

Attestation

November 5, 2009

Sonicwall model APL21-069 sold in North America and specifically in USA will always use the parameters that comply with FCC rules and are consistent with measured results shown in the reports. North American units have a country selection for USA or Canada. Country selection does change not radio performance or parameters. Country selection is used to provide information to client devices consistent with 802.11d. When shipped as a North American unit the model is hard coded at the factory to accept only North American firmware image and cannot be changed by any user interface. The firmware and hard coding are controlled by Sonicwall Engineering Office in USA.

A handwritten signature in black ink, appearing to read "Rick Linford", is positioned above the typed name.
