# RF Exposure Evaluation declaration

# Product Name : Secure Outdoor Ethernet Radio Link Model No.: ExpWave 240B, GateOne 240B FCC ID.: R3N-GATEONE240B

Applicant : ZyGATE Communications Inc.

Address : 2F No. 48, Lung-Chin Road Lung-Tan, Taoyuan, Taiwan, R.O.C.

| Date of Receipt     | :             | Apr. 21, 2004 |
|---------------------|---------------|---------------|
| Date of Declaration | Apr. 29, 2004 |               |
| Report No.          | :             | 044H050FI     |

The declaration results relate only to the samples calculated.

The declaration shall not be reproduced except in full without the written approval of QuieTek Corporation.

## 1. **RF Exposure Evaluation**

### 1.1. Limits

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b) LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency Range   | Electric Field | Magnetic Field | Power Density | Average Time |
|---|----------------|----------------|---------------|--------------|
| (MHz)   | Strength (V/m) | Strength (A/m) | $(mW/cm^2)$   | (Minutes)    |
| (A) Limits for Occupational/ Control Exposures            |                |                |               |              |
| 300-1500  |                |                | F/300         | 6            |
| 1500-100,000  |                |                | 5             | 6            |
| (B) Limits for General Population/ Uncontrolled Exposures |                |                |               |              |
| 300-1500  |                | F/1500         |               | 6            |
| 1500-100,000  |                |                | 1             | 30           |

F= Frequency in MHz

Friis Formula Friis transmission formula:  $Pd = (Pout*G)/(4*pi*r^2)$ 

Where

 $Pd = power density in mW/cm^2$ 

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd id the limit of MPE,  $1 \text{ mW/cm}^2$ . If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

# **1.2.** Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

The temperature and related humidity: 18°C and 78% RH.

#### **1.3.** Test Result of RF Exposure Evaluation

| Product   | : | Secure Outdoor Ethernet Radio Link                           |
|-----------|---|--|
| Test Item | : | RF Exposure Evaluation                                       |
| Test Site | : | No.1 OATS  |
| Test Mode | : | Mode 1: Secure Outdoor Etherent Radio Link W/Procell Antenna |

#### Antenna Gain

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 8.0dBi or 6.31 in linear scale.

| Channel | Channel Frequency<br>(MHz) | Output Power to Antenna<br>(mW) | Power Density at $R = 20 \text{ cm}$<br>(mW/cm <sup>2</sup> ) |
|---------|----------------------------|---------------------------------|---|
| 1       | 2412.0                     | 24.3781                         | 0.0306  |
| 6       | 2437.0                     | 22.5944                         | 0.0284  |
| 11      | 2462.0                     | 20.7491                         | 0.0260  |

#### Output Power Into Antenna & RF Exposure Evaluation Distance:

The power density Pd (4th column) at a distance of 20 cm calculated from the Friis transmission formula is far below the limit of  $1 \text{ mW/cm}^2$ .

| Product   | : | Secure Outdoor Ethernet Radio Link                         |
|-----------|---|--|
| Test Item | : | RF Exposure Evaluation                                     |
| Test Site | : | No.1 OATS  |
| Test Mode | : | Mode 2: Secure Outdoor Etherent Radio Link W/ZyXEL Antenna |

#### Antenna Gain

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 16.0dBi or 39.81 in linear scale.

#### Output Power Into Antenna & RF Exposure Evaluation Distance:

| Channel | Channel Frequency<br>(MHz) | Output Power to Antenna<br>(mW) | Power Density at $R = 20 \text{ cm}$<br>(mW/cm <sup>2</sup> ) |
|---------|----------------------------|---------------------------------|---|
| 1       | 2412.0                     | 24.3781                         | 0.1931  |
| 6       | 2437.0                     | 22.5944                         | 0.1789  |
| 11      | 2462.0                     | 20.7491                         | 0.1643  |

The power density Pd (4th column) at a distance of 20 cm calculated from the Friis transmission formula is far below the limit of  $1 \text{ mW/cm}^2$ .
