Maximum Permissible Exposure (MPE) Evaluation Report

Report No. : EME-031084

Model No. : WLC-101M

Issued Date : Oct. 24, 2003

Applicant: Cellvision Systems Inc.

18F-7, No. 79 Sec. 1, Hsin Taiwu Road Hsichih,

Taipei, Taiwan

Test By : Intertek Testing Services Taiwan Ltd.

No. 11, Lane 275, Ko-Nan 1 Street, Chia-Tung Li, Shiang-Shan District, Hsinchu City, Taiwan

This test report consists of 6 pages in total. It may be duplicated completely for legal use with the allowance of the applicant. It shall not be reproduced except in full, without the written approval of ITS Laboratory. The test result in this report only applies to the tested sample.

1. Introduction

The EUT operates in the 2.4GHz ISM band. Due to the EUT (include antenna) at its normal operation distance is at least 20 cm from the human body, the EUT was defined as a Mobile Device.

The reason to do the MPE Evaluation is to avoid the RF hazard to human body. The maximum output power and gain of the antenna were used to calculate the limited Power density (S) at 20cm distance away from the product. The limit for Maximum Permissible Exposure (MPE) specified in FCC 1.1310 is followed.

2. RF Exposure Limit

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in 1.1307(b).

Limits for Maximum Permissible Exposure (MPE)

| Frequency Range (MHz) | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm ²) | Average Time (minutes) | | |
|---|-------------------------------------|-------------------------------------|-------------------------------------|------------------------|--|--|
| (A) Limits for Occupational / Control Exposures | | | | | | |
| 30-300 | 61.4 | 0.163 | 1.0 | 6 | | |
| 300-1500 | - | - F/300 | | 6 | | |
| 1500-100,000 | - | - 5 | | 6 | | |
| (B) Limits for General Population / Uncontrolled Exposure | | | | | | |
| 30-300 | 27.5 | 0.073 | 0.2 | 30 | | |
| 300-1500 | - | - | F/1500 | 30 | | |
| 1500-100,000 | - | - | 1.0 | 30 | | |

F= Frequency in MHz

3. RF Exposure calculations

From $\$ FCC 1.1310 table 1, the maximum permissible RF exposure for an uncontrolled environment is $1 \text{mW/(cm}^2)$ Power density (S) is calculated by the following formula:

$$S = (P * G)/4\pi R^2$$

where, $S = Power density (mW/cm^2)$

P = Output power to antenna (mW)

R = Distance between radiating structure and observation point (cm)

G = Gain of antenna in numeric

 $\pi = 3.1416$

Example:

Assume a mobile device operates at 2412MHz and its maximum output power is 50mW, and the maximum gain of antenna is 1 (numeric) /0dBi.

then the power density (S) = $(50 * 1)/4*\pi*20^2 = 0.00995 \text{ (mW/cm}^2)$

FCC ID.: QTRWLC10002 Report No.: EME-031084

4. Test results

The EUT can be equipped with three kinds of antenna. The tests are based on the module with antenna separated. And the combinations are listed as below:

Item Type of EUT Definition in this report Antenna Gain

Module with Dipole antenna antenna 1/ antenna 2 2.15dBi
Module with PIFA antenna antenna 3 -2dBi

For Antenna 1/ Antenna 2:

| | Channel | Maximum | Output power | Power density | Limit of |
|---------|-----------|--------------|--------------|-----------------------|---------------|
| Channel | Frequency | antenna gain | to antenna | | power density |
| | (MHz) | (numeric) | (mW) | (mW/cm ²) | (mW/cm^2) |
| 1 | 2412 | 1.64 | 48.195 | 0.01573 | 1.0 |
| 6 | 2437 | 1.64 | 48.195 | 0.01573 | 1.0 |
| 11 | 2462 | 1.64 | 41.976 | 0.01370 | 1.0 |

For Antenna 3:

| | Channel | Maximum | Output power | Power density | Limit of |
|---------|-----------|--------------|--------------|-----------------------|-----------------------|
| Channel | Frequency | antenna gain | to antenna | | power density |
| | (MHz) | (numeric) | (mW) | (mW/cm ²) | (mW/cm ²) |
| 1 | 2412 | 0.63 | 48.195 | 0.00605 | 1.0 |
| 6 | 2437 | 0.63 | 48.195 | 0.00605 | 1.0 |
| 11 | 2462 | 0.63 | 41.976 | 0.00257 | 1.0 |

The Notice in Installation Manual has been stated as below:

While installing and operating this transmitter, the radio frequency exposure limit of 1mW/(cm*cm) may be exceeded at distances close to the transmitter, therefore, the user must maintain a minimum distance of 20 cm from the device at all time.
