Getting started

Removing and installing the back cover

Place the SIM card with the chip facing downwards and slide it into its housing. Make sure that it is correctly inserted. To remove the card, press it and slide it out.

Charging the battery

Connect the battery charger to your cellphone and mains socket

The charging may take about 20 minutes to start if the battery

Be careful not to force the plug into the socket. Make sure the battery is correctly inserted before connecting

the charger. The mains socket must be near to the cellphone and easily

accessible (avoid electric extension cables). When using your cellphone for the first time, charge the

battery fully (approximately 3 hours). You are advised to fully charge the battery ()).

To reduce power consumption and energy waste, when battery is fully charged, disconnect your charger from the plug; reduce the backlight time, etc.

The charge is complete when the animation stops.

2.2 Power on your cellphone

Hold down the ⁹ V key until the cellphone powers on.

2.3 Power off your cellphone

Hold down the weight key from the main screen.

Telephone warranty

Your cellphone is warranted against any defect or malfunctioning which may occur in conditions of normal use during the warranty period of twelve (12) months (1) from the date of purchase as shown on your original invoice.

Batteries (2) and accessories sold with your cellphone are also warranted against any defect which may occur during the first six (6) months (1) from the date of purchase as shown on your

In case of any defect of your cellphone which prevents you from normal use thereof, you must immediately inform your vendor and present your cellphone with your proof of purchase.

If the defect is confirmed, your cellphone or part thereof will be either replaced or repaired, as appropriate, Repaired cellphone and accessories are entitled to a one (I) month warranty for the same defect. Repair or replacement may be carried out using reconditioned components offering equivalent functionality.

This warranty covers the cost of parts and labor but excludes any other costs.

(1) The warranty period may vary depending on your country.

(2) The life of a rechargeable cellphone battery in terms of conversation time standby time, and total service life, will depend on the conditions of use and network configuration. Batteries being considered expendable supplies, the specifications state that you should obtain optimal performance for your cellphone during the first six months after purchase and for approximately 200 more recharges.

Safety and use

The manufacturer disclaims any liability for damage which may result as a sea air etc.). The manufacturer's recommended operating temperature range is consequence of improper use or use contrary to the instructions contained -10°C (14°F) to +55°C (131°F) (the max value depends on device, materials and

5 V 350/400 mA Lithium 500 mAh

· RADIO WAVES

THIS CELLPHONE MEETS THE GOVERNMENT'S REQUIREMENTS FOR **EXPOSURE TO RADIO WAVES**

Your cellphone is a radio transmitter and receiver It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. These guidelines include a substantial safety margin designed to ensure the safety of all persons, regardless of age and health.

The exposure standard for cellphones employs a unit of measurement known as the Specific Absorption Rate, or SAR.The SAR limit set by public authorities such as the Federal Communications Commission of the US Governmen (FCC), or by Industry Canada, is 1.6 W/kg averaged over 1 gram of body tissue. Tests for SAR are conducted using standard operating positions with the cellphone transmitting at its highest certified power level in all tested frequency

Although the SAR is determined at the highest certified nower level the actual SAR level of the cellphone while operating can be well below the maximum levels so as to use only the power required to reach the network. In general. the closer you are to a wireless base station antenna, the lower the power output of the cellphone Before a cellphone model is available for sale to the public, compliance with national regulations and standards must be shown The highest SAR value for this model cellphone when tested is 1.05 W/Kg for use at the ear and 1.15 W/Kg for use close to the body.

While there may be differences between the SAR levels of various cellphone and at various positions, they all meet the government requirement for RF exposure For hody-worn operation the cellphone meets ECC RF exposure guidelines provided that it is used with a non-metallic accessory with the dset at least 1.5 cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

The World Health Organization (WHO) considers that present scientific information does not indicate the need for any special precautions for use of cellphones. If individuals are concerned, they might choose to limit their own
