

Ref: FCCid: RBPMOD280

FCC submission RF exposure information.

Due to the design and installation of the iTerm 280 thermal receipt printer (FCCid:RBPMOD280), it qualifies for the exclusion called out in Federal Communications Commission section 47 CFR § 2.1091 titled "radiofrequency radiation exposure evaluation: mobile devices". The iTerm 280 is a mobile device as defined in section § 2.1091 paragraph (b). Since the transceiver's transmit frequency is above 1.5GHz and its ERP is 0.023mW the iTerm 280 thermal receipt printer is "categorically excluded from routine environmental evaluation" per paragraph (c), and thus SAR evaluation is not required.
