Hi Chris,

Here is the response:

- 1) We have noticed that several Motorola and Nokia models ship with the battery cover on and the FCC ID printed on the box. So the FCC ID is located on the box and under the battery cover. Please ask if this is an option for Firefly.

Best Regards,

**John Huang**  
Mobicom Corp.  
732-772-2233 (Office)  
732-604-0839 (Mobile)  
jzhuang@mobicomcorp.com

- 2) Jim Doudrick will email you The 900MHz and 1800MHz dipole calibrations plots.

Best Regards

Liming

Marianne and Liming, I have reviewed the additional information submitted in response to the Request for Technical information of August 6<sup>th</sup>, 2004 and find that the following still needs to be addressed:

- 1) Previous item number 7 requested clarification for the label location which was provided in the form of a photograph. This photograph seems to show the label inside the phone, which would be covered by an opaque plastic covering. This area does not appear to be a location that would be visible at the time of purchase nor a panel that would be opened to install/remove a battery or SIMM card. Thus this location seems to be one that would not be acceptable to the FCC. Please correct me if I have misunderstood where the label is being placed or the visibility during purchase/use.
- 2) The 900MHz and 1800MHz dipole calibrations were performed in February 2002 (with an indication that calibration was due again in February 2004). Please provide evidence of the dipole's proper calibration for the tests performed in June 2004.

Please contact me if you have any questions.

Best regards,

Chris Harvey
