Place ground vias along the edges of the application board.
- Do not place plastic or any other dielectric material in contact with the antenna.
  - A minimum clearance of 0.5 mm is advised.
  - Solder mask, conformal coating and other thin dielectric layers are acceptable directly on top of the antenna region.

Figure 7.1. Recommended Layout for BGM220S

Figure 7.2. Antenna Layout With Coordinates

Table 7.1. Antenna Polygon Coordinates, Referenced to Center of BGM220S

Point	Coordinates (mm)
A	2.87, 2.13
B	2.54, 2.13
C	2.54, 3.69
D	3.36, 4.51
E	8.85, 4.51
F	8.85, 4.15

J	3.97, 3.81
K	3.10, 3.81
L	2.87, 3.58

Figure 7.3. Antenna Clearance in Inner and Bottom Layers

## 7.2 Best Design Practices

The design of a good RF system relies on thoughtful placement and routing of the RF signals. The following guidelines are recommended:

- Place the BGM220S and antenna close to the center of the longest edge of the application board.
- Do not place any circuitry between the board edge and the antenna.
- Make sure to tie all GND planes in the application board together with as many vias as can be fitted.
- Generally ground planes are recommended in all areas of the application board except in the antenna keep-out area shown in [Figure 7.3 Antenna Clearance in Inner and Bottom Layers on page 33](#).
- Open-ended stubs of copper in the outer layer ground planes must be removed if they are more than 5 mm long to avoid radiation of spurious emissions.
- The width of the GND plane to the sides of the BGM220S will impact the efficiency of the on-board chip antenna.
  - To achieve optimal performance, a GND plane width of 50 mm is recommended as seen on [Figure 7.4 Illustration of Recommended Board Width on page 34](#).
  - See [4.16.1 Antenna Typical Characteristics](#) for reference.

[Figure 7.5 Non-Optimal Layout Examples on page 35](#) illustrates layout scenarios that will lead to severely degraded RF performance for the application board.

**Figure 7.4. Illustration of Recommended Board Width**

Figure 7.5. Non-Optimal Layout Examples

### 7.3 Radio Performance vs. Carrier Board Size

For many applications, the carrier board size is determined by the overall form factor or size of the additional circuitry. The recommended carrier board width of 50 mm is thus not always possible in the end-application. If another form factor is required, the antenna performance of the integrated antenna will be compromised but it may still be sufficiently good for providing the required link quality and range of the end-application. [Figure 7.6 Efficiency of the Integrated Antenna as Function of the Carrier Board Size on page 36](#) shows the total efficiency of the integrated antenna for different carrier board sizes. As can be seen the best performance is achieved for the carrier board size of 50 mm x 30 mm with relatively constant performance for larger boards and rapidly declining performance for smaller boards.

The performance of all the sizes tested will be adequate for more than 15 m line-of-sight range and all of the sizes are thus usable.

**WARNING: Any antenna tuning or change of the loop dimensions will void the modular certification of modules with modular certification. In that case, a Permissions Change to the modular approval is required.**

Figure 7.6. Efficiency of the Integrated Antenna as Function of the Carrier Board Size

### 7.4 Proximity to Other Materials

Placing plastic or any other dielectric material directly in contact with the antenna may cause performance degradation. A clearance of minimum 0.5 mm is recommended to avoid excessive detuning of the antenna. Solder mask, conformal coating, and other thin dielectric layers are acceptable directly on top of the antenna region. Any metallic objects in close proximity to the antenna will prevent the antenna from radiating freely. The minimum recommended distance of metallic and/or conductive objects is 10 mm in any direction from the antenna except in the directions of the application PCB ground planes.

### 7.5 Proximity to Human Body

Placing the module in contact with or very close to the human body will negatively impact antenna efficiency and reduce range. Furthermore, additional certification may be required if the module is used in a wearable device.

## 8. Package Specifications

### 8.1 Package Dimensions

The package dimensions are shown in [Figure 8.1 Package Dimensions - Full](#) on page 37 and [Figure 8.2 Package Dimensions - Detail](#) on page 37.

**Figure 8.1. Package Dimensions - Full**

**Figure 8.2. Package Dimensions - Detail**

Table 8.1. Package Dimensions

Dimension	MIN	NOM	MAX
A	1.080	1.180	1.280
A1	0.140	0.180	0.220

**Note:**

1. The dimensions in parenthesis are reference.
2. All dimensions in millimeters (mm).
3. Unless otherwise specified, tolerances are:
  - a. Decimal: X.X = +/- 0.1  
X.XX = +/- 0.05  
X.XXX = +/- 0.03
  - b. Angular: +/- 0.1 (In Deg)
4. Hatching lines means package shielding area.

## 8.2 Recommended PCB Land Pattern

The recommended PCB Land Pattern is shown in [Figure 8.3 Module Land Pattern on page 39](#)

**Figure 8.3. Module Land Pattern**

**Table 8.2. PCB Land Pattern Dimensions**

Dimension	Typ (mm)
D1	4.50
D2	2.65
E1	4.50
E2	2.25
eD1	0.45
eD2	0.90
b	0.25
e	0.50
L	0.35
L1	0.50

**Note:**

1. All feature sizes shown are at Maximum Material Condition (MMC) and a card fabrication tolerance of 0.05mm is assumed.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
4. The stencil thickness should be 0.100 mm (4 mils).
5. The stencil aperture to land pad size recommendation is 80% paste coverage.
6. **Above notes and stencil design are shared as recommendations only. A customer or user may find it necessary to use different parameters and fine tune their SMT process as required for their application and tooling.**

### 8.3 Top Marking

Figure 8.4. BGM220S Top Marking

Table 8.3. Top Marking Definition

OPN	Line 1 Marking	Line 2 Marking	Line 3 Marking
BGM220SC12WGA2	BGM220S12A	SC12WGA2	See note below
<b>Note:</b> YY = Year. WW = Work Week, TTTTTTTT = Trace Code			

## 9. Soldering Recommendations

It is recommended that final PCB assembly of the BGM220S follows the industry standard as identified by the Institute for Printed Circuits (IPC). This product is assembled in compliance with the J-STD-001 requirements and the guidelines of IPC-AJ-820. Surface mounting of this product by the end user is recommended to follow IPC-A-610 to meet or exceed class 2 requirements.

### **CLASS 1 General Electronic Products**

Includes products suitable for applications where the major requirement is function of the completed assembly.

### **CLASS 2 Dedicated Service Electronic Products**

Includes products where continued performance and extended life is required, and for which uninterrupted service is desired but not critical. Typically the end-use environment would not cause failures.

### **CLASS 3 High Performance/Harsh Environment Electronic Products**

Includes products where continued high performance or performance-on-demand is critical, equipment downtime cannot be tolerated, end-use environment may be uncommonly harsh, and the equipment must function when required, such as life support or other critical systems.

## 10. Tape and Reel

BGM220S modules are delivered to the customer in tray (490 pcs / tray) or reel (2500 pcs / reel) packaging with the dimensions below. All dimensions are given in mm unless otherwise indicated.

Figure 10.1. Carrier Tape Dimensions

Figure 10.2. Reel Dimensions

## 11. Certifications

This section details the regulatory certification status of the module in various regions.

The address for the module manufacturer and certification applicant is:

SILICON LABORATORIES FINLAND OY  
Alberga Business Park, Bertel Jungin aukio 3,  
02600 Espoo, Finland

### 11.1 Qualified Antennas

BGM220S modules have been tested and certified both with the on-board antenna and with an external antenna attached to the RF pin (RF\_2G4). Performance characteristics for the chip antenna are presented in [Table 3.1 Antenna Efficiency and Peak Gain on page 7](#) and [4.16.1 Antenna Typical Characteristics](#). Details for the external antenna qualified are summarized in the table below.

**Table 11.1. Qualified External Antennas for BGM220S**

Antenna Type	Maximum Gain	Impedance
Connectorized Coaxial Dipole	3.2 dBi	50 $\Omega$

Any external antenna of the same general type and of equal or less directional gain as listed in the above table, and having similar in-band and out-of-band characteristics, can be used in the regulatory areas that have a full modular radio approval (USA, Canada, Korea, Japan) as long as spot-check testing is performed to verify that no performance changes compromising compliance have been introduced. In countries applying the ETSI standards, like the EU countries, the radiated emissions are always tested with the end-product and the antenna type is not critical, but antennas with higher gain may violate some of the regulatory limits.

When using instead an external antenna of a different type (such as a chip antenna, a PCB trace antenna or a patch) or having non-similar in-band and out-of-band characteristics, but still with a gain less than or equal to the maximum gain listed in the table above, it can be added as a permissive change to the existing grant/certificate. In most of these cases, some radiated emission testing is demanded, but no modular or end-product re-certification is required.

On the other hand, all products with antennas having more gain than the maximum gain listed in the table above are very likely to require a full new end-product certification. Since the exact permissive change procedure is chosen on a case by case basis, please consult your test house and/or a certification body for understanding the correct approach based on your unique design. You might also want or need to get in touch with Silicon Labs for any authorization letter that your certification body might ask for.

### 11.2 EU - CE

The BGM220S modules are in conformity with the essential requirements and other relevant requirements of the Radio Equipment Directive (RED) (2014/53/EU).

Please note that every application using the BGM220S module will need to perform the radio EMC tests on the end product, according to EN 301 489-17.

It is ultimately the responsibility of the manufacturer to ensure the compliance of the end-product as a whole. The specific product assembly may have an impact to RF radiated characteristics, and manufacturers should carefully consider RF radiated testing with the end-product assembly.

A formal Declaration of Conformity (DoC) is available at the product web page which is reachable starting from <https://www.silabs.com/>.

### 11.3 USA - FCC

This device complies with Part 15 of the FCC Rules when operating with the embedded antenna or with the antenna type(s) listed in [Table 11.1 Qualified External Antennas for BGM220S on page 44](#). Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesirable operation.

Any changes or modifications not expressly approved by Silicon Labs could void the user's authority to operate the equipment.

## FCC RF Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance.

This transmitter meets the Mobile requirements at a distance of 20 cm and above from the human body, in accordance to the limit(s) exposed in the RF Exposure Analysis.

This transmitter also meets the Portable requirements at distances equal or above those listed for convenience in [Table 11.2 Minimum Separation Distances for SAR Evaluation Exemption on page 49](#).

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures.

## OEM Responsibilities to comply with FCC Regulations

This module has been tested for compliance to FCC Part 15.

OEM integrators are responsible for testing their end-product for any additional compliance requirements needed with this module installed (for example, digital device emissions, PC peripheral requirements, etc.). Additionally, investigative measurements and spot checking are strongly recommended to verify that the full system compliance is maintained when the module is integrated, in accordance to the "Host Product Testing Guidance" in FCC's KDB 996369 D04 Module Integration Guide V01.

- **General Considerations**

This transmitter module is tested as a subsystem and its certification does not cover the FCC Part 15 Subpart B (unintentional radiator) rule requirement, which is applicable to the final host. The final host will need to be assessed for compliance to this portion of rule requirements, if applicable.

- **Manual Information to the End User**

The OEM integrator has to be aware not to provide information to the end-user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warnings as shown in this manual.

- **OEM / Host Manufacturer Responsibilities**

OEM/Host manufacturers are ultimately responsible for the compliance of the host system. The BGM220S12A has a limited single-modular transmitter approval due to the radio portion of the module not being contained in its own RF shielding. Consequently, each new host will require a reassessment of radiated spurious emissions and a Class I Permissive Change to the grant. The final product must be reassessed against all the essential requirements of the FCC rule such as FCC Part 15 Subpart B before it can be placed on the US market. This includes reassessing the transmitter module for compliance with the Radio and EMF essential requirements of the FCC rules. This module must not be incorporated into any other device or system without retesting for compliance as multi-radio and combined equipment.

## Separation

- To meet the SAR exemption for portable conditions, the minimum separation distance indicated in [Table 11.2 Minimum Separation Distances for SAR Evaluation Exemption on page 49](#) must be maintained between the human body and the radiator (antenna) at all times.
- This transmitter module is tested in a standalone mobile RF exposure condition, and in case of any co-located radio transmitter being allowed to transmit simultaneously, or in case of portable use at closer distances from the human body than those allowing the exceptions rules to be applied, a separate additional SAR evaluation will be required, ultimately leading to a Class II Permissive Change, or more rarely to a new grant.
- **Important Note:** In the event that these conditions cannot be met, the final product will have to undergo additional testing to evaluate the RF exposure in order for the FCC authorization to remain valid, and a permissive change will have to be applied. The evaluation (SAR) is in the responsibility of the end-product's manufacturer, as well as the permissive change that can be carried out with the help of the customer's own Telecommunication Certification Body as the grant holder's agent.

## End Product Labeling

BGM220S modules are not labeled with their own FCC ID due to their size. Instead, the packaging label contains the FCC ID. In all cases when the FCC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. In that case, the final end product must be labeled in a visible area with the following:

**"Contains Transmitter Module FCC ID: QOQ-BGM220S"**

Or

**"Contains FCC ID: QOQ-BGM220S"**

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module or change RF related parameters in the user manual of the end product.

As long as all conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

## 11.4 ISED Canada

### ISED

This radio transmitter (IC: 5123A-BGM220S) has been approved by *Innovation, Science and Economic Development Canada (ISED Canada, formerly Industry Canada)* to operate with the embedded antenna and with the antenna type(s) listed in [11.1 Qualified Antennas](#), with the maximum permissible gain indicated. Antenna types not included in this list, having a gain greater than the maximum gain listed, are strictly prohibited for use with this device.

This device complies with ISED's license-exempt RSS standards. Operation is subject to the following two conditions:

1. This device may not cause interference; and
2. This device must accept any interference, including interference that may cause undesired operation of the device

### RF Exposure Statement

Exception from routine SAR evaluation limits are given in RSS-102 Issue 5.

The module meets the given requirements when the minimum separation distance to human body is as indicated in [Table 11.2 Minimum Separation Distances for SAR Evaluation Exemption on page 49](#).

RF exposure or SAR evaluation is not required when the separation distances from the human body are equal or above those stated in [Table 11.2 Minimum Separation Distances for SAR Evaluation Exemption on page 49](#). If the separation distance is less than stated in [Table 11.2 Minimum Separation Distances for SAR Evaluation Exemption on page 49](#) the OEM integrator is responsible for evaluating the SAR.

### OEM Responsibilities to comply with IC Regulations

The module has been certified for integration into products only by OEM integrators under the following conditions:

- The antenna must be installed such that a minimum separation distance as stated above is maintained between the radiator (antenna) and all persons at all times.
- The transmitter module must not be co-located or operating in conjunction with any other antenna or transmitter.

**Important Note:** In the event that these conditions cannot be met, the final product will have to undergo additional testing to evaluate the RF exposure in order for the ISED authorization to remain valid, and a permissive change will have to be applied with the help of the customer's own Telecommunication Certification Body typically acting as the certificate holder's agent. In the case of the BGM220S12A, this variant has a limited approval due to the radio portion of the module not being contained in its own RF shielding; consequently, each new host will require a reassessment of the radiated spurious emissions, and the ISED will have to be notified with a Class IV Permissive Change.

### End Product Labeling

The BGM220S modules are not labeled with their own IC ID due to their size. In all cases when the IC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. In that case, the final end product must be labeled in a visible area with the following:

**“Contains Transmitter Module IC: 5123A-BGM220S ”**

or

**“Contains IC: 5123A-BGM220S”**

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module or change RF related parameters in the user manual of the end product.

As long as all the conditions above are met, further transmitter testing will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

## ISED (Français)

Le présent émetteur radio (IC: 5123A-BGM220S) a été approuvé par Innovation, Sciences et Développement Économique Canada (ISED Canada, anciennement Industrie Canada) pour fonctionner avec l'antenne intégrée et le ou les types d'antenne énumérés à la section [11.1 Qualified Antennas](#), avec le gain maximal admissible indiqué. Les types d'antenne non inclus dans cette liste, ayant un gain supérieur au gain maximal indiqué, sont strictement interdits d'utilisation avec cet appareil. .

Ce composant est conforme aux normes RSS, exonérées de licence d'ISED. Son mode de fonctionnement est soumis aux deux conditions suivantes:

1. Ce composant ne doit pas générer d'interférences.
2. Ce composant doit pouvoir être soumis à tout type de perturbation y compris celle pouvant nuire à son bon fonctionnement.

### Déclaration d'exposition RF

L'exception tirée des limites courantes d'évaluation SAR est donnée dans le document RSS-102 Issue 5.

Les modèles BGM220S respectent les exigences d'exemption prévues lorsque la distance de séparation minimale entre le(s) antenne(s) et le corps humain est conforme aux valeurs indiquées dans le [Table 11.2 Minimum Separation Distances for SAR Evaluation Exemption on page 49](#).

La déclaration d'exposition RF ou l'évaluation DAS n'est pas nécessaire lorsque la distance de séparation est identique ou supérieure à celle indiquée ci-dessus. Si la distance de séparation est inférieure à celle mentionnées plus haut, il incombe à l'intégrateur OEM de procéder à une évaluation DAS.

La déclaration d'exposition RF ou l'évaluation SAR n'est pas nécessaire lorsque la distance de séparation est identique ou supérieure à celle indiquée ci-dessus. Si la distance de séparation est inférieure à celle mentionnées plus haut, il incombe à l'intégrateur OEM de procéder à une évaluation SAR.

### Responsabilités des OEM pour une mise en conformité avec le Règlement du Circuit Intégré

Le module a été approuvé pour l'intégration dans des produits finaux exclusivement réalisés par des OEM sous les conditions suivantes:

- L'antenne doit être installée de sorte qu'une distance de séparation minimale indiquée ci-dessus soit maintenue entre le radiateur (antenne) et toutes les personnes avoisinante, ce à tout moment.
- Le module émetteur ne doit pas être localisé ou fonctionner avec une autre antenne ou un autre transmetteur que celle indiquée plus haut.

Tant que les deux conditions ci-dessus sont respectées, il n'est pas nécessaire de tester ce transmetteur de façon plus poussée. Cependant, il incombe à l'intégrateur OEM de s'assurer de la bonne conformité du produit fini avec les autres normes auxquelles il pourrait être soumis de fait de l'utilisation de ce module (par exemple, les émissions des périphériques numériques, les exigences de périphériques PC, etc.).

**Remarque Importante:** Dans le cas où ces conditions ne peuvent être satisfaites (pour certaines configurations ou co-implantation avec un autre émetteur), l'autorisation ISED n'est plus considérée comme valide et le numéro d'identification ID IC ne peut pas être apposé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera responsable de la réévaluation du produit final (y compris le transmetteur) et de l'obtention d'une autorisation ISED distincte. Dans le cas du BGM220S12A, l'approbation de cette variante est limitée car la partie radio du module n'est pas incluse dans son propre blindage RF: par conséquent, chaque nouvel hôte est requis dans tous les cas pour réévaluer les émissions rayonnées et le bureau doit être informé par un C4PC.

### Étiquetage des produits finis

Les modules BGM220S ne sont pas étiquetés avec leur propre ID IC en raison de leur taille. Dans tous les cas, lorsque l'ID IC n'est pas visible lorsque le module est intégré au sein d'un autre produit, cet autre produit dans lequel le module est installé devra porter une étiquette faisant apparaître les référence du module intégré. Dans un tel cas, sur le produit final doit se trouver une étiquette aisément lisible sur laquelle figurent les informations suivantes:

**“Contient le module transmetteur: 5123A-BGM220S ”**

or

**“Contient le circuit: 5123A-BGM220S”**

L'intégrateur OEM doit être conscient qu'il ne doit pas fournir, dans le manuel d'utilisation, d'informations relatives à la façon d'installer ou de d'enlever ce module RF ainsi que sur la procédure à suivre pour modifier les paramètres liés à la radio.

## 11.5 Proximity to Human Body

When using the module in an application where the radio is located close to the human body, the human RF exposure must be evaluated. FCC, ISED, and CE all have different standards for evaluating the RF exposure, and because of this, each standard requires a different minimum separation distance between the module and human body. Certification of BGM220S allows for the minimum separation distances detailed in the table below in portable use cases (less than 20 cm from human body). The module is approved for the mobile use case (more than 20 cm) without any need for RF exposure evaluation.

**Table 11.2. Minimum Separation Distances for SAR Evaluation Exemption**

Certification	BGM220SC12WGA2
FCC	0 mm
ISED	0 mm
CE	The RF exposure must always be evaluated using the end-product when transmitting with power levels higher than 20 mW (13 dBm).

For FCC and ISED, using the module in end-products where the separation distance from the human body is smaller than that listed above is allowed but requires evaluation of the RF exposure in the final assembly and applying for a *Class 2 Permissive Change* or *Change of ID* to be applied to the existing FCC/ISED approvals of the module. For CE, RF exposure must be evaluated using the end-product in all cases when transmitting at more than the power level indicated in the table.

**Note:** Placing the module in touch or very close to the human body will have a negative impact on the efficiency of the antenna thus a reduced range is to be expected.

## 11.6 Japan - MIC

The BGM22S12A are certified in Japan with certification number 203-JN1080.

It is the end-product manufacturer's responsibility to ensure that the module is configured to meet the limits documented in the formal certification test report available at <https://www.silabs.com/>. If needed, refer to the API reference manual(s) to learn how to configure the maximum RF TX power for the normal operations.

Since September 1, 2014 it is allowed (and highly recommended) that a manufacturer who integrates a radio module in their host equipment places the certification mark and certification number on the outside of the host equipment. This combination of mark and number, and their relative placement, is depicted in figure 11.1, and depending on the size of the module it might also appear on the top shield markings of the radio module. The certification mark and certification number must be placed close to the text in the Japanese language which is provided below. This change in the Radio Law has been made in order to enable users of the combination of host and radio module to verify if they are actually using a radio device which is approved for use in Japan

Certification Text to be Placed on the Outside Surface of the Host Equipment:

当該機器には電波法に基づく、技術基準適合証明等を受けた特定無線設備を装着している。

### Translation of the text:

"This equipment contains specified radio equipment that has been certified to the Technical Regulation Conformity Certification under the Radio Law."

The "Giteki" marking shown in the figures below must be affixed to an easily noticeable section of the specified radio equipment.

Note that additional information may be required if the device is also subject to a telecom approval.

Figure 11.1. GITEKI Mark and ID

Figure 11.2. GITEKI Mark

## 11.7 Bluetooth Qualification

The BGM220S modules come with a pre-qualified RF-PHY component having Declaration ID of TBD and QDID of TBD.

This component can be combined with the latest Link Layer and Host pre-qualified components when in the process of qualifying the end-product via the SIG's Launch Studio.

## 12. Revision History

### Revision 0.6

June, 2020

- Updated [4.2.1 DC-DC Operating Limits](#) to relax lifetime safe operating region.
- Updated [5. Reference Diagrams](#) to mark PTI interface as recommended in figures.
- Updated [4. Electrical Characteristics](#) with latest characterization results and limits.
- Updated [11. Certifications](#) with additional certification details.

### Revision 0.5

March, 2019

- In the front page block diagram, updated the lowest energy mode for LETIMER.
- Updated part numbers in [2. Ordering Information](#) to reflect new ordering code scheme.
- In [2. Ordering Information](#), added note about referencing by family, model, or ordering code.
- Added [4.13 Precision Low Frequency RC Oscillator \(LFRCO\)](#).
- Added supply voltage, crystal frequencies and RF frequencies to [Figure 3.1 BGM220S Block Diagram on page 6](#).
- Updated [4. Electrical Characteristics](#) with latest characterization details.
- Updated [5. Reference Diagrams](#).
- Added section [11. Certifications](#).
- Added section [5. Reference Diagrams](#).
- Added section [10. Tape and Reel](#).

### Revision 0.1

September, 2019

Initial release.

Silicon Labs
