Re: RF exposure information for:  
Baha®5  
FCC ID QZ3BAHA5

To Whom It May Concern:

The requirements for determination of compliance and the preparation of an Environmental Assessment regarding human exposure to levels of radiofrequency radiation is regulated in CFR 47 1.1307(b). Such a study is necessary only for facilities, operations and transmitters that fall into the categories listed in table 1 of 1.1307 or those specified in paragraph (b)(2) of the same section.

Baha®5 does not fall into any of the categories listed in 1.1307(b)(2).

Consequently Baha®5 is categorically excluded from making a determination of compliance with the exposure limits in 1.1310 or 2.1093 and preparing eventually an Environmental Assessment.

With reference to "447498 D01 Mobile Portable RF Exposure", Baha®5 is classified as a PORTABLE device and does not allow simultaneous transmission. The average conducted output power is 0.3 mW (worst case) at 2.402 GHz to 2.480 GHz and with a test separation distance of 5 mm, Baha®5 is below the test exclusion thresholds for 1-g SAR, see § 4.3.1 part 1) in 447498 8 D01.

Therefore Baha®5 is considered compliant with the rules for RF exposure without further test or analysis.

Sincerely yours,

Jon Callerfjord  
Director Q&R
