Dear Sir or Madam:

We, Load Systems International Inc., hereby declare that product: Pressure Transducer, model: GS035 are electrically identical as model: GS012 (Angle Length Sensor, S/N 26564) tested by Nemko Canada Inc, the results of which are featured in Nemko project: 147585. We declare the GS012 is the worst case regarding EMC/RF tests among the two models.

A description of the differences between the tested model and those that are declared similar are as follows:

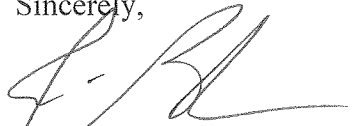

-The input circuit is different on both models:

*GS012 has an angle sensor circuit and a magnet detector circuit used as an encoder for length measurement.
GS035 has an analog circuit for low voltage signal measurement.*

-The GS035 doesn't have additional radiation transmitter components.

-Both models share the same PCB, core circuit, RF transceiver and enclosure.

Sincerely,

Eric Beaulieu / Engineer
