Re: FCC ID: QZC-ELIR1

To Whom It May Concern:

The following Class II Permissive Change application is submitted on behalf of our client, Elster Solutions, LLC, for evaluation of their model ELIR1 for certification under FCC Part 15.247. The purpose of the CIIPC is as follows.

1.1 FW

| Three of the five originally filed modes have been disabled using FW changes only: | | | | | |
|--|------------|-------------|----------|----------|----------|
| | EA Mode | | NGC Mode | | |
| Filing | 35.55 kbps | 142.22 kbps | 50 kbps | 150 kbps | 200 kbps |
| Original | YES | YES | YES | YES | YES |
| Permissive Change | YES | YES | NO | NO | NO |

1.2 HW

- A series antenna-matching component (radiated path only) was changed from 0Ω to 3 pF, C71.
- A series 0Ω in the power supply circuit was changed to a ferrite bead, FB7.
- A ferrite bead was added to pin J1A:10, FB6.
- A nylon standoff was added to support the antenna element, and holes added to the antenna and PCB to captivate the standoff.

The ELIR1 is a wireless light control module containing a frequency hopping spread spectrum (FHSS) radio operating in the 902-928 MHz ISM frequency band.

The output power and radiated spurious measurements were evaluated and was found to be in compliance.

Sincerely,

Sam Wismer
Vice President, Technology
Advanced Compliance Solutions, Inc.
