RE: FCC ID: QYKELBTHS235_ATCB000388

Attention: Elton Chen

I have a few comments on this Application.

1. Please note that the manual is to give rf exposure information on the device. Even though the device is low power, there still needs to be information in the manual stating compliance to rf exposure limits. Please add this statement to your manual.
2. Please note that Bluetooth devices have at least three modes with different dwell times. The typical highest dwell time for Bluetooth devices occurs in DH5 with about 350ms dwell time (worse case). You have reported only on one mode of operation. Please verify that all three modes of operation are in compliance with the dwell time restrictions.
3. FYI - Please note that MPE is not appropriate for portable devices. Still, in the MPE report you incorrectly list 1.183dBm (see page 5 of the MPE report). This should be .73 dBm as in the report.
