GENERAL REMARKS

The attached report shall not be reproduced except in full without the written permission of Timco Engineering Inc.

Summary

The device under test does;

Fulfill the general approval requirements as identified in this test report

Not fulfill the general approval requirements as identified in this test report

Attestations

This equipment has been tested in accordance with the standards identified in this test report. To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report.

All instrumentation and accessories used to test products for compliance to the indicated standards are calibrated regularly in accordance with ISO 17025 requirements.

I attest that the necessary measurements were made at:

Timco Engineering Inc. 849 NW State Road 45 Newberry, FL 32669

PERIODIC OPERATION

FCC Rule Part No: 15.231(a)

IC RSS: 210 A1.1.1

Requirements:

The intentional radiator is restricted to the transmission of a control signal such as those used with alarm systems, door openers, remote switches, etc. Continuous transmissions, voice, video and the radio control of toys are not permitted. Data is permitted to be sent with a control signal. The following conditions shall be met to comply with the provisions for this periodic operation:

- (1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.
- (2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.
- (3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.
- (4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm condition
- (5) Transmission of set-up information for security systems may exceed the transmission duration limits in paragraphs (1) and (2) of this section, provided such transmissions are under the control of a professional installer and do not exceed ten seconds after a manually operated switch is released or a transmitter is activated automatically. Such set-up information may include data.

Procedure: ANSI C63.10 § 7.4(e) Compliance for periodic operation

Applicant: ENTERPRISE ELECTRONICS, L.L.C.

FCC ID: QV4-LRL0543 IC: 4545A-LRL0543

DUTY CYCLE

Requirements: There are no requirements for the duty cycle; it is measured to

determine compliance with the periodic operation average emission limits and the automatic transmission on time

requirement.

Procedure: ANSI C63.10 § 7.5 Average value of pulsed emissions

Formula: $\delta (dB) = 20 \log (n_1 t_1 + n_2 t_2 + n_3 t_3) / T$

Where:

δ is the duty cycle correction factor (dB)
T is the pulse width (100 ms period)
t1 is the pulse width of subpulse 1
t2 is the pulse width of subpulse 2
t3 is the pulse width of subpulse 3
n1 is the number of t1 pulses
n2 is the number of t2 pulses
n3 is the number of t3 pulses

Test Data: Calculation of Duty Cycle

| Sub Pulse | Duration (ms) | Number (n) | On Time (ms) |
|-----------|---------------|--------------------|--------------|
| 1 | 34.685 | 1 | 34.685 |
| | - | Total On Time (ms) | 34.685 |
| | | Period (ms) | 100 |
| | | Duty Cycle (%) | 35% |
| | | Cor Factor (dB) | -9.20 |

See the following plots.

RADIATION EMISSIONS:

FCC Rules Part No.: 15.231(b), 15.209 (a), 15.205(a)(b)

IC RSS: 210 § A1.1 Table A, RSS-Gen § 8.9, & 8.10

Requirements:

| Fundamental and Harmonics not in Restricted Bands | | | |
|---|-------------------|---------------------------------|--|
| Fundamental | Field Strength of | Field Strength of Harmonics and | |
| Frequency | Fundamental | Spurious Emissions | |
| (MHz) | (dBµV/m) | (dBµV/m @ 3m) | |
| 40.66 to 40.70 | 67.04 | 47.04 | |
| 70 to 130 | 61.94 | 41.94 | |
| 130 to 174 | 61.94 to 71.48 | 41.94 to 51.48 | |
| 174 to 260 | 71.48 | 51.48 | |
| 260 to 470 | 71.48 to 81.94 | 51.48 to 61.94 | |
| 470 and above | 81.94(12500) | 61.94 | |

| Restricted Band Emissions | | | |
|---------------------------|-----------------------------------|--|--|
| Frequency (MHz) | Limits | | |
| 9 – 490 kHz | 2400/F (kHz) μV/m @ 300 meters | | |
| 490 – 1705 kHz | 24000/F (kHz) μV/m @ 30 meters | | |
| 1705 – 30 MHz | 29.54 dBμV/m measured @ 30 meters | | |
| 30 – 88 | 40.0 dBμV/m measured @ 3 meters | | |
| 88 – 216 | 43.5 dBμV/m measured @ 3 meters | | |
| 216 – 960 | 46.0 dBμV/m measured @ 3 meters | | |
| Above 960 | 54.0 dBμV/m measured @ 3 meters | | |

No fundamental frequency is allowed in the restricted bands.

No harmonic or spurious emissions may exceed the level of the fundamental carrier frequency.

Applicant: ENTERPRISE ELECTRONICS, L.L.C.

FCC ID: QV4-LRL0543 IC: 4545A-LRL0543

Report: 522AUT16TestReport_Rev1 Page 11 of 18

RADIATION EMISSIONS:

Fundamental Emission Limit Formula:

- 1) For the band 130-174 MHz, uV/m at 3 meters = 56.81818(F)-6136.3636;
- 2) For the band 260-470 MHz, uV/m at 3 meters = 41.6667(F)-7083.3333.

Where F is the fundamental emission frequency in MHz

Example Calculation of limit @ 433.92 MHz:

41.6667 (433.9) - 7083.3333 = 10,995.85 uV/m

 $20\log (10,995.85) = 80.82 \, dBuV/m$

Harmonics and Spurious Emissions Limit:

- 1) 20 dBc for all emissions outside of restricted bands
- 2) General limits of 15.209(a) & RSS-Gen for emissions inside restricted bands

3 Meter Field Strength Limit for this EUT:

| Fund Freq | Fund Limit | Harm & Spur | Restricted |
|-----------|------------|-------------|-----------------|
| (MHz) | (dBuV/m) | (dBuV/m) | Bands |
| 314.9 | 75.62 | 55.62 | Limit of 15.209 |

Applicant: ENTERPRISE ELECTRONICS, L.L.C.

FCC ID: QV4-LRL0543 IC: 4545A-LRL0543

Report: 522AUT16TestReport_Rev1 Page 12 of 18

RADIATION EMISSIONS:

Test Method: ANSI C63.10 § 6.3 – 6.6 Radiated Emissions Unlicensed Devices

The EUT was placed on a table with dimensions of 1m by 1.5m, 80 cm high below 1 GHz and 150 cm high above 1 GHz. The EUT was placed in the center of the table. The table used for radiated measurements is capable of continuous rotation. The spectrum was scanned from 9 KHz or the lowest frequency generated to the 10th harmonic of the fundamental.

Peak readings were taken in three (3) orthogonal planes when necessary and the highest readings were converted to average readings based on the duty cycle.

When an emission was found, the table was rotated to produce the maximum signal strength. At this point, the antenna was raised and lowered from 1m to 4m. The antenna was placed in both the horizontal and vertical planes.

Formula of Conversion Factors:

The field strength at 3m was established by adding the meter reading of the spectrum analyzer to the antenna correction factor supplied by the antenna manufacturer plus the coax loss. The antenna correction factors are stated in terms of dB/m. The gain of the preselector was accounted for in the spectrum analyzer reading.

Example:

| Freq. | Meter Reading | ACF | Cable Loss | Field Strength |
|-------|---------------|---------|------------|----------------|
| MHz | dΒμV | dB/m | dB | dBµV/m @ 3 m |
| 33 | 20 | + 10.36 | +1.2 | = 31.56 |

Applicant: ENTERPRISE ELECTRONICS, L.L.C.

OCCUPIED BANDWIDTH

FCC Rules Part No.: 15.231(C), & 15.215(c)

IC RSS: 210 § A1.1.3, & GEN § 6.6

Requirements:

The bandwidth of the emission shall fall completely inside the band of operation, and be no wider than .25% of the center frequency for devices operating between 70 and 900 MHz.

For FCC compliance the Bandwidth is determined at the points 20 dB down from the modulated carrier.

For IC compliance the Bandwidth is determined as the 99% power bandwidth.

Test Method: ANSI C63.10 § 6.9.2 Occupied bandwidth Relative procedure

ANSI C63.10 § 6.9.3 Occupied bandwidth 99% Power

Test Data: Occupied Bandwidth Measurement Table

| Tuned Frequency (MHz) | Limit (KHz) | Measured 20 dB BW (KHz) | Measured 99% BW (KHz) | |
