

**Transmitter Out of Band Radiated Emissions (continued)****Test Summary:**

<b>Test Engineer:</b>	Georgios Vrezas	<b>Test Dates:</b>	03 August 2015 to 05 August 2015
<b>Test Sample Serial Number:</b>	0004565800BC		

<b>FCC Reference:</b>	Parts 15.407(b)(3) & 15.209(a)
<b>Test Method Used:</b>	FCC KDB 789033 Section II.G & ANSI C63.10 Sections 6.3 and 6.6
<b>Frequency Range:</b>	1 GHz to 40 GHz

**Environmental Conditions:**

<b>Temperature (°C):</b>	23 to 25
<b>Relative Humidity (%):</b>	41 to 45

**Note(s):**

- Radiated spurious emissions testing was performed with the EUT transmitting at maximum power on a 5 MHz channel with BPSK modulation. This configuration produced the highest emission levels and was therefore deemed to be worst case. The EUT was transmitting at >99% duty cycle. The highest gain antenna of each antenna type was tested using the appropriate maximum power setting. The 4 foot parabolic antenna was used for tests in the 5.25-5.35 GHz band. The 2 foot parabolic antenna was used for tests in the 5.47-5.725 GHz band
- Pre-scans with the EUT transmitting on the middle channel were performed according to FCC Parts 15.407(b)(2)/15.407(b)(3) which state all emissions outside of the band will not exceed -27 dBm/MHz. Part(b)(7) states the provisions of §15.205 apply, i.e. restricted bands of operation.
- Appropriate RF filters and attenuators were used during pre-scans and final measurements. Insertion losses were entered on the spectrum analyser as RF levels offsets.
- Tests were performed as field strength measurements and any emissions in non-restricted bands converted to an E.I.R.P. value in dBm in accordance with FCC KDB 789033 Section II.G.2 using a conversion factor of 95.2. The measured values incorporates the calibrated antenna factor and cable loss.
- Where the highest levels of emissions or noise floor occurred in a restricted band, the maximum peak field strength level was compared to peak (74 dBµV/m) and average (54 dBµV/m) limits. Where the highest levels of emission or noise floor occurred in a non-restricted band, the maximum field strength was converted to E.I.R.P. and compared to the -27 dBm/MHz E.I.R.P. limit. The -27 dBm/MHz E.I.R.P. limit was converted to a field strength limit of 68.2 dBµV/m at a measurement distance of 3 metres.
- The final measured value, for the given emission, incorporates the calibrated antenna factor, preamplifier gain, attenuator loss and cable loss.
- All other emissions shown on the pre-scan plots were investigated and found to be below the measurement system noise floor or ambient.
- Pre-scans above 1 GHz were performed in a fully anechoic chamber (UL Asset Number K0002) at a distance of 3 metres. The centre point of the EUT antenna was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. The EUT was placed as close to 1.5 metres as the antenna mounting bracket and RF cables allowed. All measurement antennas were placed at a fixed height of 1.5 metres above the test chamber floor, in line with the EUT. Final measurements above 1 GHz were performed in a semi-anechoic chamber (UL Asset Number K0001) at a distance of 3 metres. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

**Transmitter Out of Band Radiated Emissions 5.25-5.35 GHz Band (continued)****Results: Bottom Channel / BPSK / 4' Parabolic Antenna**

Frequency (MHz)	Antenna Polarity	Peak Level (dBm/MHz)	Peak Limit (dBm/MHz EIRP)	Margin (dB)	Result
5467.980	Vertical	-39.6	-27.0	12.6	Complied

**Results: Middle Channel / BPSK / 4' Parabolic Antenna**

Frequency (MHz)	Antenna Polarity	Peak Level (dBm/MHz)	Peak Limit (dBm/MHz EIRP)	Margin (dB)	Result
5468.140	Vertical	-39.3	-27.0	12.3	Complied

**Results: Top Channel / BPSK / 4' Parabolic Antenna**

Frequency (MHz)	Antenna Polarity	Peak Level (dBm/MHz)	Peak Limit (dBm/MHz EIRP)	Margin (dB)	Result
5467.035	Vertical	-38.6	-27.0	11.6	Complied

**5.2.6. Transmitter Band Edge Radiated Emissions (5.25-5.35 GHz Band)****Test Summary:**

<b>Test Engineer:</b>	Georgios Vrezas	<b>Test Dates:</b>	14 October 2015 & 20 October 2015
<b>Test Sample Serial Number:</b>	0004565800D6		

<b>FCC Reference:</b>	Parts 15.407(b)(2) & 15.209(a)
<b>Test Method Used:</b>	ANSI C63.10 Section 6.10 & FCC KDB 789033 Section II.G

**Environmental Conditions:**

<b>Temperature (°C):</b>	24 to 25
<b>Relative Humidity (%):</b>	32 to 40

**Note(s):**

1. All modes were initially tested and BPSK was found to produce the widest bandwidth, band edge tests were performed in this mode. The EUT was transmitting with >99% duty cycle and at maximum power for bottom or top channel according to the antenna being used (refer to Section 4.2 of this test report). All antennas types were tested. The EUT was connected to each antenna using the supplied RF cables.
2. Lower band edge measurements were performed with the EUT transmitting on the bottom channel of the 5.25-5.35 GHz band. The lower band edge plots show a frequency line at 5.15 GHz. A restricted band of operation exists from 4.5 GHz to 5.15 GHz. A peak limit of 74 dB $\mu$ V/m and an average limit of 54 dB $\mu$ V/m applies in the restricted band. Tests were performed as field strength measurements at a measurement distance of 3 metres. Markers were placed on the peak and average traces at 5.15 GHz.
3. Upper band edge measurements were performed with the EUT transmitting on the top channel of the 5.25-5.35 GHz band. The upper band edge plots show an upper band edge frequency line at 5.35 GHz. A restricted band of operation exists from 5.35 GHz to 5.46 GHz. A peak limit of 74 dB $\mu$ V/m and an average limit of 54 dB $\mu$ V/m applies in the restricted band. Tests were performed as field strength measurements at a measurement distance of 3 metres. Markers were placed on the peak and average traces at the band edge frequency of 5.35 GHz.
4. The blue trace on the result plots shows the peak level and the black trace shows the average level.

**5.2.7. Transmitter Band Edge Conducted Emissions (5.47-5.725 GHz Band)****Test Summary:**

<b>Test Engineer:</b>	Georgios Vrezas	<b>Test Dates:</b>	09 September 2015 to 14 October 2015
<b>Test Sample Serial Number:</b>	0004565800E2		

<b>FCC Reference:</b>	Parts 15.407(b)(3) & 15.209(a)
<b>Test Method Used:</b>	ANSI C63.10 Section 6.10, FCC KDB 789033 Section II.G and Notes below

**Environmental Conditions:**

<b>Temperature (°C):</b>	24 to 27
<b>Relative Humidity (%):</b>	36 to 47

**Note(s):**

- Band edge tests were performed as conducted measurements in the operating mode that produced the highest emission levels at band edges. All modes were initially tested and the mode that produced the highest levels was BPSK. The EUT was transmitting with >99% duty cycle and at maximum power for bottom or top channel according to the antenna being used (refer to Section 4.2 of this test report). All antennas types were tested. The test receiver was connected to the RF port on the EUT using a 3 dB attenuator and RF cable. The total attenuation appears on the result plots as an RF level offset.
- Measurements were performed on both RF ports. The results were linearly combined in accordance with FCC KDB 662911 Section E.2(a)(ii). The stated antenna gain was added to the combined conducted emission level and the result was compared with the limit to obtain the margin.
- Lower band edge measurements were performed with the EUT transmitting on the bottom channel. The lower band edge plots show a lower band edge frequency line at 5.47 GHz. A non-restricted band of operation exists adjacent to and below the lower band edge and the general limit of -27 dBm/MHz E.I.R.P. applies. A restricted band of operation exists 10 MHz below the lower band edge at 5.35 GHz to 5.46 GHz. The lower band edge field strength plots show a frequency line at 5.46 GHz and an average trace is shown (the lower of the two traces) with an associated frequency line and marker at 5.46 GHz. Spurious emissions found in the 5.35 GHz to 5.46 GHz restricted band are shown in the Transmitter Out of Band Radiated Emissions section of this test report.
- Upper band edge measurements were performed with the EUT transmitting on the top channel. The upper band edge plots show an upper band edge frequency line at 5.725 GHz. A non-restricted band of operation exists adjacent to and above the upper band edge and the general limit of -27 dBm/MHz E.I.R.P. applies.
- \*In accordance with FCC KDB 789033 Section II.G.3(d)(ii), the integration method was used to show compliance. The channel power function of a test receiver was used to perform the measurements in a 1 MHz bandwidth. The measurement was centred 500 kHz below the lower band edge (5469.5 MHz) and 500 kHz above the upper band edge (5725.5 MHz). The test receiver was left to sweep for a sufficient period of time on MAX HOLD until the emission levels were maximised.
