### · RADIO WAVES

THIS CELLPHONE MEETS THE GOVERNMENT'S REQUIREMENTS FOR EXPOSI IRE TO RADIO WAVES

Your cellphone is a radio transmitter and receiver It is designed and manufactured not to exceed the emission limits for exposure to radio-frequency (RF) energy. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were oped by independent scientific organizations through periodic and thorough (e.g. FM broadcast), they bear the following statement: evaluation of scientific studies. These guidelines include a substantial safety margin esigned to ensure the safety of all persons, regardless of age and health.

The exposure standard for cellphones employs a unit of measurement known as the For other devices, they bear the following statement: Specific Absorption Rate, or SAR. The SAR limit set by public authorities such as the This device complies with Part 15 of the FCC Rules. Operation is subject to the use damaged batteries or those not recommended by TCT Mobile Limited and/or its Federal Communications Commission of the US Government (FCC), or by Industry following two condition Canada, is 1.6 W/kg averaged over 1 gram of body tissue. Tests for SAR are (1) this device may not cause harmful interference conducted using standard operating positions with the cellphone transmitting at its (2) this device must accept any interference received, including interference that highest certified power level in all tested frequency bands.

that these products must be taken to collection points at the end of Although the SAR is determined at the highest certified power level, the actual SAR level of the cellphone while operating can be well below the maximum value. This is avoid touching it or degrading it. because the cellphone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output of the cellphone Before a cellphone model is available for sale to the public, compliance with national

regulations and standards must be shown.

The highest SAR value for this model cellphone when tested is:
OT-103A: 1.31W/Kg for use at the ear and 0.97W/Kg for use close to the body. OT-203A: 1.39W/Kg for use at the ear and 0.81W/Kg for use close to the body While there may be differences between the SAR levels of various cellphones and at various positions, they all meet the government requirement for RF exposure. Fo hody-worn operation, the cellphone meets FCC RF exposure guidelines provided that jurisdiction or your region has suitable recycling and collection facilities; instead they it is used with a non-metallic accessory with the handset at least 1.5 cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines The World Health Organization (WHO) considers that present scientific information does not indicate the need for any special precautions for use of CAUTION: RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN cellphones, If individuals are concerned, they might choose to limit their own or their INCORRECT TYPE. DISPOSE OF USED BATTERIES ACCORDING TO THE children's RF exposure by limiting the length of calls, or using "hands-free" devices to keep cellphones away from the head and body (fact sheet n° 193). Additional WHO rmation about electromagnetic fields and public health are available on the following website: http://www.who.int/peh-emf.

Note: This equipment has been tested and found to comply with the limits for a Class R digital device pursuant to part 15 of the ECC Rules These limits are designed to provide reasonable protection against harmful interference in a resideninterference to radio communications. However, there is no guarantee that interference to radio or television reception, which can be determined by turning the equipment off and on the user is encouraged to try to correct the interference by

- one or more of the following measures Regrient or relocate the receiving antenna
- Increase the separation between the equipment and receiver

condition that this device does not cause harmful interference

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help.

On our Internet site, you will find our FAQ (Frequently Asked Questions) section. You can also contact us by e-mail to ask any questions you may have

Your cellphone is a transceiver that operates on GSM networks with 850 and 1900 MHz bands

### Protection against theft (1) For the receiver devices associated with the operation of a licensed radio service

Your cellphone is identified by an IMEI (cellphone serial number) shown on the packaging label and in the product's memory. We recommend that you note the number the first time you use your cellphone by entering \*#06# and keep it in a safe place. It may be requested by the police or your operator if your cellphone is stolen. This number allows your cellphone to be blocked preventing a third person from using it, even with a different SIM card.

### Disclaimer
