EXPOSURE TO RADIO WAVES

Your cellphone is a radio transmitter and receiver It is designed and manufactured. Changes or modifications not expressly approved by the party responsible for limits are part of comprehensive guidelines and establish permitted levels of RF NOTE: This equipment has been tested and found to comply with the limits for a person from using it, even with a different SIM card. energy for the general population. The guidelines are based on standards that were Class B digital device pursuant to part 15 of the ECC Rules These limits are designed designed to ensure the safety of all persons, regardless of age and health.

conducted using standard operating positions with the cellphone transmitting at its interference by one or more of the following measures: highest certified power level in all tested frequency bands.

Although the SAR is determined at the highest certified power level, the actual SAR evel of the cellphone while operating can be well below the maximum value. This is - Connect the equipment into an outlet on a circuit different from that to which because the cellphone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a ... Consult the dealer or an experienced radio/TV technician for help wireless base station antenna, the lower the power output of the cellphone. Before Your cellphone is equipped with a built-in antenna. For optimal operation, you should In the United States you may learn more about CTIA's Recycling Program at a cellphone model is available for sale to the public, compliance with national avoid touching it or degrading it. regulations and standards must be shown.

OT-S211A: 1.32 W/kg for use at the ear and 0.87 W/kg for use close to the body. OTV212A: XXX W/kg for use at the ear and XXX W/kg for use close to the hody While there may be differences between the SAR levels of various cellphones and at various positions, they all meet the government requirement for RF exposure. For body-worn operation, the cellphone meets FCC RF exposure guidelines provided that it is used with a non-metallic accessory with the handset at least 2.0 cm from questions you may have the body. Use of other accessories may not ensure compliance with ECC RE exposure guidelines

The World Health Organization (WHO) considers that present scientific information does not indicate the need for any special precautions for use of cellphones. If individuals are concerned, they might choose to limit their own or their children's RF exposure by limiting the length of calls, or using "hands-free" devices to keep cellphones away from the head and body (fact sheet n°193). Additional WHO purchase. information about electromagnetic fields and public health are available on the following website: http://www.who.int/peh-emf.

This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:

- 1) this device may not cause harmful interference and.
- cause undesired operation

developed by independent scientific organizations through periodic and thorough to provide reasonable protection against harmful interference in a residential evaluation of scientific studies. These guidelines include a substantial safety margin installation. This equipment generates, uses and can radiate radio frequency energy and if not in-stalled and used in accordance with the instructions may cause harmful The exposure standard for cellphones employs a unit of measurement known as the interference to radio communications. However, there is no guarantee that Specific Absorption Rate, or SAR, The SAR limit set by public authorities such as the interference will not occur in a particular installation. If this equipment does cause Federal Communications Commission of the US Government (FCC) or by Industry harmful interference to radio or television reception, which can be determined by Canada, is 1.6 W/kg averaged over I gram of body tissue. Tests for SAR are turning the equipment off and on, the user is encouraged to try to correct the Recrient or relocate the receiving antenna

- Increase the separation between the equipment and received
- the receiver is connected.
