RE: FCC ID: QZIMBH2BT01
Attention: Keijiro Kumagai / Toyokazu Imamura

I have a few comments on this Application.

1. The report states that this is a professionally installed device (see page 4 or the report). The manual clearly states otherwise. The report states that the antenna is a standard antenna connector. The photos show the device as assembled has no antenna connector (indicating integral antenna). Please correct your documentation to appropriately identify the antenna type and please remove and correct your reference to a professionally installed device (CF cards are not professionally installed devices).
2. Please provide a photo of the antenna that connects to the antenna connector on the card and please show how it is integral or non-standard connection. Please remember that CF cards are not professionally installed and thus can not meet the antenna exception for standard connectors. You must show how the antenna is integral or how it uses a non standard connection.

A handwritten signature in black ink that reads "Dennis Ward".
