## ⊘ Installing Program

Take the following steps to install the program used for player memory formatting and firmware upgrade.

1. When you insert an installation CD included in the product package into the CD ROM driver, the InstallShield Wizard will start automatically. Press the [Next] button according to the message displayed on the window to complete program installation.
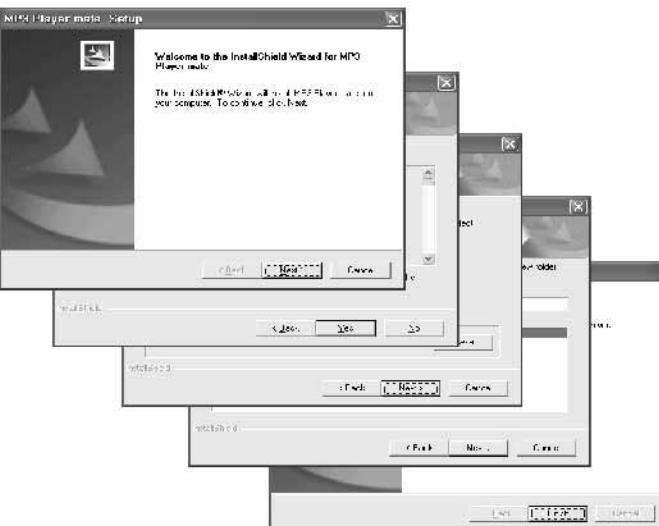

⊘ Installing Program

2. The firmware download and MSCN formatting program will be listed in Start ➡ Programs ➡ MP3 Player mate program group.

⚠ **Caution** ▶ Do not connect the player to the PC before installing the program in Windows 98/SE. The program may not work properly.

⊛ Uninstalling Program

You can uninstall the programs used for formatting and firmware upgrade.

1. Select Start ➡ Programs ➡ MP3 Player mate ➡ Uninstall menu.
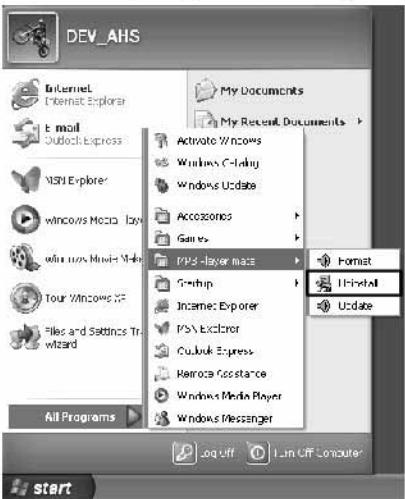

2. Click the [OK] button when the "Confirm Uninstall" dialog box appears.

Confirm Uninstall ⊠

Do you want to completely remove the selected application and all of its components?

OK   Cancel

PC
⚠ **Warning** ▶ Connect the USB cable to the PC after checking the shape of the player's USB connection terminal. If you apply excessive power in inserting the cable, the product or your PC can be damaged seriously.

## Downloading Files

1. Turn the player on and connect to your PC using the USB cable.
2. Wait for a while. Then, the [Removable Disk] item appears in the Explorer folder tree. The saved files will be displayed on the right side window.
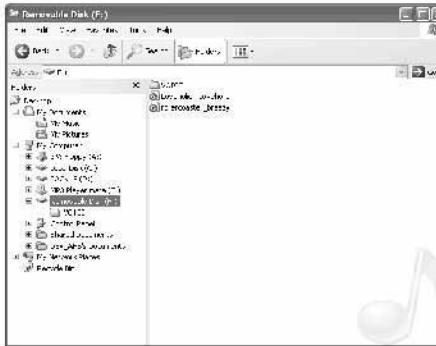

3. Open the folder where you have saved MP3 files and select file(s) to download to the player.
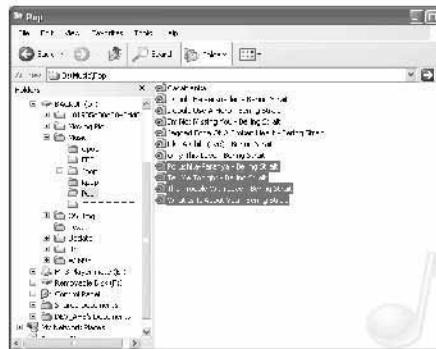

Downloading Files

4. Click with the right mouse button and select the [Copy] pop up menu to download the selected files to the player.
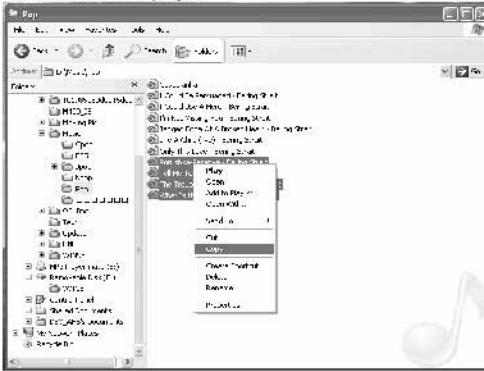

5. Select the [Removable Disk] in the Explorer folder and select the [Paste]. Then, file uploading will be completed.
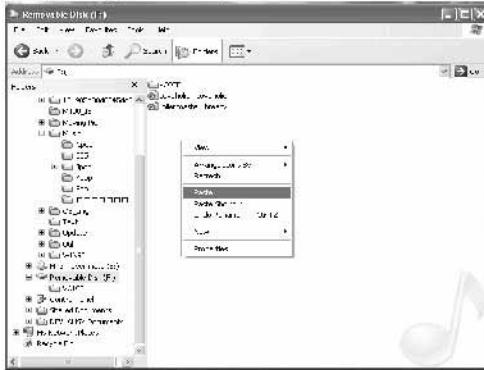

Uploading Files

1. Select the uploading files from the right side window of the Windows Explorer.

2. Click with the right mouse button and select the [Copy] popup menu.
