

LETTER OF ARGUMENT

We are writing to inform you we have decided to perform some changes in our device described as follows:

Name: FAMA V3
FCCID: R8T-FAMAV3
Model: FAMAV3

In fact, those changes specifically involve:

- The addition of the GSM/LTE MTSMC-LAT3 module with regard to the hardware part, for GSM only applications.
- A new software version for the GSM/LTE MTSMC-LAT3 module with strictly the same features as for the LoRa SX1272 part. Nevertheless, the two modules never operate at the same time.

No other change has been performed and the antennas remain unchanged.

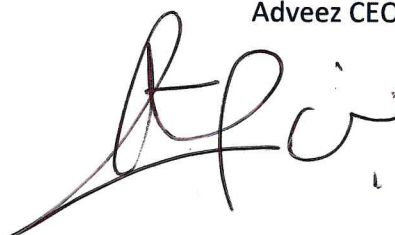

Consequently, FCC/IC certification files will be updated to this end.

This is a C2PC application to accommodate the collocated GSM/LTE module. Collocation calculation has been included in the filing to account for the collocation among different modules

Sincerely

December 18, 2018
