To whom it may concern,

Differences between BGM11S1A and BGM11S2A

This application contains two models for the BGM11S module: BGM11S1A and BGM11S2A. The only difference between these two models is the maximum RF output power which in case of BGM11S1A is limited by software to nominal 3 dBm. For BGM11S2A the maximum RF output power is nominally 10 dBm.

Sincerely,

Pasi Rahikkala

Staff HW Engineer
