Hello,

The reviewing engineer has one technical request and one fyi. Please forward answer to #1 and I will send the him we will then be ready to grant.

RT questions:

1. Please indicate the analyzer instrument settings (i.e., RBW, VBW, detector, etc.) used to measure the output power.
2. FYI- under the most recent FCC Rules, a Bluetooth device meets the definition of a frequency hopping transmitter in all modes of operation. Thus, it is no longer necessary to conduct power spectral density measurements.
