This report is governed by, and incorporates by reference, the Conditions of Testing as posted at the date of issuance of this report at <a href="http://www.bureauveritas.com/home/about-us/our-business/cps/about-us/terms-conditions/">http://www.bureauveritas.com/home/about-us/our-business/cps/about-us/terms-conditions/</a> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

|   | Standards:        | 47 CFR FCC Part 15, Subpart C (Section 15.209)<br>ANSI C63.10-2013  |  |  |

The above equipment has been tested by Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's RF characteristics under the conditions specified in this report.

# 2 Summary of Test Results

|            | 47 CFR FCC Part 15, Subpart C (Section 15.209) |      |   |  |  |
|------------|--|------|---|--|--|
| FCC Clause | CC Clause Test Item                            |      | Remarks   |  |  |
| 15.207     | Conducted emission test                        | Pass | Meet the requirement of limit.<br>Minimum passing margin is -4.20 dB at<br>1.10200 MHz. |  |  |
| 15.209     | Radiated emission test                         | Pass | Meet the requirement of limit.<br>Minimum passing margin is -3.5 dB at<br>29.67 MHz.    |  |  |

Note: Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty.

### 2.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

| Measurement                        | Frequency        | Expanded Uncertainty<br>(k=2) (±) |  |  |
|------------------------------------|------------------|-----------------------------------|--|--|
| Conducted Emissions at mains ports | 150 kHz ~ 30 MHz | 2.79 dB                           |  |  |
|                                    | 9kHz ~ 30MHz     | 3.00 dB                           |  |  |
| Radiated Emissions up to 1 GHz     | 30MHz ~ 200MHz   | 2.91 dB                           |  |  |
|                                    | 200MHz ~1000MHz  | 2.93 dB                           |  |  |

# 2.2 Modification Record

There were no modifications required for compliance.

# 3 General Information

# 3.1 General Description of EUT

| Product  | Notebook   |  |
|--|--|--|
| Brand  | Getac  |  |
| Test Model   | V110, V110G7, V110Y (Y= 10 characters, Y can be 0 to 9, A to Z, a to z, "/", "\", "-", "_" or blank for marketing purpose) |  |
| Status of EUT  | Engineering Sample   |  |
| Power Supply Rating 19Vdc from adapter<br>11.1Vdc from battery |  |  |
| Operating Frequency 82 kHz                                     |  |  |
| Antenna Type   | Loop Antenna   |  |
| Antenna Connector  | FFC & FPC Connector  |  |
| Accessory Device   | Refer to Note as below   |  |
| Data Cable Supplied  | Refer to Note as below   |  |

Note:

1. All models are listed as below.

| Product  | Brand | Model  | Difference  |
|----------|-------|--|---|
|          |       | V110   |   |
|          |       | V110G7   | All models are electrically identical different   |
| Notebook | Getac | V110Y (Y= 10 characters, Y can be 0 to 9,<br>A to Z, a to z, "/", "\", "-", "_" or blank for<br>marketing purpose) | All models are electrically identical, different model names are for marketing purpose. |

2. The EUT contains following accessory devices.

| Product          | Brand                  | Model         | Description   |
|------------------|------------------------|---------------|---|

4. The above EUT information is declared by manufacturer and for more detailed features description, please refers to the manufacturer's specifications or user's manual.

5. Only radiated measurements are used to show compliance with FCC limits for fundamental and spurious emission.

 The EUT contains certified WLAN/BT module (Brand: Getac / Model: AX211NGW, FCC ID: QYLAX211NG), and WWAN module (Brand: Getac / Model: LN920A12-WW, FCC ID: QYLLN920V), and RFID module (Brand: NXP / Model: PN-7462, FCC ID: QYLV110NXP).

#### 3.2 **Description of Test Modes**

1 channel is provided to this EUT:

| Channel | Frequency (kHz) |
|---------|-----------------|
| 1       | 82              |

#### 3.2.1 Test Mode Applicability and Tested Channel Detail

| EUT Configure | Applic   | able To      | Description                        |
|---------------|--|--------------|------------------------------------|
| Mode          | RE<1G  |              |                                    |
| -             | $\checkmark$                                       | $\checkmark$ | -                                  |
| Where         | ere <b>RE&lt;1G:</b> Radiated Emission below 1 GHz |              | PLC: Power Line Conducted Emission |

### Radiated Emission Test (Below 1 GHz):

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Available Channel | Tested Channel |  |
|--------------------|-------------------|----------------|--|
| -                  | 1                 | 1              |  |

#### **Power Line Conducted Emission Test:**

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates and antenna ports (if EUT with antenna diversity architecture).

Following channel(s) was (were) selected for the final test as listed below.

| EUT Configure Mode | Available Channel | Tested Channel |  |  |
|--------------------|-------------------|----------------|--|--|
| -                  | 1                 | 1              |  |  |

# **Test Condition:**

| Applicable To | Environmental Conditions | Input Power    | Tested By    |  |
|---------------|--------------------------|----------------|--------------|--|
| RE            | 23 deg. C, 70 % RH       | 120 Vac, 60 Hz | Randy Wu     |  |
| PLC           | 22.7 deg. C, 69.7 % RH   | 120 Vac, 60 Hz | Thomas Cheng |  |

# 3.3 Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

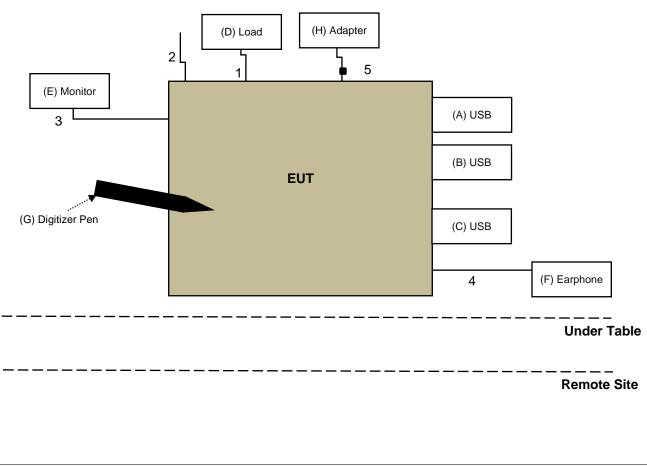

| No. | Product       | Brand                    | Model No.     | Serial No.   | FCC ID |
|-----|---------------|--------------------------|---------------|--------------|--------|
| Α.  | USB           | SanDisk                  | SDDDC3-032G   | N/A          | N/A    |
| В.  | USB           | SanDisk                  | SDDDC3-032G   | N/A          | N/A    |
| C.  | USB           | SanDisk                  | SDDDC3-032G   | N/A          | N/A    |
| D.  | Load          | N/A                      | N/A           | N/A          | N/A    |

Note:

1. All power cords of the above support units are non-shielded (1.8m).

# 3.3.1 Configuration of System under Test

# 3.4 General Description of Applied Standards

The EUT is a RF Product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

# FCC Part 15, Subpart C (15.209)

ANSI C63.10-2013

All test items have been performed and recorded as per the above standards.

# 4 Test Types and Results

# 4.1 Radiated Emission and Bandedge Measurement

4.1.1 Limits of Radiated Emission and Bandedge Measurement

| Frequencies<br>(MHz) | Field Strength<br>(microvolts/meter) | Measurement Distance<br>(meters) |
|----------------------|--------------------------------------|----------------------------------|
| 0.009 ~ 0.490        | 2400/F (kHz)                         | 300                              |
| 0.490 ~ 1.705        | 24000/F (kHz)                        | 30                               |
| 1.705 ~ 30.0         | 30                                   | 30                               |
| 30 ~ 88              | 100                                  | 3                                |
| 88 ~ 216             | 150                                  | 3                                |
| 216 ~ 960            | 200                                  | 3                                |
| Above 960            | 500                                  | 3                                |

### NOTE:

- 1. The lower limit shall apply at the transition frequencies.
- 2. Emission level (dBuV/m) = 20 log Emission level (uV/m).
- 3. For frequencies above 1000 MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20 dB under any condition of modulation.

#### 4.1.2 Test Instruments

| Description &<br>Manufacturer            | Model No.                          | Serial No.  | Date Of<br>Calibration | Due Date Of<br>Calibration |

Note: 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2. The test was performed in WM Chamber 9.

# 4.1.3 Test Procedures

### For Radiated Emission below 30 MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. Parallel, perpendicular, and ground-parallel orientations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Quasi-Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

#### Note:

1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 9 kHz at frequency below 30 MHz.

### For Radiated Emission above 30 MHz

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at 3 meter chamber room for test. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1 GHz.
- f. The test-receiver system was set to peak and average detected function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz. If the peak reading value also meets average limit, measurement with the average detector is unnecessary.

#### Note:

- 1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120 kHz for Quasipeak detection (QP) at frequency below 1 GHz.
- 2. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 3 MHz for Peak detection (PK) at frequency above 1 GHz.
- 3. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is ≥ 1/T (Duty cycle < 98 %) or 10 Hz (Duty cycle ≥ 98 %) for Average detection (AV) at frequency above 1 GHz.
- 4. All modes of operation were investigated and the worst-case emissions are reported.

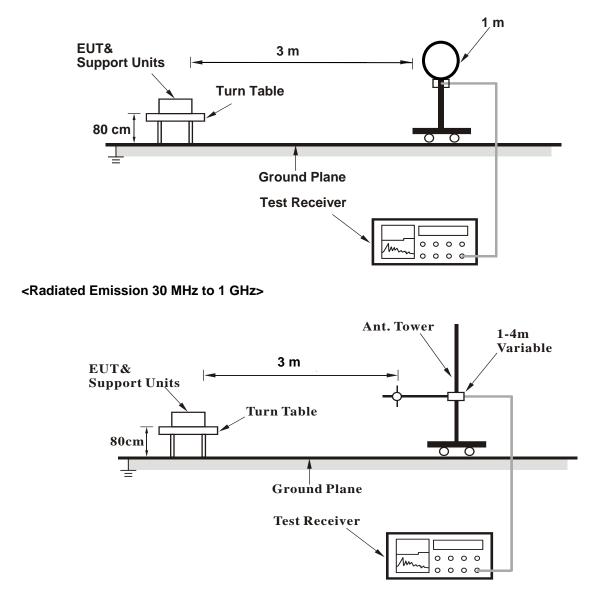

#### 4.1.4 Deviation from Test Standard

No deviation.

#### 4.1.5 Test Setup

#### <Radiated Emission below 30 MHz>

For the actual test configuration, please refer to the attached file (Test Setup Photo).

#### 4.1.6 EUT Operating Conditions

Set the EUT under transmission condition continuously at specific channel frequency.

### 4.1.7 Test Results

| Test Mode       | Tx            |                               |  |  |  |  |  |
|-----------------|---------------|-------------------------------|--|--|--|--|--|
| RF Mode         | RFID          | Channel                       | CH 1:82 kHz                              |  |  |  |  |
| Frequency Range | 9kHz ~ 150kHz | Detector Function & Bandwidth | Quasi-Peak (QP) /<br>Average (AV), 200Hz |  |  |  |  |

|    | Antenna Polarity : Parallel |                               |                   |                |                          |                            |                        |                                |  |
|----|-----------------------------|-------------------------------|-------------------|----------------|--------------------------|----------------------------|------------------------|--------------------------------|--|
| No | Frequency<br>(MHz)          | Emission<br>Level<br>(dBuV/m) | Limit<br>(dBuV/m) | Margin<br>(dB) | Antenna<br>Height<br>(m) | Table<br>Angle<br>(Degree) | Raw<br>Value<br>(dBuV) | Correction<br>Factor<br>(dB/m) |  |
| 1  | 0.082                       | 0.6 QP                        | 49.3              | -48.7          | 1.0                      | 178                        | 20.5                   | -19.9                          |  |
| 2  | 0.082                       | -5.4 AV                       | 29.3              | -34.7          | 1.0                      | 178                        | 14.5                   | -19.9                          |  |

Remarks:

1. Emission Level(dBuV/m) = Raw Value(dBuV) + Correction Factor(dB/m)

2. Correction Factor(dB/m) = Antenna Factor (dB/m) + Cable Factor (dB)

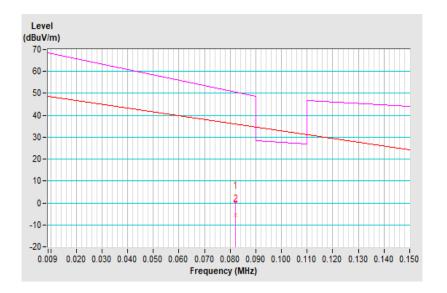

+ Distance conversion factor

3. The other emission levels were very low against the limit.

4. Margin value = Emission Level - Limit value

5. " \* ": Fundamental frequency.

6. For  $0.009 \sim 0.49$ MHz, the measured field strength was extrapolated to distance 300 meters Distance factor@3m =  $40*\log(3/300) = -80$ dB

+ Distance conversion factor

3. The other emission levels were very low against the limit.

4. Margin value = Emission Level – Limit value

5. "\* ": Fundamental frequency.

6. For  $0.009 \sim 0.49$ MHz, the measured field strength was extrapolated to distance 300 meters Distance factor@3m =  $40*\log(3/300) = -80$ dB

1. Emission level (dBuV/m) = Raw Value (dBuV) + Factor (dB/m)

2 The other emission levels were very low against the limit.

3. Margin value = Emission level – Limit value.

4. The factor value already contains the test distance interpolation coefficient.

The measured field strength above 490kHz was extrapolated to distance 30 meters, using the formula that the limit of field strength varies as the inverse distance square (40dB per decade of distance)

| 4  | 559.62   | 38.0 QP                       | 46.0              | -8.0           | 1.01 V                   | 17                         | 44.8                   | -6.8                           |  |
| 5  | 639.16   | 27.9 QP                       | 46.0              | -18.1          | 1.01 V                   | 99                         | 32.6                   | -4.7                           |  |
| 6  | 762.35   | 40.2 QP                       | 46.0              | -5.8           | 1.01 V                   | 2                          | 43.2                   | -3.0                           |  |

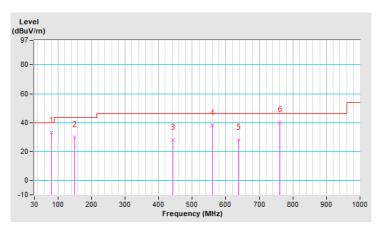

1. Emission Level(dBuV/m) = Raw Value(dBuV) + Correction Factor(dB/m)

2. Correction Factor(dB/m) = Antenna Factor(dB/m) + Cable Factor(dB) – Pre-Amplifier Factor(dB)

3. Margin value = Emission Level – Limit value

4. The other emission levels were very low against the limit of frequency range 30MHz~1000MHz.

5. The emission levels were very low against the limit of frequency range 9kHz~30MHz: the amplitude of spurious emissions attenuated more than 20 dB below the permissible value to be report.

# 4.2 Conducted Emission Measurement

#### 4.2.1 Limits of Conducted Emission Measurement

| Frequency (MHz) | Conducted Limit (dBuV) |         |  |  |  |  |
|-----------------|------------------------|---------|--|--|--|--|
|                 | Quasi-Peak             | Average |  |  |  |  |
| 0.15 - 0.5      | 66 - 56                | 56 - 46 |  |  |  |  |
| 0.50 - 5.0      | 56                     | 46      |  |  |  |  |
| 5.0 - 30.0      | 60                     | 50      |  |  |  |  |

Note:

- 1. The lower limit shall apply at the transition frequencies.
- 2. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50 MHz.
- 3. All emanations from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

#### 4.2.2 Test Instruments

| Description &<br>Manufacturer               | Model No.                | Serial No.     | Date of<br>Calibration | Due Date of<br>Calibration |  |

| Software<br>ADT                             | BV ADT_Cond_<br>V7.3.7.4 | NA             | NA                     | NA                         |  |

Note: 1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

- 2. The test was performed in HwaYa Shielded Room 2 (Conduction 2).
- 3. The VCCI Site Registration No. is C-12047.

# 4.2.3 Test Procedures

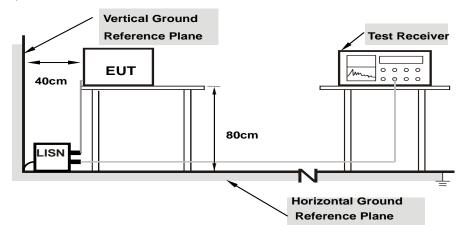

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 ohm/ 50 uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150 kHz to 30 MHz was searched. Emission levels under (Limit 20 dB) was not recorded.
- **NOTE:** The resolution bandwidth and video bandwidth of test receiver is 9 kHz for quasi-peak detection (QP) and average detection (AV) at frequency 0.15 MHz 30 MHz.

# 4.2.4 Deviation from Test Standard

No deviation.

4.2.5 Test Setup

Note: 1.Support units were connected to second LISN.

For the actual test configuration, please refer to the attached file (Test Setup Photo).

4.2.6 EUT Operating Conditions

Same as 4.1.6.

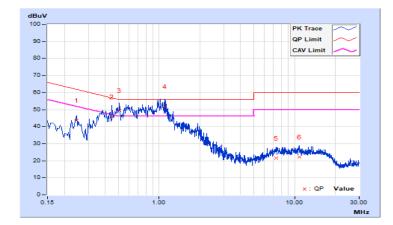

# 4.2.7 Test Results

| RF Mode         | RFID             | Channel  | CH 1:82 kHz                              |

| 3                         | 0.51000   | 10.15                | 39.43 | 29.05          | 49.58                    | 39.20 | 56.00           | 46.00 | -6.42          | -6.80  |
| 4                         | 1.10200   | 10.16                | 41.64 | 27.95          | 51.80                    | 38.11 | 56.00           | 46.00 | -4.20          | -7.89  |
| 5                         | 7.27800   | 10.25                | 11.35 | 4.19           | 21.60                    | 14.44 | 60.00           | 50.00 | -38.40         | -35.56 |
| 6                         | 10.85400  | 10.27                | 12.03 | 6.14           | 22.30                    | 16.41 | 60.00           | 50.00 | -37.70         | -33.59 |

**Remarks:** 

- 1. Q.P. and AV. are abbreviations of quasi-peak and average individually.
- 2. The emission levels of other frequencies were very low against the limit.
- 3. Margin value = Emission level Limit value
- 4. Correction factor = Insertion loss + Cable loss
- 5. Emission Level = Correction Factor + Reading Value

#### Appendix – Information of the Testing Laboratories

We, Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch, were founded in 1988 to provide our best service in EMC, Radio, Telecom and Safety consultation. Our laboratories are FCC recognized accredited test firms and accredited according to ISO/IEC 17025.

If you have any comments, please feel free to contact us at the following:

Lin Kou EMC/RF Lab Tel: 886-2-26052180 Fax: 886-2-26051924 Hsin Chu EMC/RF/Telecom Lab Tel: 886-3-6668565 Fax: 886-3-6668323

Hwa Ya EMC/RF/Safety Lab Tel: 886-3-3183232 Fax: 886-3-3270892

Email: <u>service.adt@tw.bureauveritas.com</u> Web Site: <u>www.bureauveritas-adt.com</u>

The address and road map of all our labs can be found in our web site also.
