

1. Fall Detection Unit Operational Instructions

The HomeFree system was designed to monitor special needs and Dementia individuals in the care center environment. The Fall Detection Unit is one of the many unique elements of this system.

The Fall Detection Unit is a small, battery operated device, connected to a chair or bed monitoring mat, that can be used to notify care center staff members whenever the resident gets out of the chair or bed. The Fall Detection Unit is positioned on the chair or at the bedside. **The Fall Detection Unit is not for use outside the monitored area.**
