## 2. Client Information

## 2.1. Applicant Information

| Company Name: | Mobiwire SAS  |
|---------------|---|
| Address:      | 79 AVENUE FRANCOIS ARAGO 92017 NANTERRE CEDEX France. |
| Telephone:    | +33668018722  |
| Postcode:     | 1   |

### 2.2. Manufacturer Information

| Company Name: | Mobiwire SAS  |
|---------------|---|
| Address:      | 79 AVENUE FRANCOIS ARAGO 92017 NANTERRE CEDEX France. |
| Telephone:    | +33668018722  |
| Postcode:     | 1   |

## 3. Equipment Under Test (EUT) and Ancillary Equipment (AE)

### 3.1. About EUT

| EUT Description          | 3G Smart phone                      |  |
|--------------------------|-------------------------------------|--|
| Model name               | MobiWire Kanuna, Altice S22         |  |
| BLE Frequency            | 2402MHz-2480MHz                     |  |
| BLE Channel              | Channel0-Channel39                  |  |
| BLE Modulation           | GFSK;                               |  |
| GSM Frequency Band       | GSM850/GSM900/GSM1800/GSM1900       |  |
| UMTS Frequency Band      | Band 1/2/5/8                        |  |
| CDMA Frequency Band      | NA                                  |  |
| LTE Frequency Band       | NA                                  |  |
| Additional Communication | BT/BLE/2.4G WLAN 802.11 b/g/n20/n40 |  |
| Function                 |                                     |  |
| Extreme Temperature      | <b>-30/+50</b> ℃                    |  |
| Nominal Voltage          | 3.8V                                |  |
| Extreme High Voltage     | 4.35V                               |  |
| Extreme Low Voltage      | 3.6V                                |  |

Note: Photographs of EUT are shown in ANNEX A of this test report.

## 3.2. Internal Identification of EUT used during the test

| EUT ID* | Model Name     | SN or IMEI  | HW      | SW Version       | Date of    |
|---------|----------------|-------------|---------|------------------|------------|
|         |                |             | Version |                  | receipt    |
| N01     | MobiWire       | 35438110000 | V01D    | ALTICE_S22_DS_O_ | 2018-10-29 |
|         | Kanuna, Altice | 0013        |         | T_L_V01.1_181016 |            |
|         | S22            |             |         |                  |            |
| N06     | MobiWire       | 35438110000 | V01D    | ALTICE_S22_DS_O_ | 2018-10-29 |
|         | Kanuna, Altice | 0062        |         | T_L_V01.1_181016 |            |
|         | S22            |             |         |                  |            |

\*EUT ID: is used to identify the test sample in the lab internally.

## 3.3. Internal Identification of AE used during the test

| AE ID* | Description | SN |
|--------|-------------|----|
| AE1    | RF cable    |    |

\*AE ID: is used to identify the test sample in the lab internally.

## 4. Reference Documents

#### 4.1. Reference Documents for testing

The following documents listed in this section are referred for testing.

| Reference   | Title   | Version    |
|-------------|---|------------|
| FCC Part15  | FCC CFR 47, Part 15,Subpart C:<br>15.205 Restricted bands of operation;<br>15.209 Radiated emission limits, general<br>requirements;<br>15.247 Operation within the bands<br>902-928MHz,<br>2400-2483.5MHz, and 5725-5850MHz. | 2017/10/01 |
| ANSI C63.10 | American National Standard of Procedures for<br>Compliance Testing of Unlicensed Wireless<br>Devices  | 2013       |

## 5. Summary of Test Results

A brief summary of the tests carried out is shown as following.

| Measurement Items                          | Sub-clause of<br>Part15C | Sub-claus<br>e of IC | Verdict |
|--|--------------------------|----------------------|---------|
| Maximum Peak Output Power                  | 15.247(b)                | 1                    | Р       |
| Peak Power Spectral Density 15.247(e)      |                          | 1                    | Р       |
| 6dB Occupied Bandwidth                     | 15.247(a)                | 1                    | Р       |
| Band Edges Compliance                      | 15.247(d)                | 1                    | Р       |
| Transmitter Spurious<br>Emission-Conducted | 15.247                   | 1                    | Р       |
| Transmitter Spurious<br>Emission-Radiated  | 15.247                   | 1                    | Р       |
| AC Powerline Conducted<br>Emission         | 15.107,15.207            | /                    | Р       |

Please refer to part 5 for detail.

The measurements are according to ANSI C63.10.

Terms used in Verdict column

| Р  | Pass, the EUT complies with the essential requirements in the standard.        |  |
|----|--|--|
| NP | Not Perform, the test was not performed by ECIT.                               |  |
| NA | Not Applicable, the test was not applicable.                                   |  |
| F  | Fail, the EUT does not comply with the essential requirements in the standard. |  |

**Test Conditions** 

| Tnom | Normal Temperature |  |  |
|------|--------------------|--|--|
| Tmin | Low Temperature    |  |  |
| Tmax | High Temperature   |  |  |
| Vnom | Normal Voltage     |  |  |
| Vmin | Low Voltage        |  |  |
| Vmax | High Voltage       |  |  |
| Hnom | Norm Humidity      |  |  |
| Anom | Norm Air Pressure  |  |  |

For this report, all the test case listed above are tested under Normal Temperature and Normal Voltage, and also under norm humidity, the specific conditions as following:

| Temperature  | Tnom | <b>25</b> ℃ |
|--------------|------|-------------|
| Voltage      | Vnom | 3.8V        |
| Humidity     | Hnom | 48%         |
| Air Pressure | Anom | 1010hPa     |

#### Note:

a. All the test data for each data were verified, but only the worst case was reported.

- b. The GFSK was set in DH1.
- c. The DC and low frequency voltages' measurement uncertainty is ±2%.

#### 5.1. Notes

All reported tests were carried out on a sample equipment to demonstrate limited compliance with section 3.

The test results of this test report relate exclusively to the item(s) tested as specified in section 5.

#### 5.2. Statements

The MobiWire Kanuna, Altice S22, supporting GSM/GPRS/WCDMA/BT/BLE/WLAN, manufactured by Mobiwire SAS, which is a new product for testing.

ECIT has verified that the compliance of the tested device specified in section 5 of this test report is successfully evaluated according to the procedure and test methods as defined in type certification requirement listed in section 5 of this test report.

### 6. Test result

#### 6.1. Peak Output Power-Conducted

#### 6.1.1 Measurement Limit

| Standard              | Limit (dBm) |
|-----------------------|-------------|
| FCC Part 15.247(b)(1) | < 30        |

#### 6.1.2 Test Condition:

| DTS procedure | RBW  | VBW   | Span | Sweeptime |
|---------------|------|-------|------|-----------|
| BT-LE         | 3MHz | 10MHz | 9MHz | Auto      |

#### 6.1.3 Test procedure

The measurement is according to ANSI C63.10 clause 11.9.1

a) Set the RBW  $\geq$  DTS bandwidth.

b) Set VBW  $\geq$  [3  $\times$  RBW].

- c) Set span  $\geq$  [3  $\times$  RBW].
- d) Sweep time = auto couple.
- e) Detector = peak.
- f) Trace mode = max hold.
- g) Allow trace to fully stabilize.

h) Use peak marker function to determine the peak amplitude level.

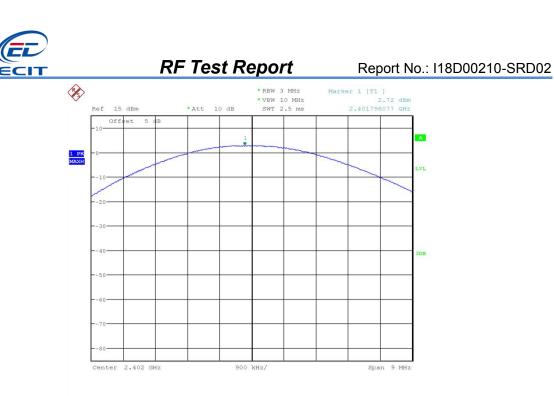

#### 6.1.4 Measurement Results:

#### For GFSK

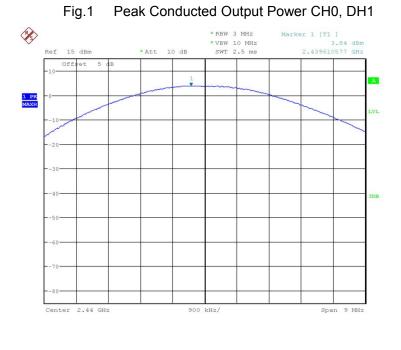

| Channel               | Ch0 2402<br>MHz | Ch19 2440<br>MHz | CH39 2480<br>MHz | Conclusion |
|-----------------------|-----------------|------------------|------------------|------------|
| Peak<br>Conducted     | 2.716           | 3.837            | 3.853            | Р          |
| Output Power<br>(dBm) | Fig.1           | Fig.2            | Fig.3            | r          |

Conclusion: PASS

#### Test graphs an below

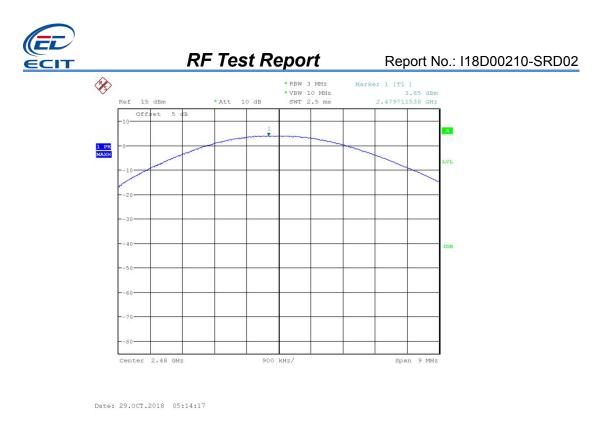

Date: 29.0CT.2018 05:11:47

Date: 29.0CT.2018 05:12:05

Fig.2 Peak Conducted Output Power CH19, DH1

## 6.2. Peak Power Spectral Density

#### 6.2.1 Measurement Limit:

| Standard               | Limit        |  |
|------------------------|--------------|--|
| FCC CFR Part 15.247(e) | < 8dBm/3 KHz |  |

#### 6.2.2 Test procedures

The measurement is according to ANSI C63.10 clause 11.10.

- 1. The output power of EUT was connected to the spectrum analyzer. The path loss was compensated to the results for each measurement.
- 2. Enable EUT transmitter maximum power continuously.
- 3. Set analyzer center frequency to DTS channel center frequency.
- 4. Set the span to 1.5 times the DTS bandwidth.
- 5. Set the RBW to 3 kHz  $\leq$  RBW  $\leq$  100 kHz.
- 6. Set the VBW  $\geq$  [3  $\times$  RBW].
- 7. Detector = peak.
- 8. Sweep time = auto couple.
- 9. Trace mode = max hold.
- 10. Allow trace to fully stabilize.
- 11. Use the peak marker function to determine the maximum amplitude level within the RBW.
- 12. If measured value exceeds requirement, then reduce RBW (but no less than 3 kHz) and repeat.

#### 6.2.3 Measurement Uncertainty:

| Measurement Uncertainty | 0.75dB |  |
|-------------------------|--------|--|
|                         |        |  |

#### 6.2.4 Measurement Results:

| Mode  | Channel | Power Sp<br>Density(dBı |         | Conclusion |
|-------|---------|-------------------------|---------|------------|
|       | 0       | Fig.4                   | -13.135 | Р          |
| BT-LE | 19      | Fig.5                   | -12.112 | Р          |
|       | 39      | Fig.6                   | -12.144 | Р          |

Test figure as below:

#### Report No.: I18D00210-SRD02

Date: 29.0CT.2018 05:08:04

Date: 29.0CT.2018 05:10:43

Fig.6 Power spectral density: CH39

#### 6.3. 6dB Bandwidth

#### 6.3.1 Measurement Limit:

| Standard                       | Limit |
|--------------------------------|-------|
| FCC 47 CFR Part 15.247 (a) (1) | ≥500k |

#### 6.3.2 Test procedures

The measurement is according to ANSI C63.10 clause 11.8.

- 1. The output power of EUT was connected to the spectrum analyzer. The path loss was compensated to the results for each measurement.
- 2. Enable EUT transmitter maximum power continuously.
- 3. Set RBW = 100 kHz.
- 4. Set the VBW  $\geq$  [3  $\times$  RBW].
- 5. Detector = peak.
- 6. Trace mode = max hold.
- 7. Sweep = auto couple.
- 8. Allow the trace to stabilize.
- 9. Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

#### **Measurement Result:**

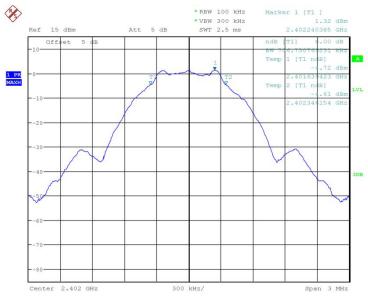

#### For GFSK

| Channel | 6dB Bandv | Conclusion |   |
|---------|-----------|------------|---|
| 0       | Fig.7     | Fig.7 707  |   |
| 19      | Fig.8     | 712        | Р |
| 39      | Fig.9     | 716        | Р |

Conclusion: PASS Test graphs as below:

#### Report No.: I18D00210-SRD02

Date: 29.0CT.2018 05:00:02

Fig.7 6dB Bandwidth: Ch0

Date: 29.0CT.2018 05:00:35

## 6.4. Frequency Band Edges-Conducted

#### 6.4.1 Measurement Limit:

| Standard                  | Limited(dBc) |
|---------------------------|--------------|
| FCC 47 CFR Part 15.247(d) | >20          |

#### 6.4.2 Test procedure

The measurement is according to ANSI C63.10 clause 11.13.2

1) Span: Wide enough to capture the peak level of the emission operating on the channel closest to the band edge, as well as any modulation products that fall outside of the authorized band of operation.

2) Reference level: As required to keep the signal from exceeding the maximum instrument input mixer level for linear operation. In general, the peak of the spectral envelope shall be more than [10 log (OBW/RBW)] below the reference level. Specific guidance is given in 4.1.5.2.

3) Attenuation: Auto (at least 10 dB preferred).

4) Sweep time: Coupled.

5) Resolution bandwidth: 100 kHz.6) Video bandwidth: 300 kHz.7) Detector: Peak.8) Trace: Max hold..

#### 6.4.3 Measurement results For GFSK

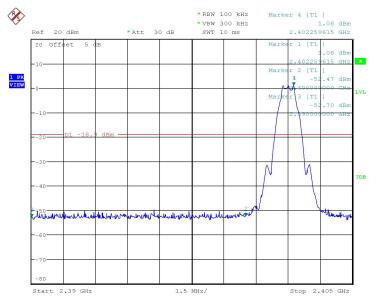

Report No.: I18D00210-SRD02

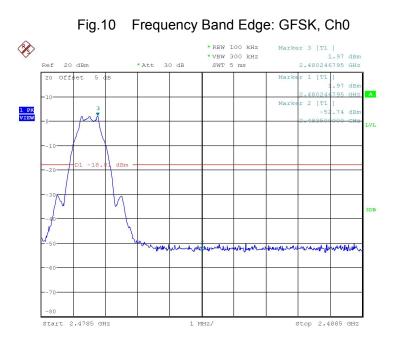

| Channel | Band Edge Power (dBc) | Conclusion |
|---------|-----------------------|------------|

Date: 12.NOV.2018 04:20:09

#### 6.5. Conducted Emission

#### 6.5.1 Measurement Limit:

| Standard                  | Limit                                  |  |
|---------------------------|--|--|
| FCC 47 CFR Part15.247 (d) | 20dB below peak output power in 100KHz |  |
|                           | bandwidth                              |  |

#### 6.5.2 Test procedures

This measurement is according to ANSI C63.10 clause 11.11.

- 1. The output power of EUT was connected to the spectrum analyzer. The path loss was compensated to the results for each measurement.
- 2. Enable EUT transmitter maximum power continuously.

Reference level measurement

- 3. Set instrument center frequency to DTS channel center frequency.
- 4. Set the span to  $\geq$  1.5 times the DTS bandwidth.
- 5. Set the RBW = 100 kHz.
- 6. Set the VBW  $\geq$  [3  $\times$  RBW].
- 7. Detector = peak.
- 8. Sweep time = auto couple.
- 9. Trace mode = max hold.
- 10. Allow trace to fully stabilize.
- 11. Use the peak marker function to determine the maximum PSD level.

Emission level measurement

- 12. Set the center frequency and span to encompass frequency range to be measured.
- 13. Set the RBW = 100 kHz.
- 14. Set the VBW  $\geq$  [3  $\times$  RBW].
- 15. Detector = peak.
- 16. Sweep time = auto couple.
- 17. Trace mode = max hold.
- 18. Allow trace to fully stabilize.
- 19. Use the peak marker function to determine the maximum amplitude level.

#### 6.6. Radiated Emission

#### 6.6.1 Measurement Limit:

|--|

Report No.: I18D00210-SRD02

FCC 47 CFR Part 15.247, 15.205, 15.209

20dB below peak output power

In addition, radiated emissions which fall in the restricted bands, as defined in 15.205(a), must also comply with the radiated emission limits specified in 15.209(a) (see 15.205(c)). **Limit in restricted band:** 

| Frequency of emission<br>(MHz) | Field strength (uV/m) | Field strength (dBuV/m) |
|--------------------------------|-----------------------|-------------------------|
| 30~88                          | 100                   | 40                      |
| 88~216                         | 150                   | 43.5                    |
| 216~960                        | 200                   | 46                      |
| Above 960                      | 500                   | 54                      |

#### 6.6.2 Test Method

Portable, small, lightweight, or modular devices that may be handheld, worn on the body, or placed on a table during operation shall be positioned on a non-conducting platform, the top of which is 80 cm above the reference ground plane. The preferred area occupied by the EUT arrangement is 1 m by 1.5 m, For emissions testing at or below 1 GHz, the table height shall be 80 cm above the reference ground plane. For emission measurements above 1 GHz, the table height shall be 1.5 m. but it may be larger or smaller to accommodate various sized EUTs. For testing purposes, ceiling- and wall-mounted devices also shall be positioned on a tabletop (see also ANSI C63.10-2013 section 6.3.4 and 6.3.5). In making any tests involving handheld, body-worn, or ceiling-mounted equipment, it is essential to recognize that the measured levels may be dependent on the orientation (attitude) of the three orthogonal axes of the EUT. Thus, exploratory tests as specified in 8.3.1 shall be carried out for various axes orientations to determine the attitude having maximum or near-maximum emission level.

The EUT was placed on a non-conductive table. The measurement antenna was placed at a distance of 3 meters from the EUT. During the tests, the antenna height and the EUT azimuth were varied in order to identify the maximum level of emissions from the EUT. This maximization process was repeated with the EUT positioned in each of its three orthogonal orientations.

| Frequency of emission<br>(MHz) | RBW/VBW       | Sweep Time (s) |
|--------------------------------|---------------|----------------|
| 30~1000                        | 100KHz/300KHz | 5              |
| 1000~4000                      | 1MHz/3MHz     | 15             |
| 4000~18000                     | 1MHz/3MHz     | 40             |
| 18000~26500                    | 1MHz/3MHz     | 20             |

#### 6.6.3 Measurement Results:

#### Report No.: I18D00210-SRD02

A "reference path loss" is established and  $A_{Rpi}$  is the attenuation of "reference path loss", and including the gain of receive antenna, the gain of the preamplifier, the cable loss. The measurement results are obtained as described below:

A<sub>Rpi</sub> = Cable loss + Antenna Gain-Preamplifier gain

Result=P<sub>Mea</sub> + A<sub>Rpi</sub>

## 6.7. AC Powerline Conducted Emission

#### Method of Measurement: See ANSI C63.10-2013-clause 6.2

- 1 The one EUT cable configuration and arrangement and mode of operation that produced the emission with the highest amplitude relative to the limit is selected for the final measurement, while applying the appropriate modulating signal to the EUT.
- 2 If the EUT is relocated from an exploratory test site to a final test site, the highest

emissions shall be remaximized at the final test location before final ac power-line conducted emission measurements are performed.

- 3 The final test on all current-carrying conductors of all of the power cords to the equipment that comprises the EUT (but not the cords associated with other non-EUT equipment in the system) is then performed for the full frequency range for which the EUT is being tested for compliance without further variation of the EUT arrangement, cable positions, or EUT mode of operation.
- If the EUT is comprised of equipment units that have their own separate ac power connections, e.g., floor-standing equipment with independent power cords for each shelf that are able to connect directly to the ac power network, each current-carrying conductor of one unit is measured while the other units are connected to a second (or more) LISN(s). All units shall be separately measured. If a power strip is provided by the manufacturer, to supply all of the units making up the EUT, only the conductors in the power cord of the power strip shall be measured.

If the EUT uses a detachable antenna, these measurements shall be made with a suitable dummy load connected to the antenna output terminals; otherwise, the tests shall be made with the antenna connected and, if adjustable, fully extended. When measuring the ac conducted emissions from a device that operates between 150 kHz and 30 MHz a

non-detachable antenna may be replaced with a dummy load for the measurements within the fundamental emission band of the transmitter, but only for those measurements.36 Record the six highest EUT emissions relative to the limit of each of the current-carrying conductors of the power cords of the equipment that comprises the EUT over the frequency range specified by the procuring or regulatory agency. Diagram or

photograph the test setup that was used. See Clause 8 for full reporting requirements.

#### Test Condition:

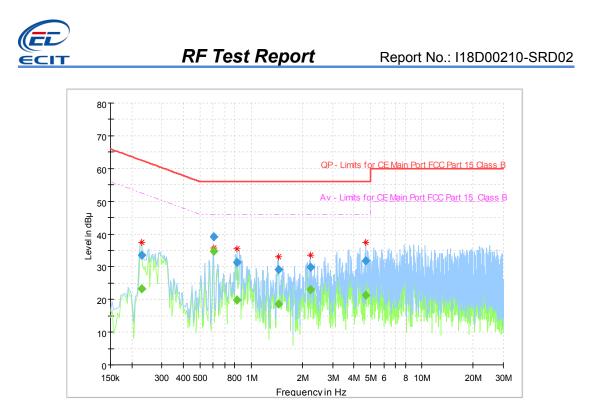

| Voltage (V) | Frequency (Hz) |
|-------------|----------------|
| 120         | 60             |

#### Measurement Result and limit:

(Quasi-peak-average Limit)

| Frequency range<br>(MHz)   | Quasi-peak<br>Limit (dBμV) | Average Limit<br>(dBμV) | Result (dBμV)<br>With charger | Conclusion |
|--|----------------------------|-------------------------|-------------------------------|------------|
|  |                            |                         | BLE                           |            |
| 0.15 to 0.5  | 66 to 56                   | 56 to 46                |                               |            |
| 0.5 to 5   | 56                         | 46                      | Fig.26                        | Р          |
| 5 to 30  | 60                         | 50                      |                               |            |
| NOTE: The limit decreases linearly with the logarithm of the frequency in the range 0.15 MHz |                            |                         |                               |            |
| to 0.5 MHz.  |                            |                         |                               |            |

#### Conclusion: Pass

#### Anechoic chamber

Fully anechoic chamber by Frankonia German.

## 8. Test Environment

**Shielding Room1** (6.0 meters×3.0 meters×2.7 meters) did not exceed following limits along the conducted RF performance testing:

| Temperature              | Min. = 15 ℃, Max. = 35 ℃ |
|--------------------------|--------------------------|
| Relative humidity        | Min. = 20 %, Max. = 75 % |
| Shielding effectiveness  | > 100 dB                 |
| Ground system resistance | < 0.5                    |

Control room did not exceed following limits along the EMC testing:

| Temperature              | Min. = 15 ℃, Max. = 35 ℃ |
|--------------------------|--------------------------|
| Relative humidity        | Min. =25 %, Max. = 75 %  |
| Shielding effectiveness  | > 100 dB                 |
| Electrical insulation    | > 10 k                   |
| Ground system resistance | < 0.5                    |

**Fully-anechoic chamber1** (6.9 meters×10.9 meters×5.4 meters) did not exceed following limits along the EMC testing:

| Temperature                  | Min. = 15 ℃, Max. = 35 ℃                   |
|------------------------------|--|
| Relative humidity            | Min. = 25 %, Max. = 75 %                   |
| Shielding effectiveness      | > 100 dB                                   |
| Electrical insulation        | > 10 k                                     |
| Ground system resistance     | < 0.5                                      |
| VSWR                         | Between 0 and 6 dB, from 1GHz to 18GHz     |
| Site Attenuation Deviation   | Between -4 and 4 dB,30MHz to 1GHz          |
| Uniformity of field strength | Between 0 and 6 dB, from 80MHz to 3000 MHz |

## ANNEX A. Deviations from Prescribed Test Methods

No deviation from Prescribed Test Methods.
