## TO WHOM IT MAY CONCERN

We, Rain Bird Corporation, located at 9491 Ridgehaven Court, San Diego, CA 92123, USA, hereby confirm that our devices ESPBAT-BT1, ESPBAT-BT2, ESPBAT-BT4 and ESPBAT-BT6 are identical in the following aspects:

- a. Same manufacturer
- b. Same factory
- c. Same purpose of use
- d. Same Main Board PCB. However, each SKU is slightly different. Each SKU can drive a different number of irrigation stations. The PCB is the exact same for all SKUs. However, each SKU supports a different number of irrigation stations. Therefore, the components to drive an H-Bridge output are added to increase the number of stations. Each SKU has a master valve H-Bridge output. The BT1 sku has one station of H-Bridge drive. The BT2 has two stations, the BT4 has 4 H-Bridge Drive and the BT6 SKU has 6 stations of drive. The H-Bridge is driven only when the controller operates an irrigation station, up to 8 times per day. Otherwise, the output drive is not operated.
- e. Same Enclosure
- f. Same RF Circuit

They differ from each other only concerning the quantity of irrigation zones that are supposed.

Models	Differences between models
ESPBAT-BT1	Drive components for 1 irrigation zone
ESPBAT-BT2	Drive components for 2 irrigation zones
ESPBAT-BT4	Drive components for 4 irrigation zones
ESPBAT-BT6	Drive components for 6 irrigation zones

Schematic Versions: All the models are based in the same schematic.

a) 1, 2 and 4 irrigation zones are a depopulated version de of the 6 irrigation zones.  
b) The operation modes are the same in all cases
