## Permissive change request

We hereby ask the R5 SUPREME AIS transponder to be a permissive change to the R5 SOLID AIS. Both product use the R5 AIS radio, and are identical from a radio perspective.

The two main differences between the R5 SOLID AIS and the R5 SUPREME AIS transponder are:

- The R5 SOLID has an integrated display and keyboard, this has been removed on the R5 SUPREME and replaced with a metal front.
- The R5 SOLID and R5 SUPREME have a different set of digital interfaces to external systems.

The two product variants use the same circuit board, with a small difference in mounted components for external interfaces. A detailed description of all differences between the two R5 AIS transponders can be found in:

“7000 118-351,A, R5 Solid and R5 Supreme detailed differences.pdf”

After assessment of the similarities, both the R5 SOLID and the R5 SUPREME have been type approved based on the same set of radio test reports.

Best regards,

Johan Lindborg
