PERIODIC OPERATION

FCC Rule Part No: 15.231(a)

IC RSS: 210 A1.1.1

Requirements:

The intentional radiator is restricted to the transmission of a control signal such as those used with alarm systems, door openers, remote switches, etc. Continuous transmissions, voice, video and the radio control of toys are not permitted. Data is permitted to be sent with a control signal. The following conditions shall be met to comply with the provisions for this periodic operation:

(1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released.

(2) A transmitter activated automatically shall cease transmission within 5 seconds after activation.

(3) Periodic transmissions at regular predetermined intervals are not permitted. However, polling or supervision transmissions, including data, to determine system integrity of transmitters used in security or safety applications are allowed if the total duration of transmissions does not exceed more than two seconds per hour for each transmitter. There is no limit on the number of individual transmissions, provided the total transmission time does not exceed two seconds per hour.

(4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm condition

(5) Transmission of set-up information for security systems may exceed the transmission duration limits in paragraphs (1) and (2) of this section, provided such transmissions are under the control of a professional installer and do not exceed ten seconds after a manually operated switch is released or a transmitter is activated automatically. Such set-up information may include data.

Procedure: ANSI C63.10 § 7.4(e) Compliance for periodic operation

260 to 470	71.48 to 81.94	51.48 to 61.94
470 and above	81.94(12500)	61.94

Restricted Band Emissions	
Frequency (MHz)	Limits
9 – 490 kHz	2400/F (kHz) µV/m @ 300 meters
490 – 1705 kHz	24000/F (kHz) µV/m @ 30 meters

RADIATION EMISSIONS:

Fundamental Emission Limit Formula:

- 1) For the band 130-174 MHz, $\mu\text{V/m}$ at 3 meters = $56.81818(F)-6136.3636$;
- 2) For the band 260-470 MHz, $\mu\text{V/m}$ at 3 meters = $41.6667(F)-7083.3333$.

Where F is the fundamental emission frequency in MHz

Example Calculation of limit @ 433.92 MHz:

$$41.6667 (433.9)-7083.3333 = 10,995.85 \mu\text{V/m}$$

$$20\log (10,995.85) = 80.82 \text{ dBuV/m}$$

Harmonics and Spurious Emissions Limit:

- 1) 20 dBc for all emissions outside of restricted bands
- 2) General limits of 15.209(a) & RSS-Gen for emissions inside restricted bands

3 Meter Field Strength Limit for this EUT:

Fund Freq (MHz)	Fund Limit (dBuV/m)	Harm & Spur (dBuV/m)	Restricted Bands
433.93	80.83	60.83	Limit of 15.209

RADIATION EMISSIONS:

Test Method: ANSI C63.10 § 6.3 – 6.6 Radiated Emissions Unlicensed Devices

The EUT was placed on a table with dimensions of 1m by 1.5m, 80 cm high below 1 GHz and 150 cm high above 1 GHz. The EUT was placed in the center of the table. The table used for radiated measurements is capable of continuous rotation. The spectrum was scanned from 9 KHz or the lowest frequency generated to the 10th harmonic of the fundamental.

Peak readings were taken in three (3) orthogonal planes when necessary and the highest readings were converted to average readings based on the duty cycle.

When an emission was found, the table was rotated to produce the maximum signal strength. At this point, the antenna was raised and lowered from 1m to 4m. The antenna was placed in both the horizontal and vertical planes.

Formula of Conversion Factors:

The field strength at 3m was established by adding the meter reading of the spectrum analyzer to the antenna correction factor supplied by the antenna manufacturer plus the coax loss. The antenna correction factors are stated in terms of dB/m. The gain of the preselector was accounted for in the spectrum analyzer reading.

Example:

Freq. MHz	Meter Reading dBµV	ACF dB/m	Cable Loss dB	Field Strength dBµV/m @ 3 m
33	20	+10.36	+1.2	= 31.56
