

## **RF Exposure**

### **Applicable Standard**

According to §1.1307(b)(5), systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline. This is a Portable device. **KDB616217 was used as the guidance.**

According to §1.1310 and §2.1093 RF exposure is calculated.

### **Measurement Result (Worse Case):**

This is a Tablet PC and the conducted output power is 10.52dBm (11.27mW), so the EIRP is  $11.27 * 1.622 = 18.280\text{mW}$  which is lower than low threshold  $60/f\text{GHz mW}$  ( $60/2.462\text{GHz} = 24.37\text{mW}$ ), and the antenna is 2.1dBi which is less than 6dBi.

**The SAR measurement is not necessary.**
