

In the event that the radio link under consideration did require the use of external higher gain antennas, the VAR would procure these antennas from the Distributor. The list of antennas acceptable to the FCC is contained in the User Manual for the product.

## **2. Requiring Professional Installation**

Orthogon Systems states in the User Manual (Section 5) that only suitably qualified people should undertake the installation of the Spectra Products. As detailed above the product is only sold to Distributors/VAR chains who would hire professional installers.

This would be essential for the connectorised version which would only be used for demanding radio radio links and where a professional and detailed radio survey is essential to ensure that the system will operate as required.

## **3. Application**

The Spectra product is not intended for use by the general public; the application is for industrial/commercial use; a typical example would be to provide inter-site linking of company computer networks by point to point radio.

Yours sincerely

Clem Fisher
