SEL-3022 Wireless Channel Attestation

The SEL-3022 communications security device uses an 802.11b wireless interface as a wireless to serial converter. This function is used for remote device status monitoring and settings.

As per the instruction manual, the SEL-3022 utilizes 802.11b channels 1 through 11 in the 2.4GHz band (2.4GHz to 2.462GHz) with a maximum of 11Mbits/sec. SEL does not support the upper 3 channels, 12, 13, or 14.
