Output : 5 V, 500 mA Lithium 750 mAh

#### • RADIO WAVES:

THIS CELLPHONE MEETS THE GOVERNMENT'S REQUIREMENTS FOR EXPOSURE TO RADIO WAVES.

Your cellphone is a radio transmitter and receiver, It is designed and manufactured not to exceed the emission limits for exposure to radio-frequency (RF) energy. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough avaluation of scientific studies. These guidelines include a substantial safety margin designed to ensure the safety of all persons, regardless of age and health.

The exposure standard for cellphones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by public authorities such as the Federal Communications Commission of the US Government (FCC), or by Industry Canada, is 1.6 W/kg averaged over 1 gram of body tissue. Tests for SAR are onducted using standard operating positions with the cellphone transmitting at its This symbol on your cellphone, the battery and the accessories means highest certified power level in all tested frequency bands.

> level of the cellphone while operating can be well below the maximum value. This is because the cellphone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a vireless base station antenna, the lower the power output of the cellphone Before Obigo®

a cellphone model is available for sale to the public, compliance with national regulations and standards must be shown.

The highest SAR value for this model cellphone when tested is 1.35 W/Kg for use at the ear and L4W/Kg for use close to the body.

While there may be differences between the SAR levels of various cellphones and at various positions, they all meet the government requirement for RF exposure. For body-worn operation, the cellphone meets ECC RF exposure guidelines provided that it is used with a non-metallic accessory with the handset at least 1.5 cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines The World Health Organization (WHO) considers that present scientific nformation does not indicate the need for any special precautions for use of cellphones. If individuals are concerned, they might choose to limit their own or their children's RF exposure by limiting the length of calls, or using "hands-free" devices to keep cellphones away from the head and body. (fact sheet n°193). Additional WHO information about electromagnetic fields and public health are available on the following website: http://www.who.int/peh-emf.

# Note: This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to part 15 of the ECC Rules These limits are designed to interference to radio communications. However, there is no guarantee that interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by

- one or more of the following measures: Regrient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver

condition that this device does not cause harmful interference.

- Connect the equipment into an outlet on a circuit different from that to which
- the receiver is connected

Consult the dealer or an experienced radio/TV technician for help. Changes or modifications not expressly approved by the party responsible

compliance could void the user's authority to operate the equip For the receiver devices associated with the operation of a licensed radio service
