Test Data Reuse Justification Letter

Between QTLRM-844 and QTLRM-852

This is to clarify why test data are reused between QTLRM-844 and QTLRM-852.

QTLRM-852 has dual SIM but no WLAN. QTLRM-844 has single SIM and WLAN. In all other aspects, the two devices are similar.

The WLAN functionality has been removed from RM-852 by not installing the components. The dual SIM functionality has been removed from RM-844 by not installing the second SIM reader on the PWB. The presence of the dual SIM reader is unlikely to have any measureable effect on the radiated performance of the phone.

Both devices have undergone sufficient number of radiated tests. The rest of the results were copied from device to another, see details in the test reports.
