

Test Report Cover Letter

Please Note: This document explains the relevance of the test reports included in this application.

This application is based upon a previously certified Modular Device (Murata Manufacturing Co. Model LBEE5ZSTNC, FCCID: VPYLBTN) that is being used in the TransAct Model FST9800, Food Safety Terminal. The antenna used (taoglas #PC11.07.0100A) in the TransAct Terminal is different than that tested with the original Modular Device application. As such, the TUV Test Report # 31451699.006 is used for the radiated emissions with the new antenna. The technical data is reported by the original FCC Test report with its supplementary Test Data Report. Refer to UL Test Report # 31KE0354-HO-01-B-R1 and UL Test report #31KE0354-HO-01-A.

Since TransAct is using the pre-approved module as a component in a its apparatus, a letter from Murata Manufacturing, authorizing TransAct Technologies to use the Test data from the original report is included in this application.
