

Multi-Antenna Systems Directional Gain measurement

Report No.: RFBCMA-WTW-P23110753A

FCC ID: RAXWE6204430

Test Model: T-Mobile Internet Wi-Fi Mesh Access Point

Received Date: Nov. 02, 2023

Test Date: Dec. 21, 2023

Issued Date: Jan. 04, 2024

Applicant: Arcadyan Technology Corporation

Address: No. 8, Sec. 2, Guangfu Rd., Hsinchu City 30071, Taiwan, R.O.C.

Issued By: Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch
Lin Kou Laboratories

Lab Address: No. 47-2, 14th Ling, Chia Pau Vil., Lin Kou Dist., New Taipei City, Taiwan

Test Location: No. 19, Hwa Ya 2nd Rd., Wen Hwa Vil., Kwei Shan Dist., Taoyuan City
33383, Taiwan

**FCC Registration /
Designation Number:** 788550 / TW0003

This report is governed by, and incorporates by reference, the Conditions of Testing as posted at the date of issuance of this report at <http://www.bureauveritas.com/home/about-us/our-business/cps/about-us/terms-conditions/> and is intended for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. Measurement uncertainty is only provided upon request for accredited tests. Statements of conformity are based on simple acceptance criteria without taking measurement uncertainty into account, unless otherwise requested in writing. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence or if you require measurement uncertainty; provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents.

2 Conducted Power Measurement

2.1 Test Setup

2.2 Test Instruments

Description & Manufacturer	Model No.	Serial No.	Date of Calibration	Due Date of Calibration
Power Meter Anritsu	ML2495A	1529002	Jun. 16, 2023	Jun. 15, 2024
Pulse Power Sensor Anritsu	MA2411B	1726434	Jun. 19, 2023	Jun. 18, 2024

Note: The calibration interval of the above test instruments is 12 months and the calibrations are traceable to NML/ROC and NIST/USA.

2.3 Test Procedure

Method PM is used to perform output power measurement, trigger and gating function of wide band power meter is enabled to measure max output power of TX on burst and set the detector to average. Duty factor is not added to measured value.

2.4 Test Results of RF Conducted Power

802.11 ax HE20 of Beamforming Mode / Nss=1

Channel	Frequency	Ant 0		Ant 1		Ant 2		Ant 3		Total Conducted Power
		Chain 0		Chain 1		Chain 2		Chain 3		
		(dBm)	(mW)	(dBm)	(mW)	(dBm)	(mW)	(dBm)	(mW)	
6	2437	20.09	102.09	20.05	101.16	20.14	103.28	20.05	101.16	26.10
36	5180	18.81	76.03	19.58	90.78	19.43	87.70	19.04	80.17	25.25
64	5320	17.11	51.40	18.27	67.14	17.78	59.98	17.50	56.23	23.71
100	5500	17.34	54.20	17.93	62.09	17.90	61.66	17.53	56.62	23.70
157	5785	23.57	227.51	23.90	245.47	23.83	241.55	23.63	230.67	29.76

Note:

Total Conducted Power = Chain 0 + Chain 1 + Chain 2 + Chain 3

= Chain 0(mW) + Chain 1(mW) + Chain 2(mW) + Chain 3(mW) = Total Conducted Power(mW)

Total Conducted Power (dBm) = 10 * log (Total conducted power (mW)).

3 3D Antenna Pattern Measurement and Directional gain calculation (Measurement Method and Measurement Environment)

Measurement the EIRP and compare the total conducted power values to calculation the directional gain.

3.1 Test Location

3D Antenna a Pattern Measurement in Fully Anechoic Chamber

3.2 Test Procedure

KDB 662911 D03 MIMO Antenna Gain Measurement v01

ANSI 63.10:2013 – clause 13

KDB 412172 D01 Determining ERP and EIRP v01r01

3.3 Test Setup Diagram @ Fully Anechoic Chamber (Dimension: 12m(L)*7m(W)*7m(H))

The EIRP Pattern measurement is using the conical circle cut test system (refer to Figure 1). The EUT is positioned on center of turntable, for Free Space only in fully anechoic chamber. Data (channel power level) is recorded using the spectrum analyzer for both theta and phi polarizations at each position.

Figure 1. Conical circle cut test system.

Figure 2. Configuration of Conical circle cut test system.

3.4 Test Setup Diagram for EUT

Please refer to report BCMA-WTW-P23120003_Tsup Page 1.

TYPICAL ABSORPTION CHARACTERISTICS (VERTICAL INCIDENCE)

Unit: dB

Material name	30MHz	50MHz	100MHz	500MHz	1GHz	5GHz	18GHz	40GHz
IP-045C	18	18	15	20	20	30	40	40

- Note:
1. The test was performed in HwaYa RF Chamber 1.
 2. The horn antenna and preamplifier (model: 8449B) are used only for the measurement of emission frequency above 1 GHz if tested.

3.6 Test Procedure

- a. Connect EUT to Spectrum Analyzer and record the power setting of EUT and the measured conducted power / conducted power spectral density.
- b. Fasten EUT on the Positioner on center of turntable, for Free Space only.
- c. Configuration EUT transmitting packages (SW: iperf) to the communication emulator in Beamforming mode. Please refer to figure 2 for detail configuration.
- d. Make sure the transmit signal stable and duty cycle greater than or equal to 98% at the maximum RF power level.
- e. Setup the channel power function and power spectral density function by spectrum analyzer.
- f. Read the channel power level and power spectral density level on spectrum analyzer and record in following positions.
 1. The EUT is then stepped between -90 to 90 degrees along the theta axis in 15-degree increments. At each theta position, the phi axis is stepped from 0 to 360 degrees or from 360 to 0 degrees in 15-degree increments.
 2. Data (channel power level / power spectral density level) is recorded using the spectrum analyzer for both theta and phi polarizations at each position.
 3. Set Phi and Theta Positioners to Boresight Phi and Theta angular position of maximum channel power level / power spectral density level.
 4. Fix the Phi angular in Step f.3, the EUT is then stepped between 0 to 360 degrees along the theta axis in 1-degree increments for E-Plane and H-Plane.
 5. Data (channel power level / power spectral density level) is recorded using the spectrum analyzer for both E-Plane and H-Plane at each position, then calculate and indicate the 3-dB beamwidth.
 6. When the 3-dB beamwidth in Step f.5 is less than 15 degree, repeat Step f.1 and Step f.2 with the 1/5/10-degree increments which is less than and close to 3-dB beamwidth.
- g. According to section 2.3 of KDB 412172 D01 Determining ERP and EIRP v01r01, the substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a TX cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Raw Value". Record the power level of S.G.

$$\text{EIRP} = P_{\text{SigGen}} + G_T - L_C$$

where:

P_{SigGen} = power setting of the signal generator that produces the same received power reading as the DUT, in dBm, dBW or psd;

G_T = gain of the substitute antenna, in dBd (ERP) or dBi (EIRP);

L_C = signal loss in the cable connecting the signal generator to the substitute antenna, in dB

- h. Directional Antenna Gain (dBi) = Max EIRP (dBm) – Total Conducted Power (dBm)

3.7 Test Results (Measurement Quantity) of EIRP Measurement & Directional Gain Calculation

Tested By	Jeff Chen
-----------	-----------

EIRP (802.11 ax HE20 of Beamforming Mode / Nss=1)

Mode	Channel	Frequency (MHz)	Polarization	Θ (degree)	Φ (degree)	Raw Value (dBm)	C.F. (dB)	Max EIRP (dBm)
BF (Nss=1)	6	2437	Ver.	45	270	-13.08	44.46	31.38
	36	5180	Ver.	90	0	-18.68	48.63	29.95
	64	5320	Ver.	0	0	-22.06	49.16	27.1
	100	5500	Ver.	0	330	-21.52	49.23	27.71
	157	5785	Ver.	15	330	-17.04	49.93	32.89

Note: Max EIRP (dBm) = Raw Value(dBm) + Correction Factor(dB)
 Correction Factor(dB) = Antenna Gain(dBi) + Cable Loss(dB) + Free Space Loss(dB)
 Peak EIRP measurement values please refer to test plots in Section 3.8.

Directional Gain Calculation (802.11 ax HE20 of Beamforming Mode / Nss=1)

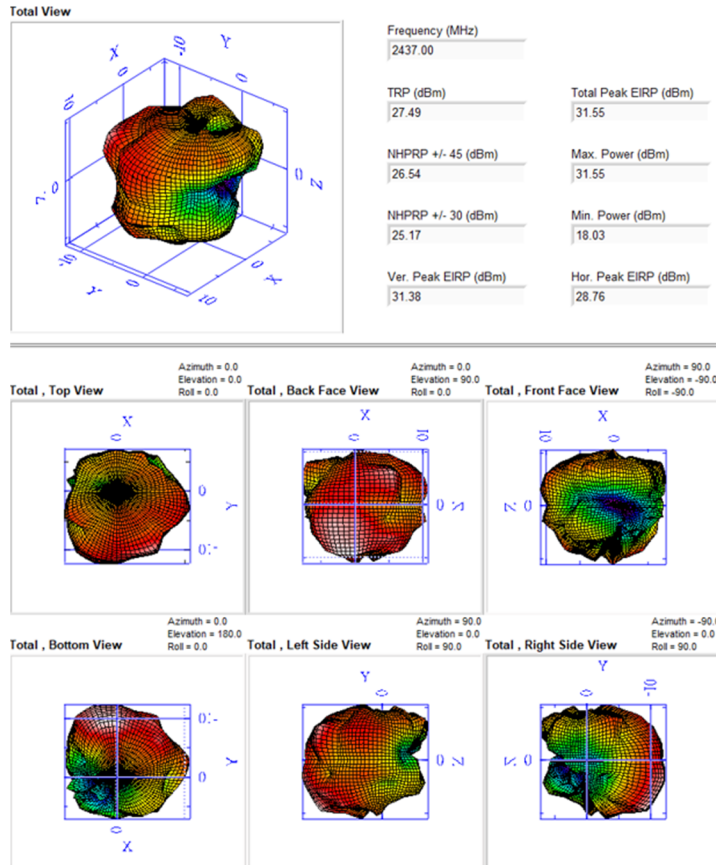

Mode	Channel	Frequency (MHz)	Max EIRP (dBm)	Total Conducted Power (dBm)	Directional Ant. Gain (dBi)
BF (Nss=1)	6	2437	31.38	26.10	5.28
	36	5180	29.95	25.25	4.70
	64	5320	27.10	23.71	3.39
	100	5500	27.71	23.70	4.01
	157	5785	32.89	29.76	3.13

Note: Directional Antenna Gain (dBi) = Max EIRP – Total Conducted Power
