

#### Inquiry:

A pre-TCB KDB inquiry was submitted to FCC under to request guidance on the fact that the module is apparently too small to include the FCC ID label and information and does not support electronic labeling; therefore the grantee provides the FCC ID in the OEM installation guidance documentation along with instructions to label the host with the FCC ID. The FCC responded that a PBA should be submitted by the TCB. It is not clear to the TCB if the FCC response allows this approach or required electronic labeling as the only alternative to no physical label on the module.

#### **FCC response on 06/14/2012**

At that time the FCC did require TCBs to request PBAs for certain label issues. With the given size of the module, the FCC approves the PBA for the device in question.
