

## **UNII Declaration Letter**

We have declared below	v featured for FCC eq	quipment authorization	n, device FCC ID:R9	C-CPH2387 ,
(1) DFS Device		ent with Radar detecti lar detection capabilit		
(2) Active / Passive Sca	nning , adhoc mode a	access point capabilit	у	
Frequency Band (MHz)	Active Scanning (the device can transmit a probe (beacon))	passive scanning (where the device is can listen only with no probes)	Ad Hoc Mode capability	Access point capability
2412 – 2462 MHz 5150 – 5250 MHz 5250 – 5350 MHz 5470 – 5725 MHz 5725 – 5850 MHz	X Yes,       No         X Yes,       No         Yes,       No         Yes,       No         X Yes,       No	Yes,         No           Yes,         No           Yes,         No           Yes,         No           Yes,         No           Yes,         No	Yes,       No         Yes,       No         Yes,       No         Yes,       No         Yes,       No         Yes,       No	X Yes,       No         X Yes,       No         Yes,       No         Yes,       No         X Yes,       No
(3) Country code selection ability - $\boxtimes$ Yes , $\square$ No If no, pls explain how was implemented : use Microsoft network utility				
<ul> <li>(4) Meet 15.202 requirement -  Yes ,  No , pls check below : <ul> <li>A master device is defined as a device operating in a mode in which it has the capability to transmit without receiving an enabling signal. In this mode it is able to select a channel and initiate a network by sending enabling signals to other devices</li> <li>A client device is defined as a device operating in a mode in which the transmissions of the device are under control of the master. A device in client mode is not able to initiate a network.</li> </ul> </li> <li>(5) For client devices that have software configuration control to operate in different modes (active scanning in some and passive scanning in others) in different bands (devices with multiple equipment classes or those that operate on non-DFS frequencies) or modular devices which configure the modes of operations through software, the application must provide software and operations description on how the software and / or hardware is implemented to ensure that proper operations modes can not be modified by end user or an installer.</li> <li>Apply ,  No Apply .</li> </ul>				
(If apply , pls help to provide e The active or passive mode w switched to passive scanning	explanation on how it was in as controlled by software.			
If you have any question	ns, please feel free to	contact me at the ad	ldress shown below.	
Yours sincerely,				
Signatory
